

LEGO 10257

CAROUSEL

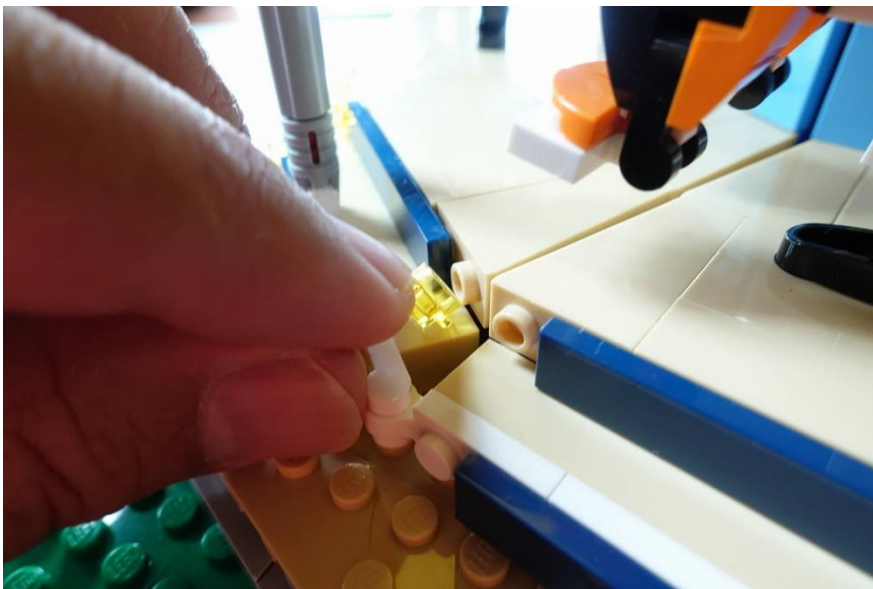

LED Installation Guide

GB GLOW
BRICKS

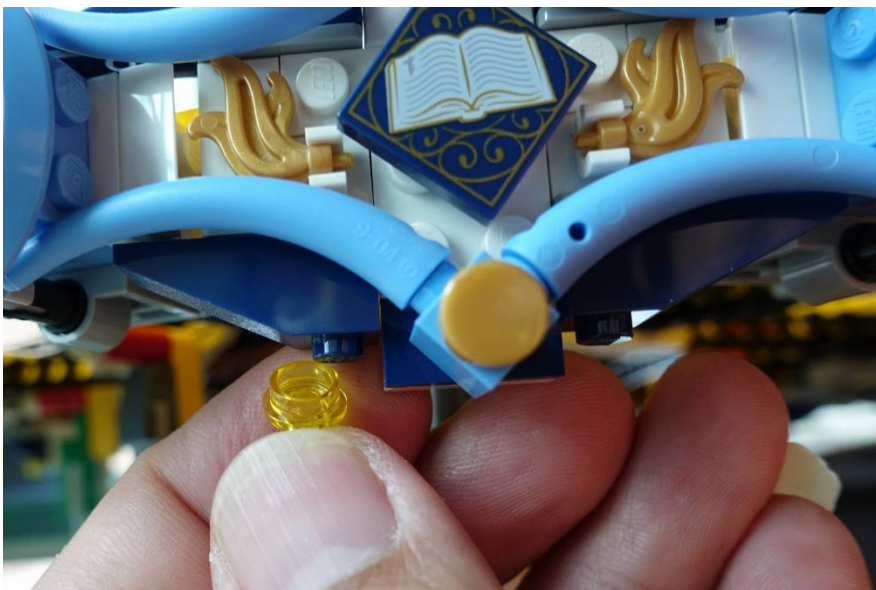

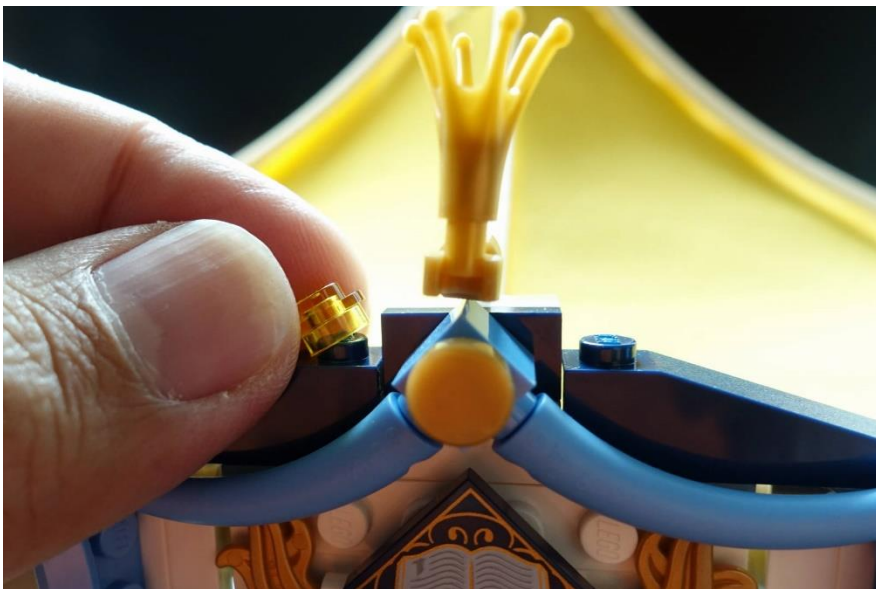

Remove the clear yellow plates at the bottom

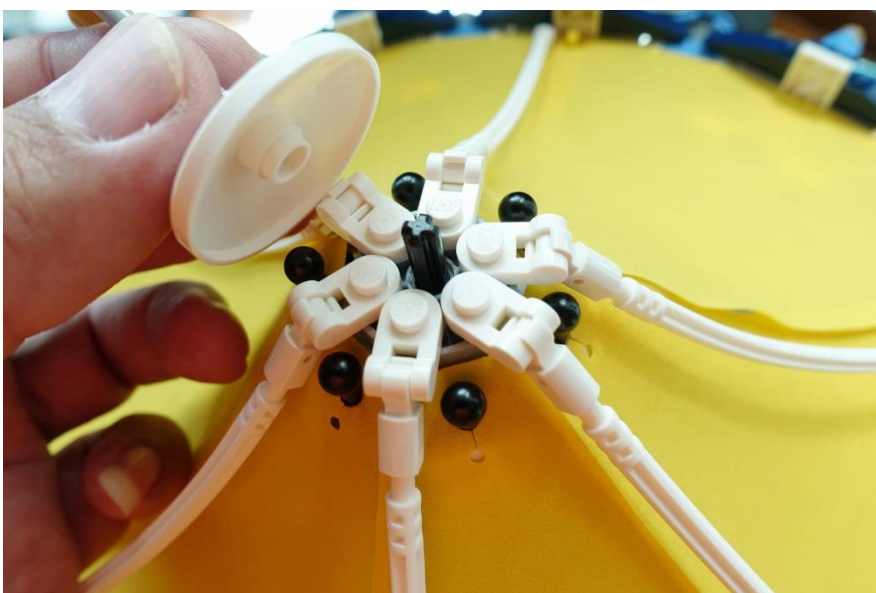

