

Lego 10271

Installation Guide

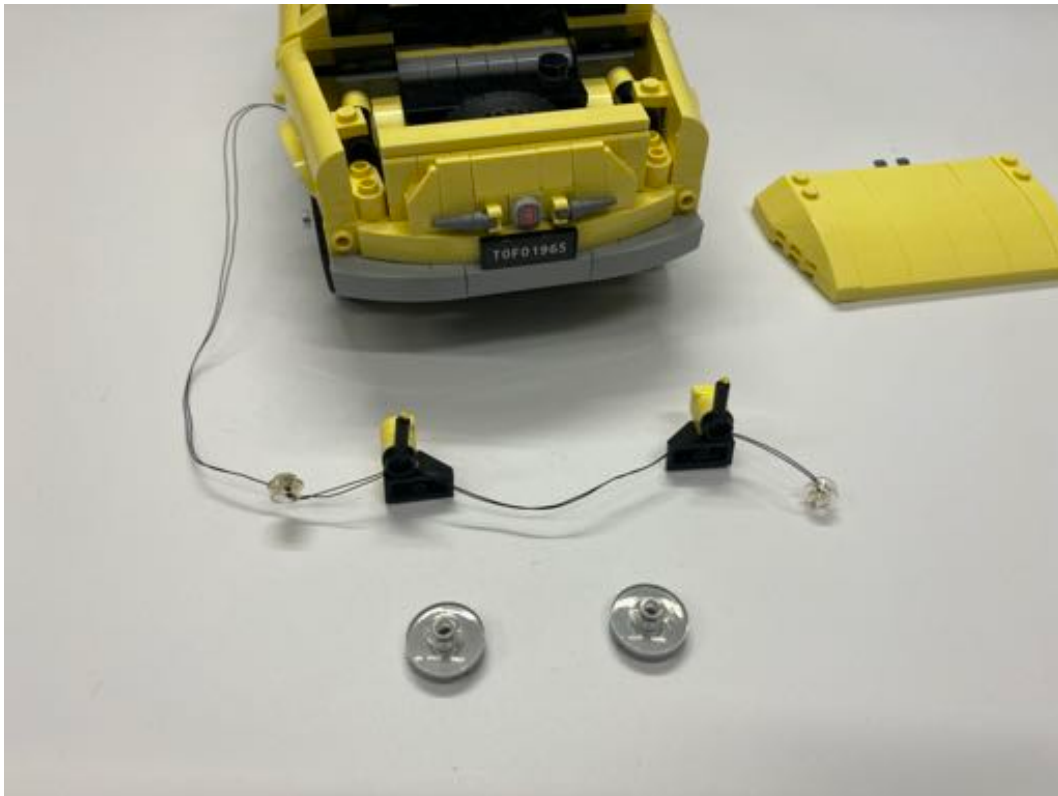

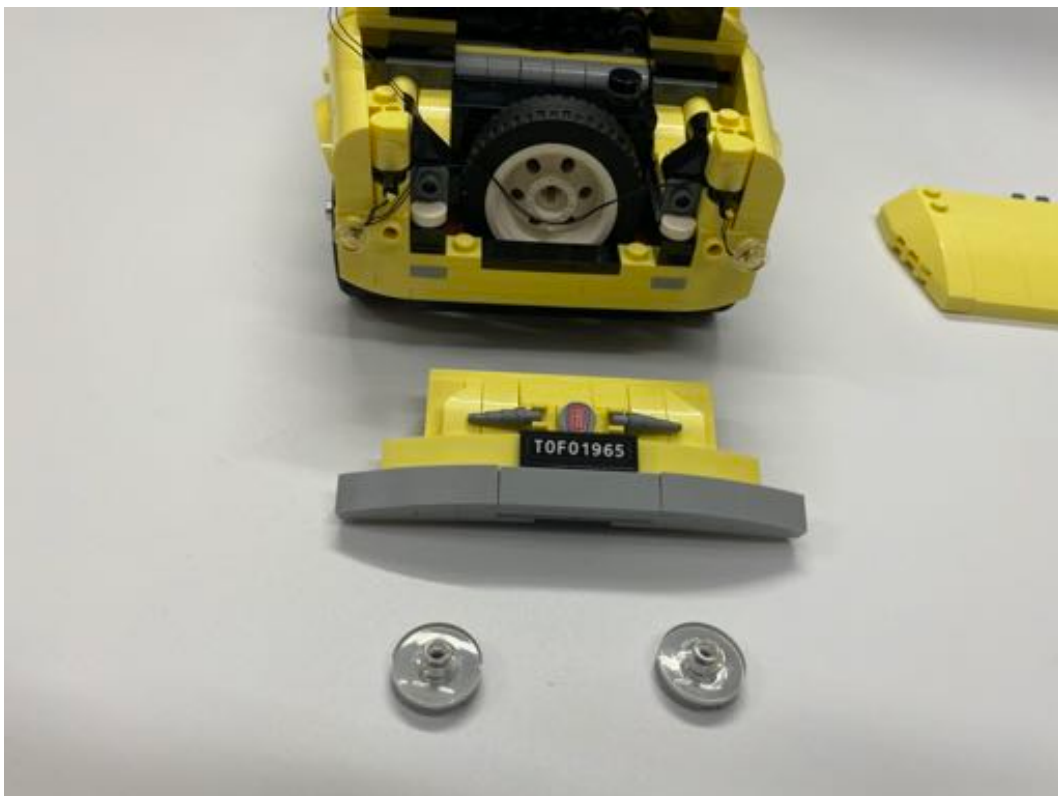

First we separate the parts as shown
(The parts in red circle will be taken away and replaced by the lighting part)

