

Lego 21047

Las Vegas

Installation Guide

First we separate the parts as shown

Then exchange the lighting parts with the white parts below

Return it back to the building (remember to split the plugs to both side)

Put the lighting part on and connect the plug with the one from previous step

Separate the tan lighting parts and detach the parts from the building as shown then combine with the lighting 1x3 plate

Put the lighting part back and connect the wire

Remove the two 1x3 plates and replace by the 2x3 lighting plates

Put the lighting parts back on the building and connect the plugs

Now detach the top of the tower and replace the white round plate by this lighting part

Get the wire out from the hole of the black cone the put back on the tower
Beware the wire has to be stated in between the studs when plugging it otherwise
it may damage the wire

Connect the plug afterward

Take the parts out as shown, then we start installing from the part in red circle

Split the part, take the 1x4 white plate and 1x3 grey plate away and replace by the lighting part

Put the remain parts back on

Then restore the whole part as shown

Take the red and yellow 1x1 plates away and replaced by the lighting plates

Then combine with the part from previous step

Split the white plates and the trans black plates as shown

Start from the 1x3 grey plate at bottom, take the 1x1 black and 1x2 and put the lighting parts on

Then put the white 1x2 and the 1x2 trans black with light on top

Put another 1x2 white and a 1x2 trans black (without light) on top

Then install the 1x2 trans black and 1x1 black with lights

Then the 1x2 white and 1x1 trans-black (without light)

Then the 1x1 grey tile

Then install the 1x2 trans black with light on top of the 1x2 white
And combine with the previous parts

This part is done after installing the remain white parts on

Put the building back, connect the plug and that's finished