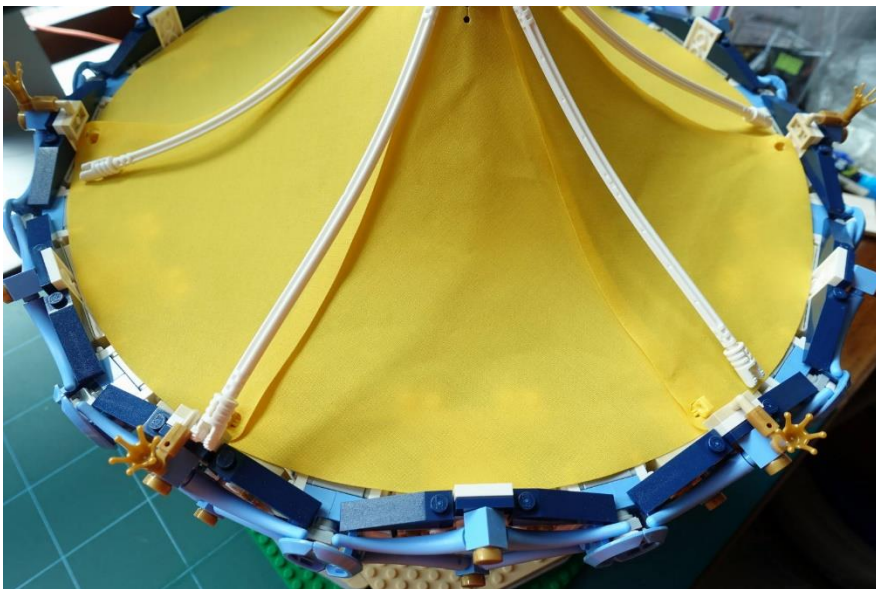

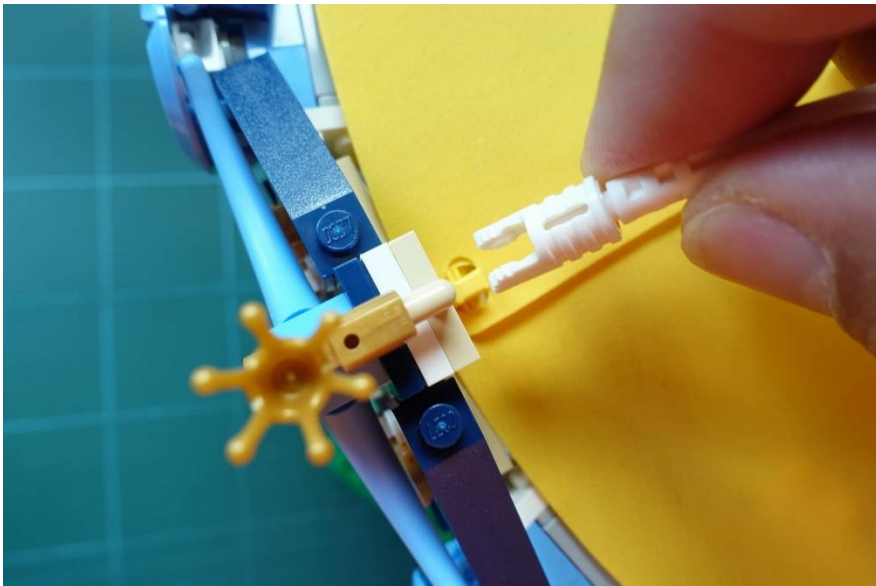

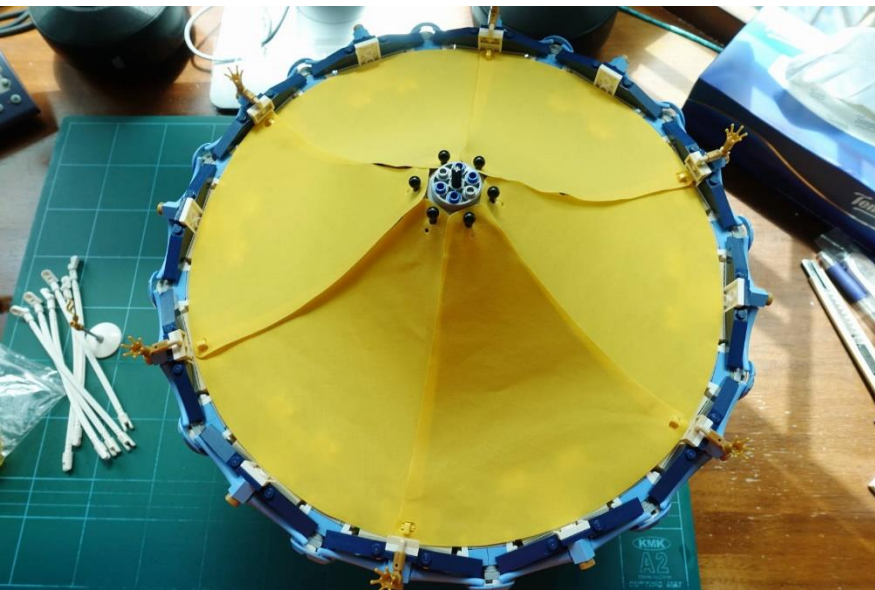

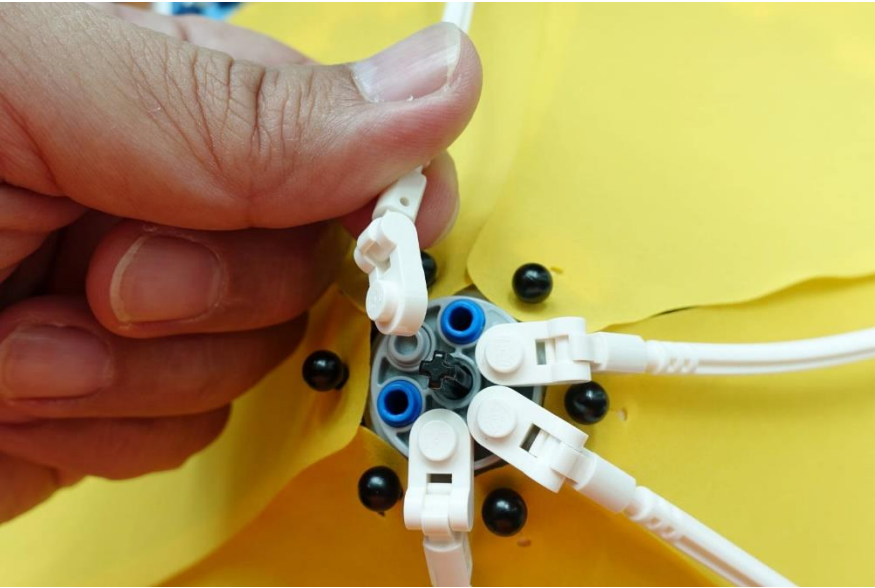

Remove the clear yellow plates at the top

Detach the long white poles

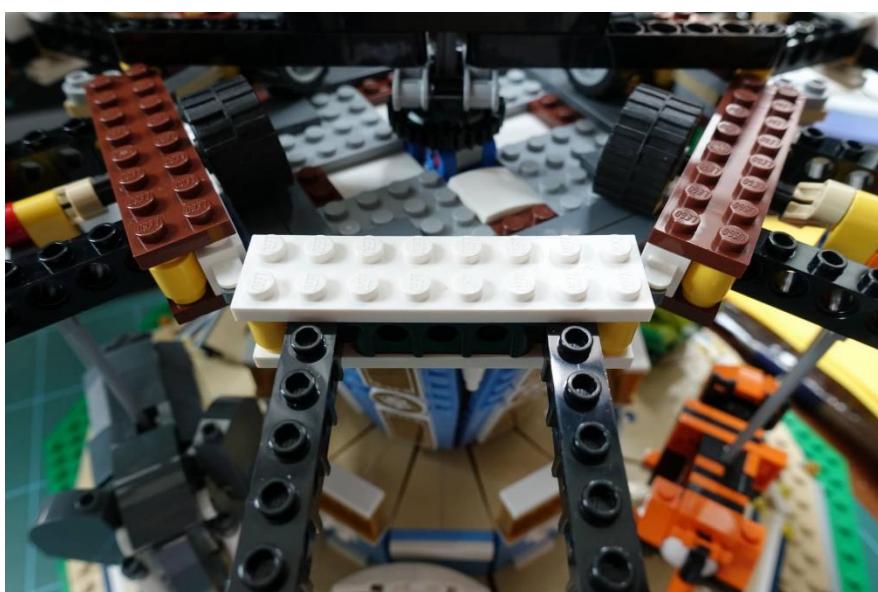