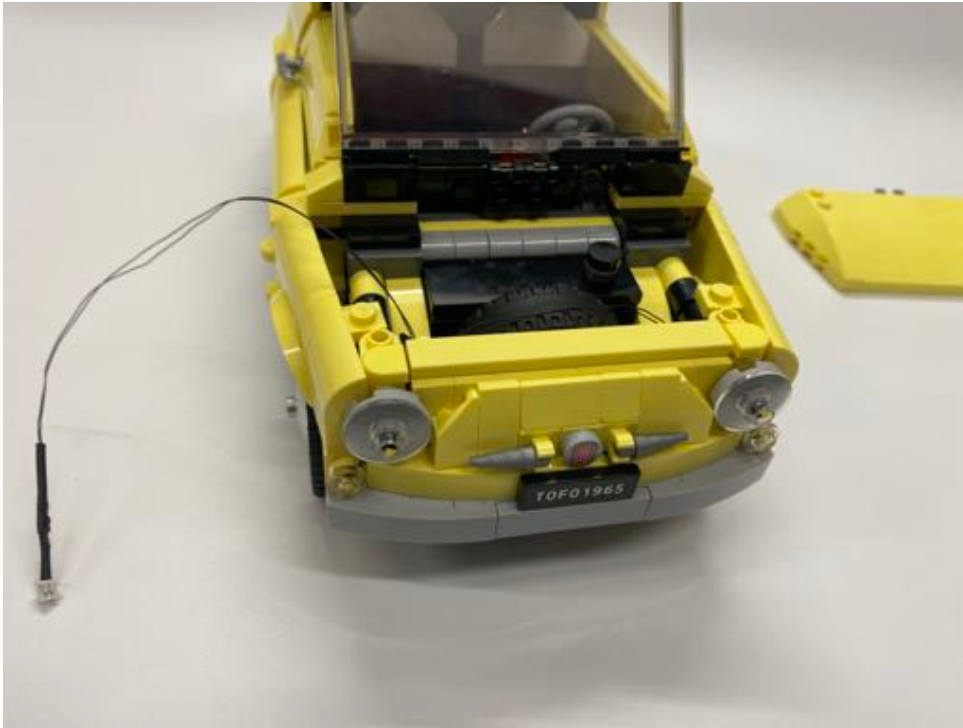

Install the lighting part and put back to the car

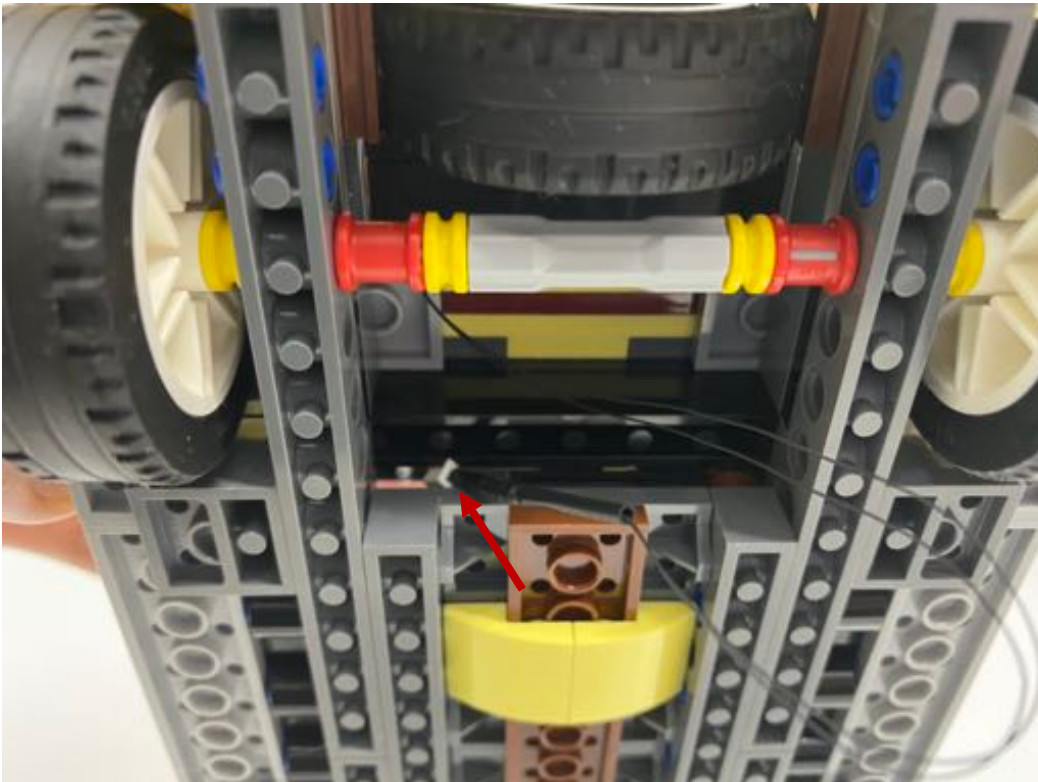

Can remove the front plate before installing in purpose to cover the wires when restoring the plate

Restore the plate and the front light back to the position

For the connector, pull the wire underneath the car and back inside the car from the hole as shown