Remove the canvas

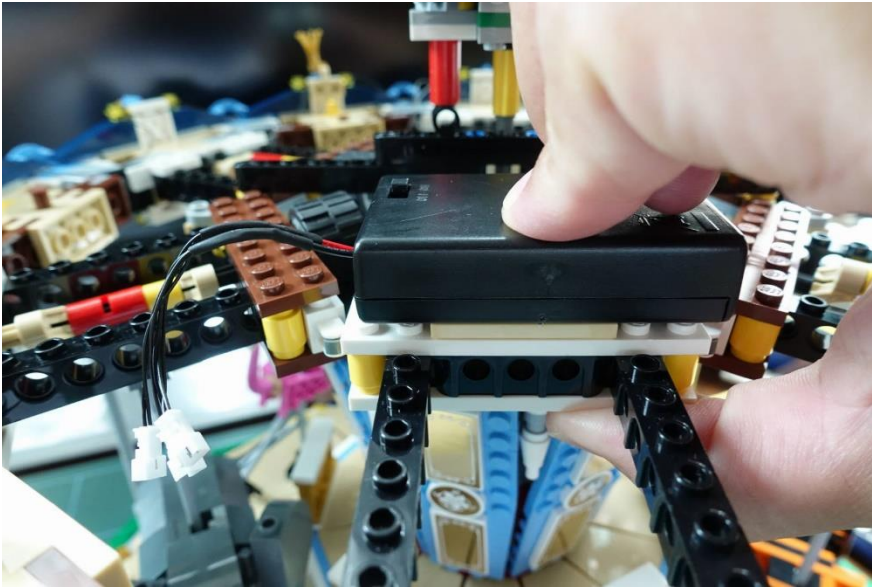

Battery box

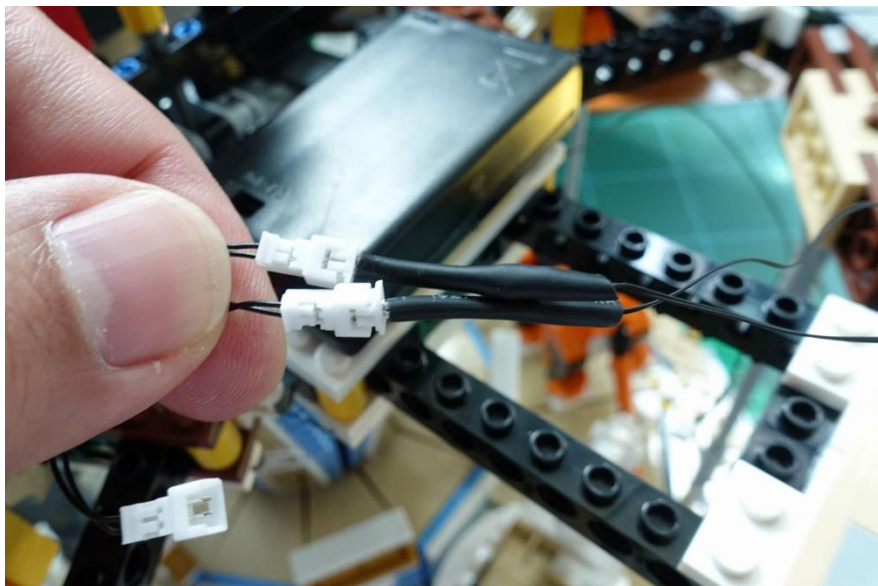

Install one battery box on white plate

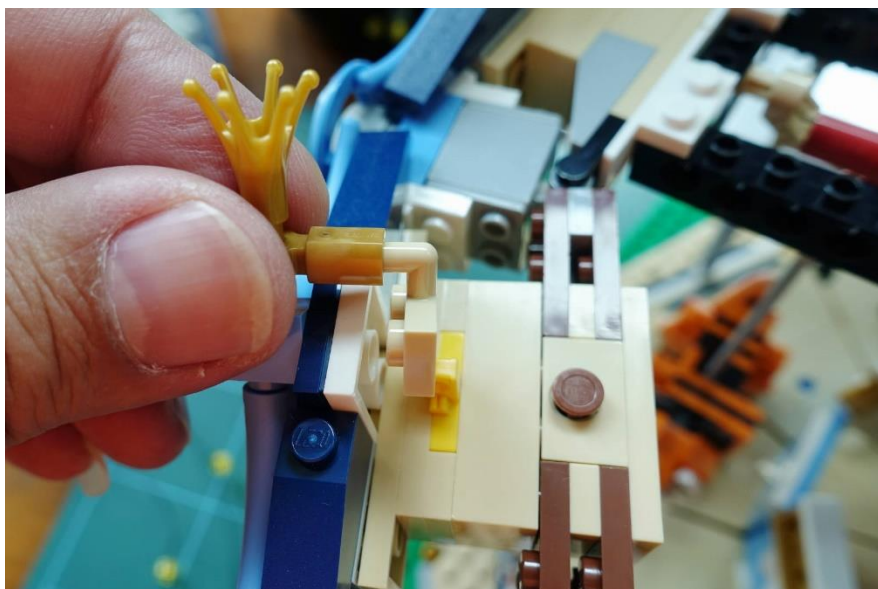

2 strings of clear yellow lights with black wire for carousel top