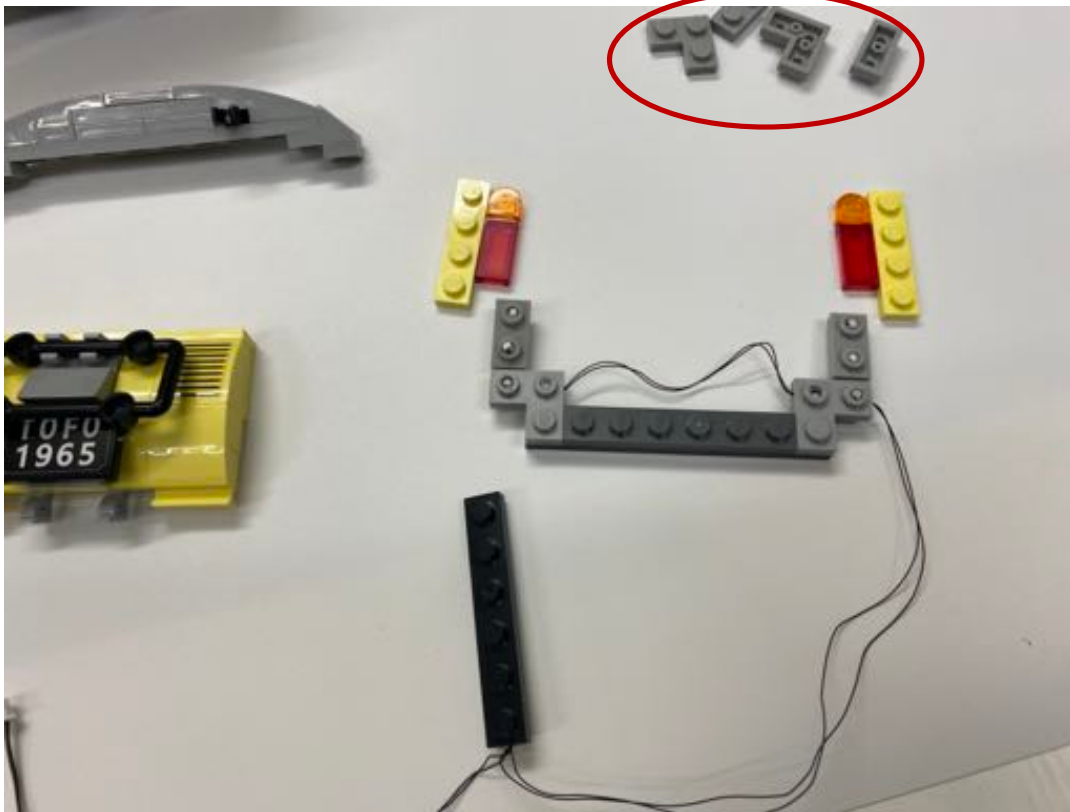

Leave the wire in here first then we go to the next step

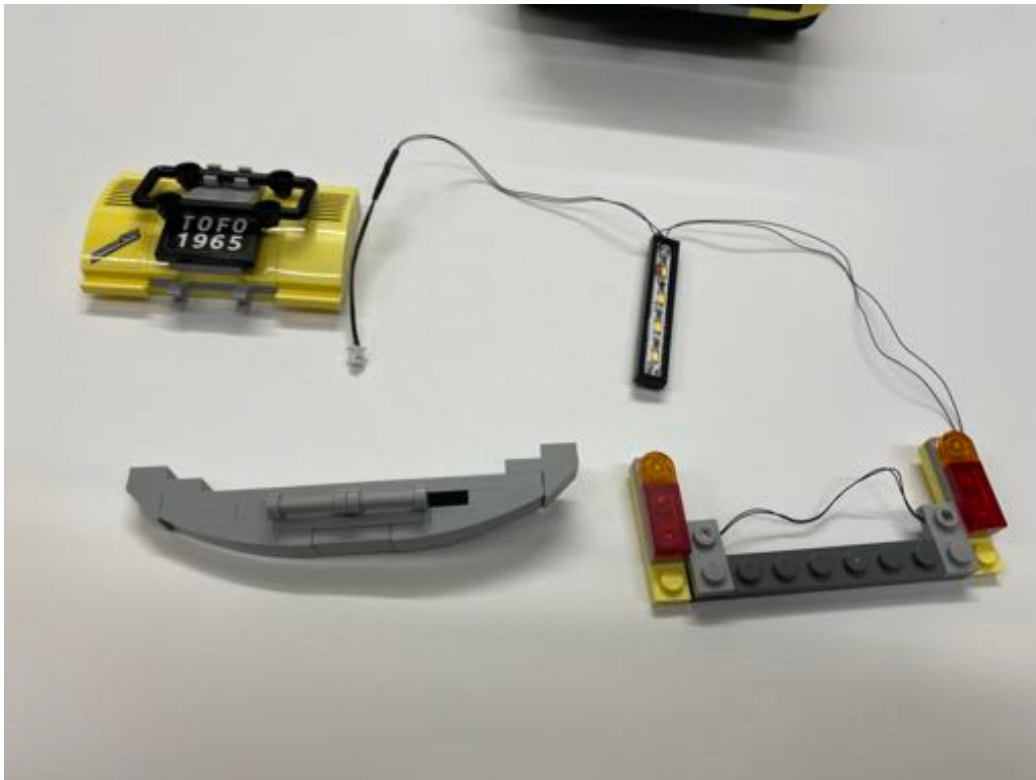

For the rear side of the car, detach the parts as shown

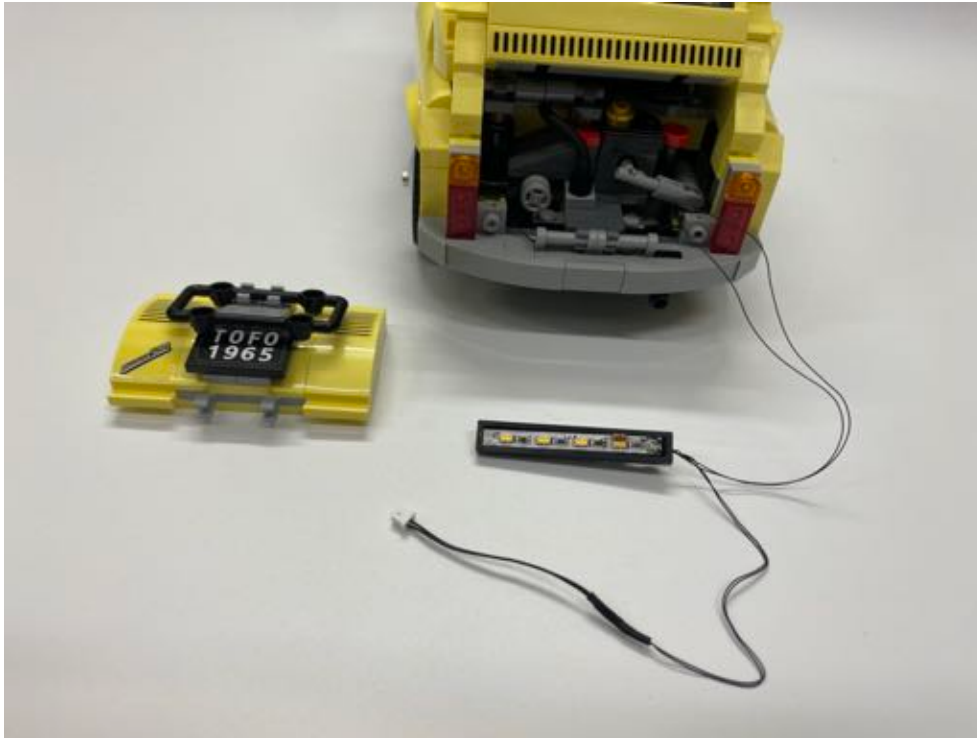