Connect 2 strings of lights to battery box

Detach 6 crowns

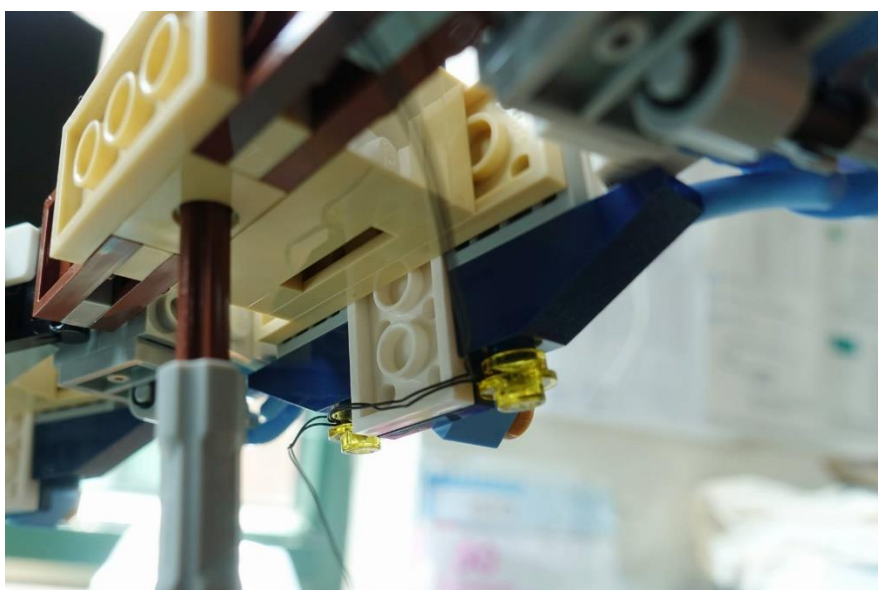

Install one string on the top

Put the crowns back

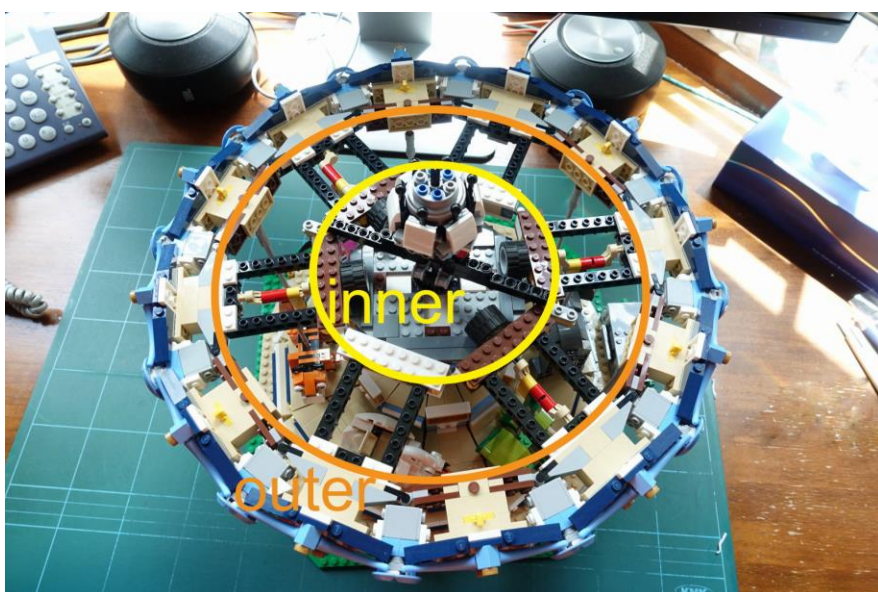

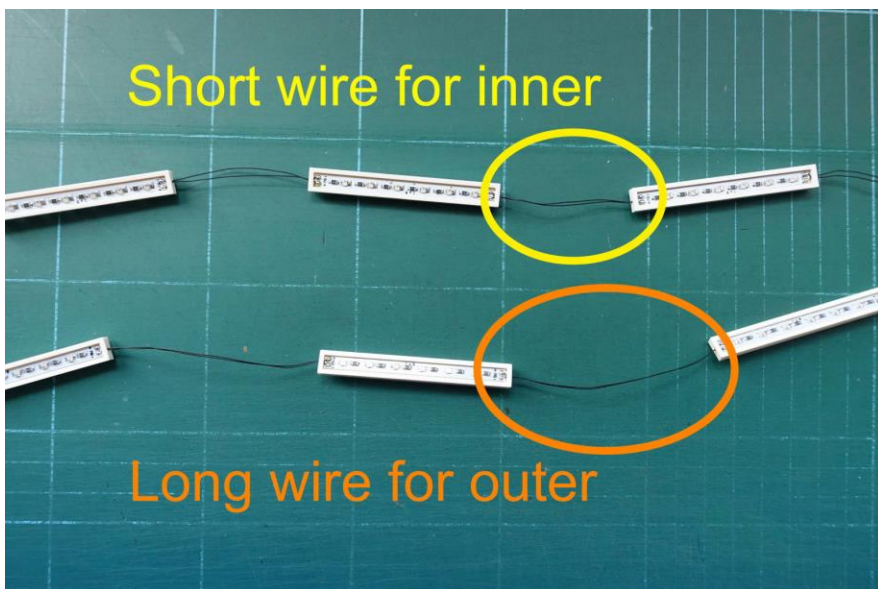

Install the other string at the bottom

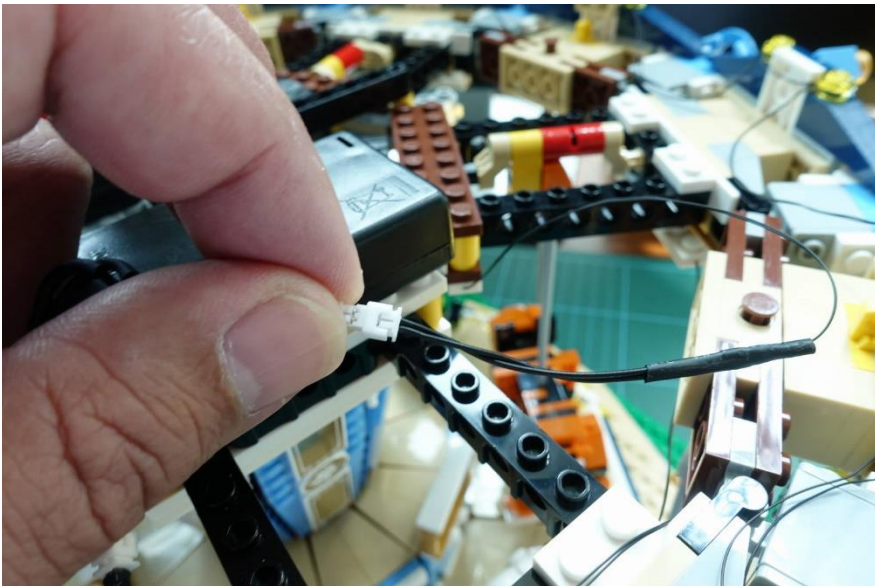

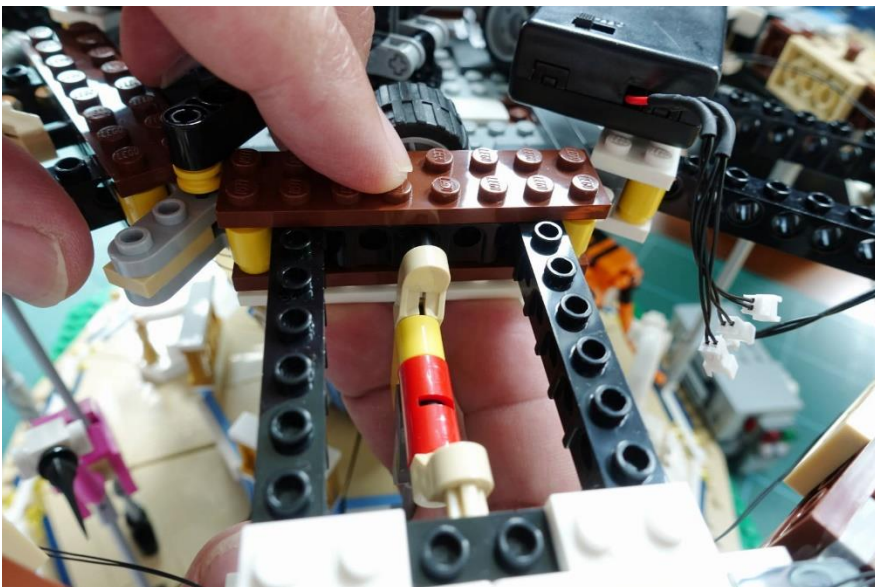

Flashing light Plates

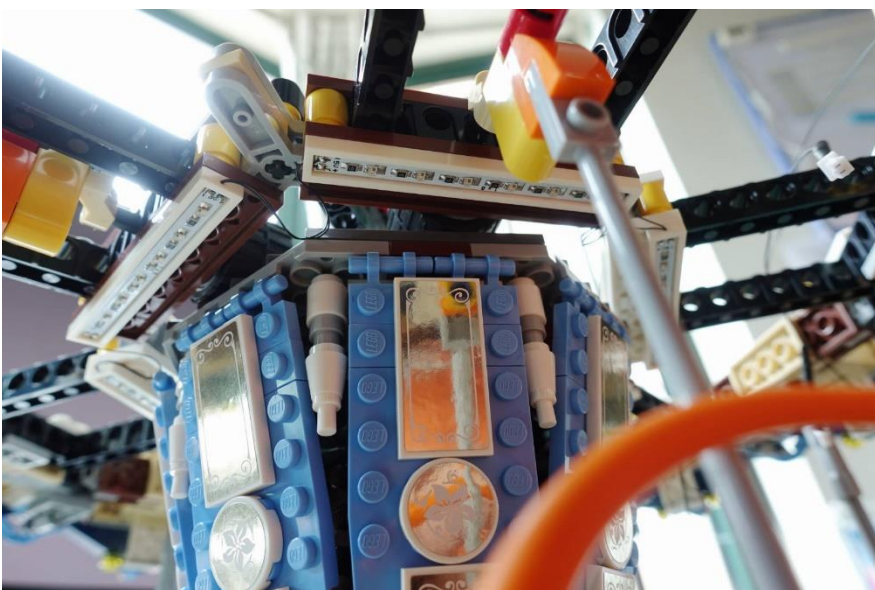

Connect short wire light plates to battery box

Install the light plates at the bottom by both hands