The plates in red circle will be taken away and replaced by the lighting part

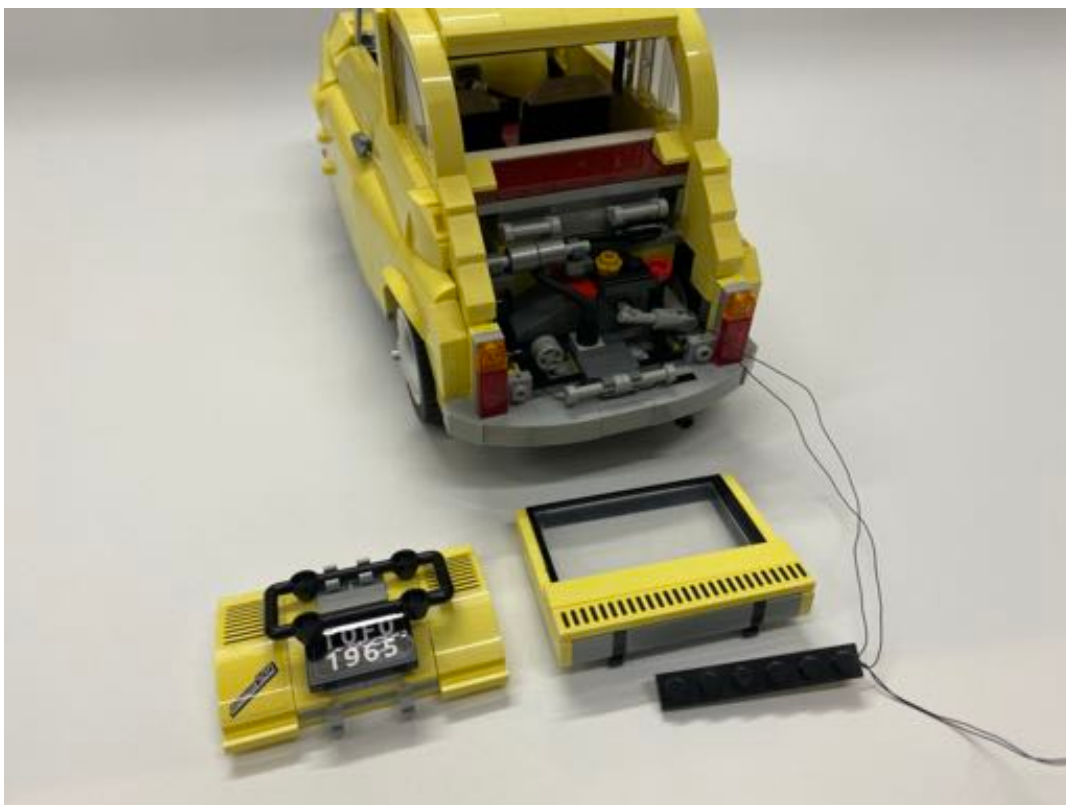

Then restore the clear tiles and the 1x4 plate

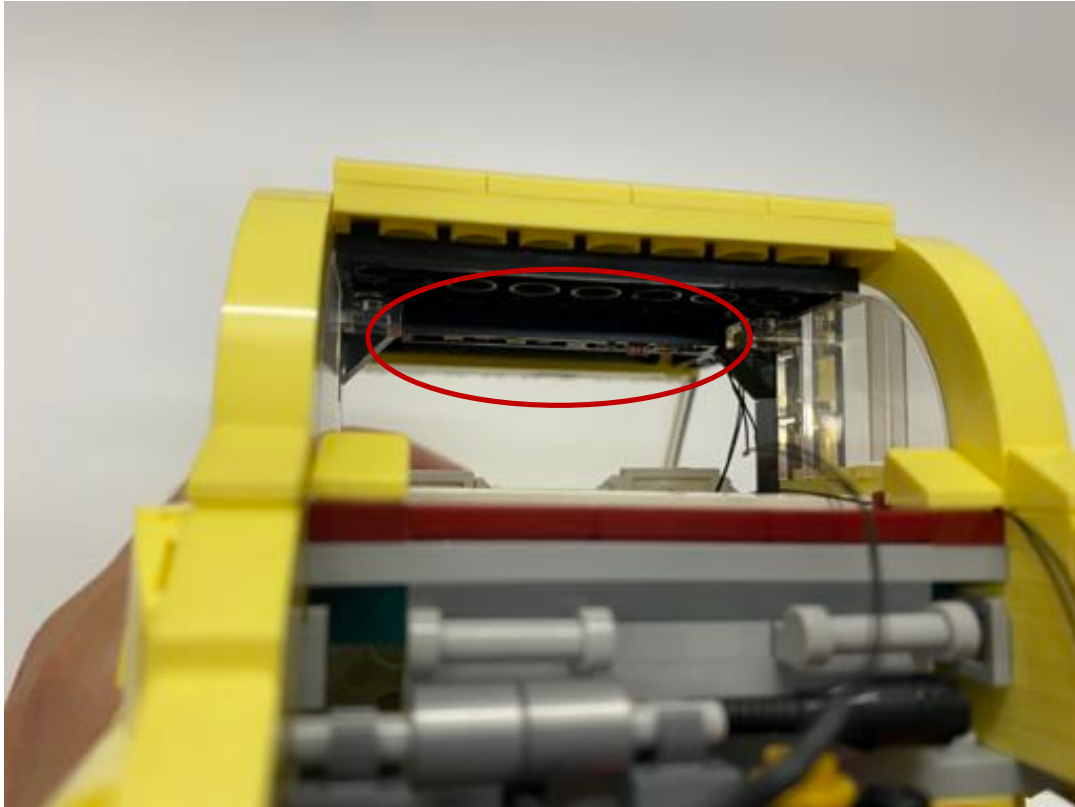