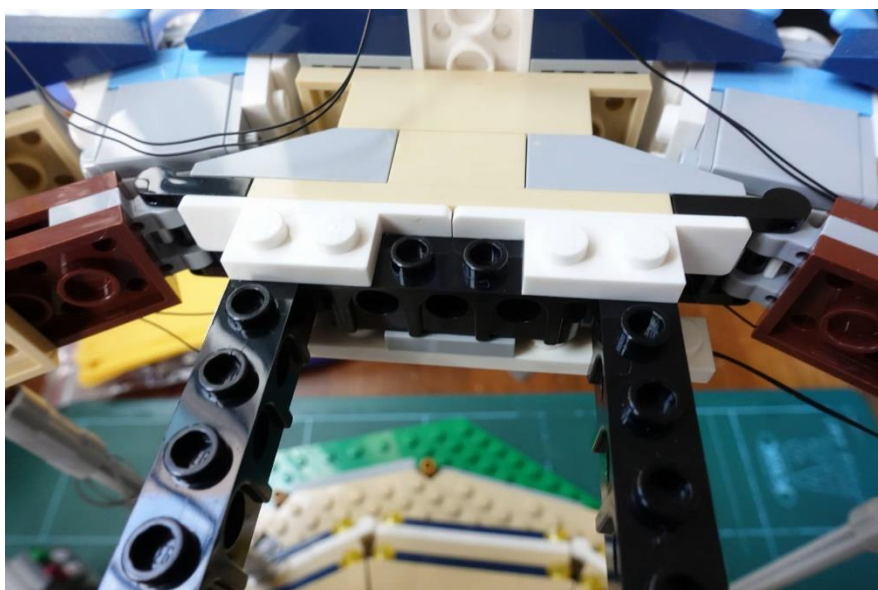

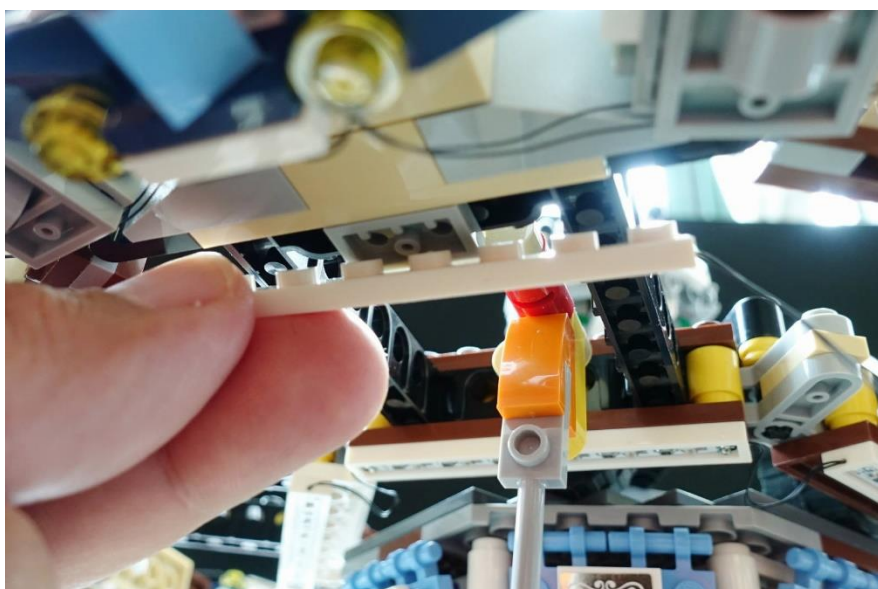

Install all 6 light plates round the inner carousel

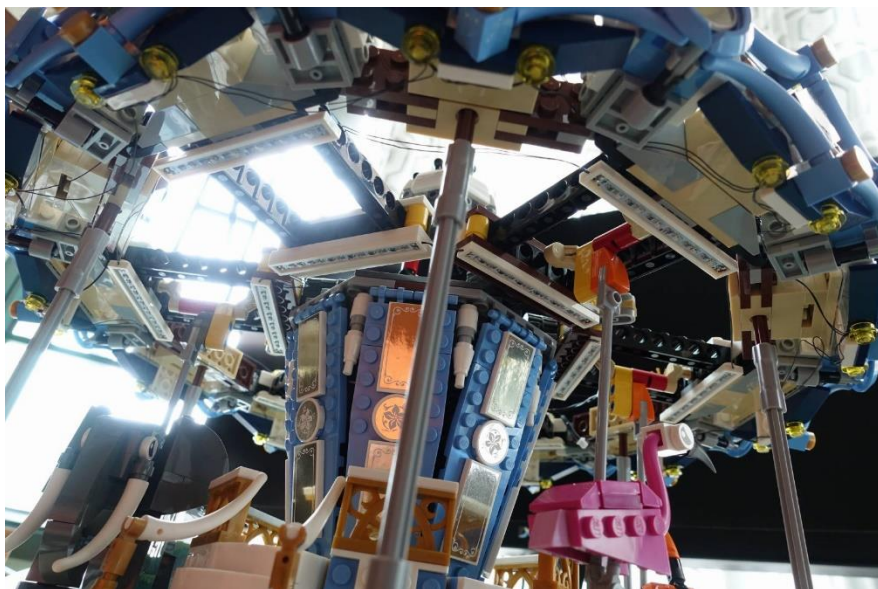

Install another battery box on the other side and connect the long wire light plates

Install all 6 light plates beneath the grey plates round the outer carousel

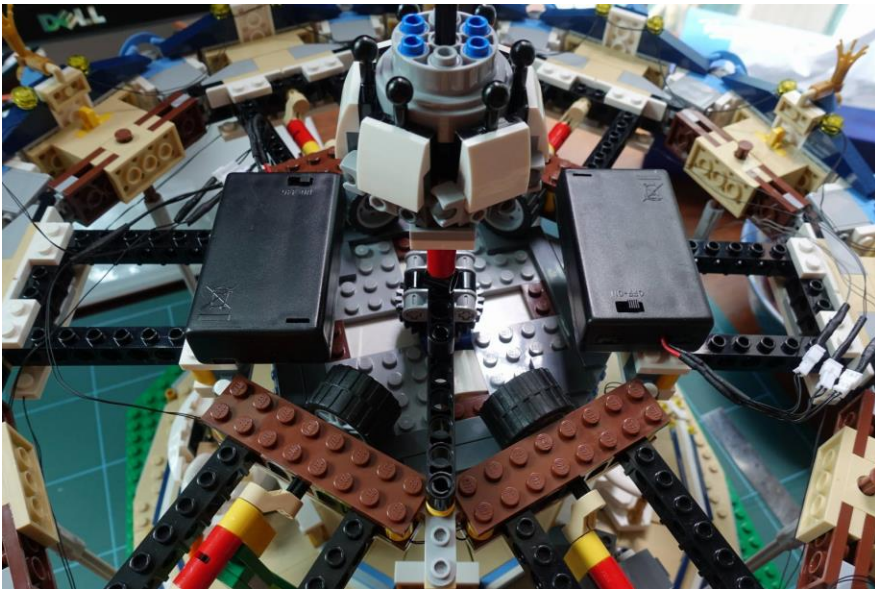

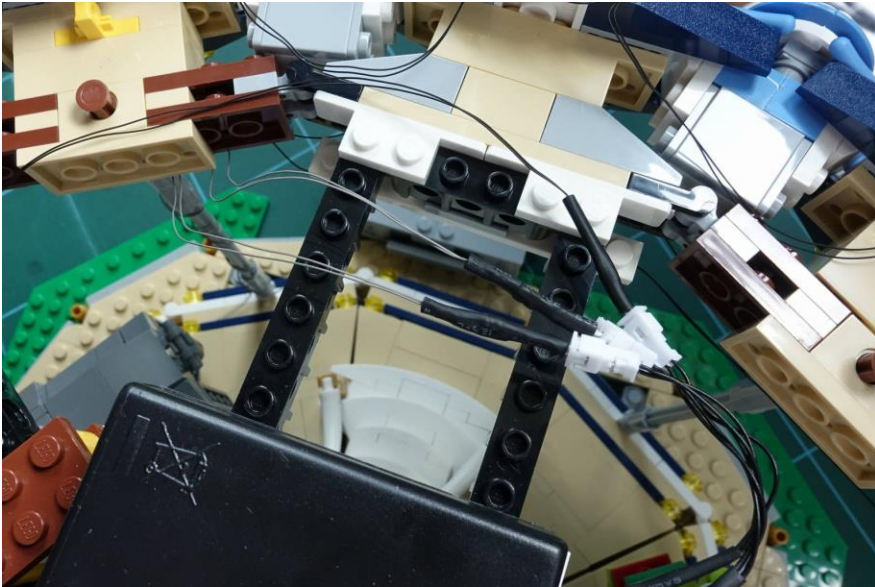

2 strings of lights with grey wire for carousel bottom

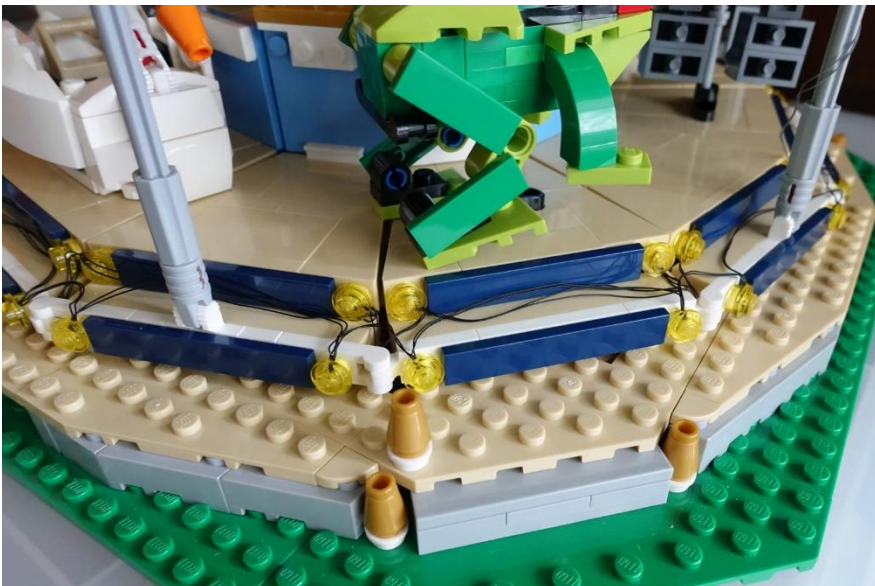

Rotate the grey wire round the grey pole

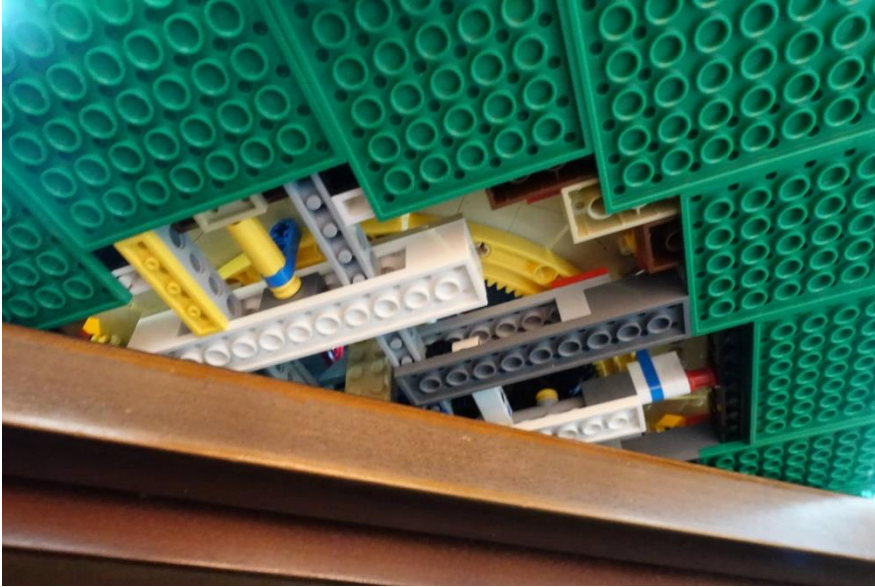

Connect to battery box

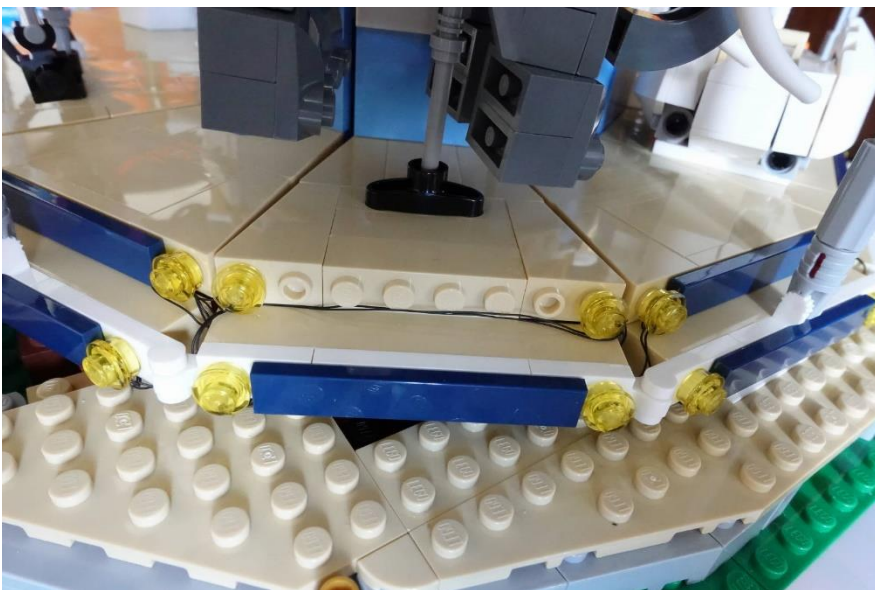

One string of clear yellow lights for each level