Restore the rear lights and bumper back to the car

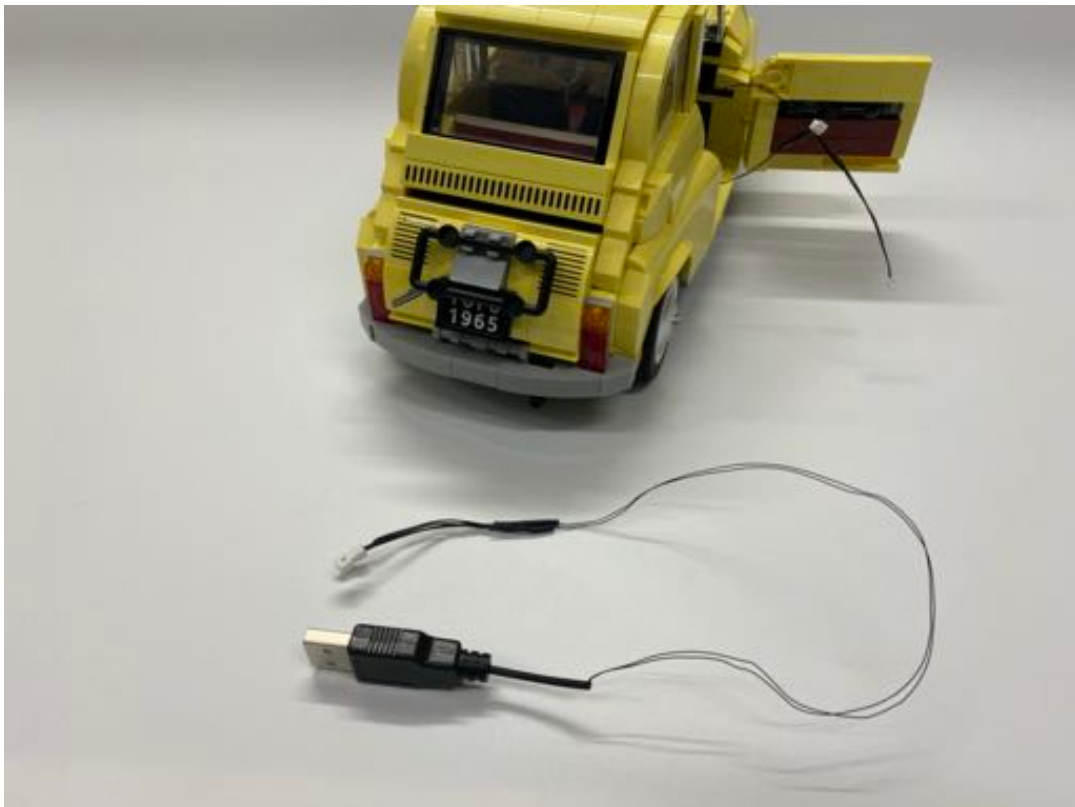

Then detach the rear window in purpose to pull the 1x6 lighting plate inside the car

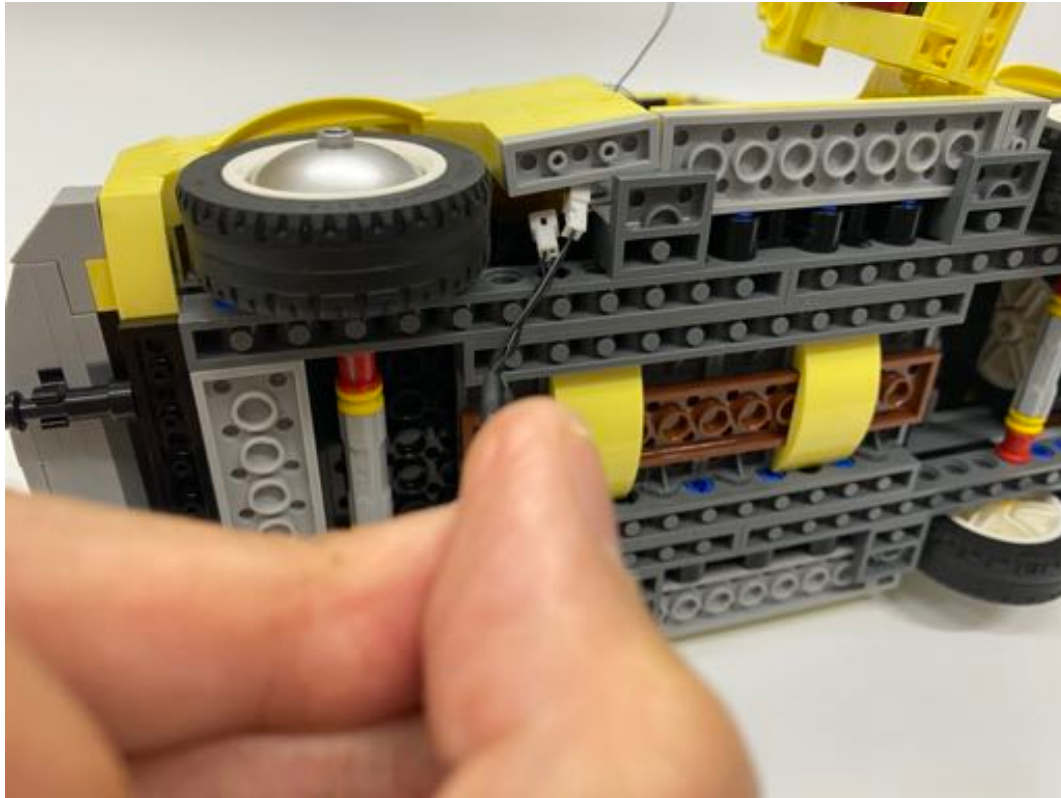

Install the 1x6 lighting plate

Pull the connector to the front seat, then restore all the parts detached before
Take the USB cable ready

The connectors from the USB cable can get into the car by the hold shown

Connect the plugs then hide them behind the seats

Then it's done~

You can use battery box instead of the USB cable
*the battery box needs CR2032 battery and sold SEPERATELY

The battery box can be hidden as picture shown