You can hold the wall inside the carousel by your finger

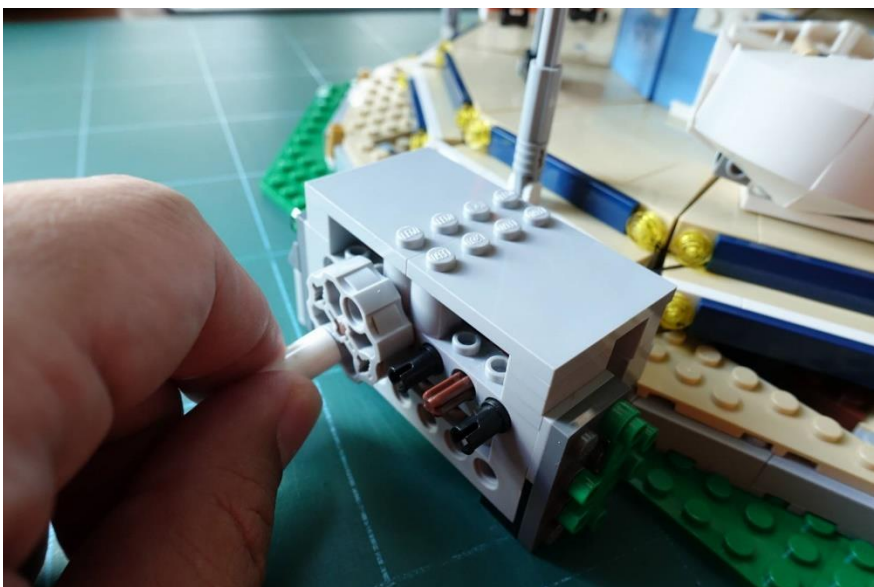

If you want to hide the wire, put the wire behind the dark blue tile for upper level light string

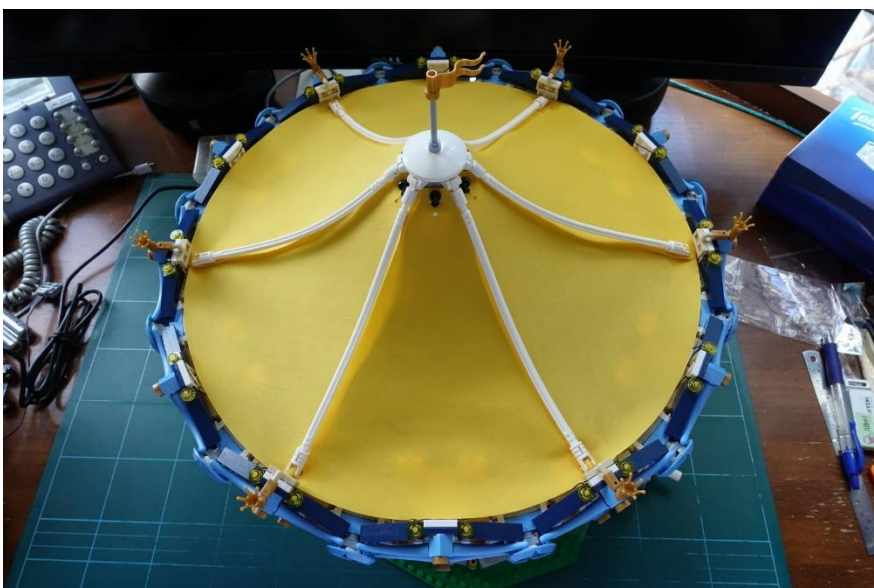

And press the wire under the rotating stage for lower level light string

Rotate the carousel by hand to make sure all wire okay

Put the long white poles and canvas back

Switch on both battery boxes through the canvas

Done
