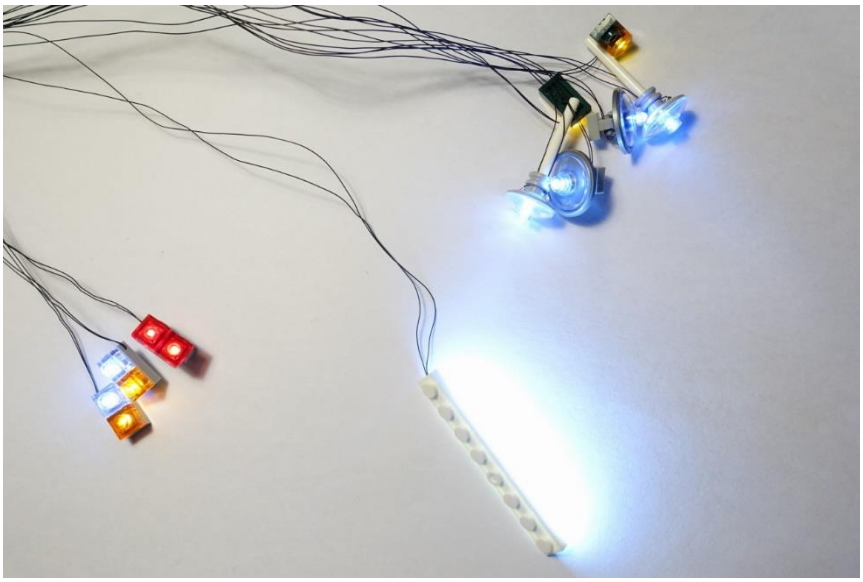
LEGO 10242

MINI *COOPER* MK VII

LED LIGHTING KIT INSTALLATION GUIDE

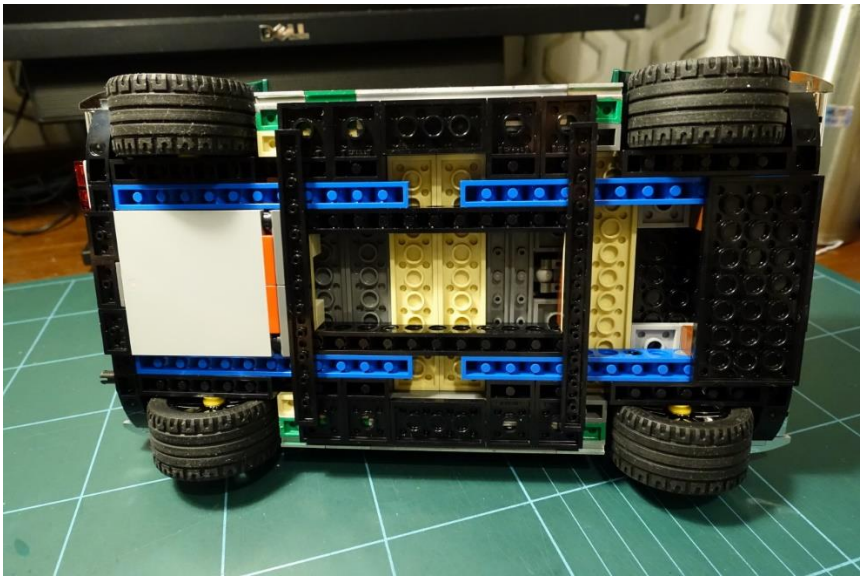
GLOW BRICKS

Before the installation, plug in and test all lights first

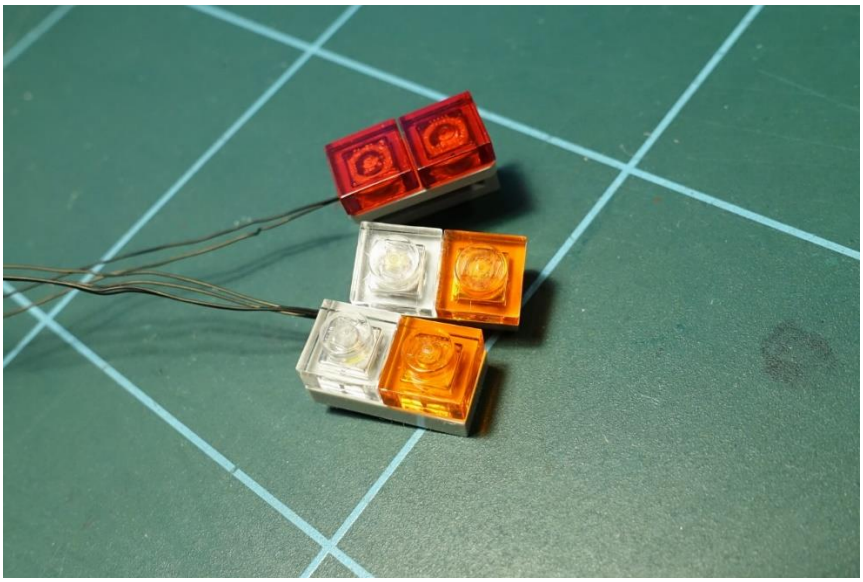


Okay, Let’s start. Remove both side mirrors

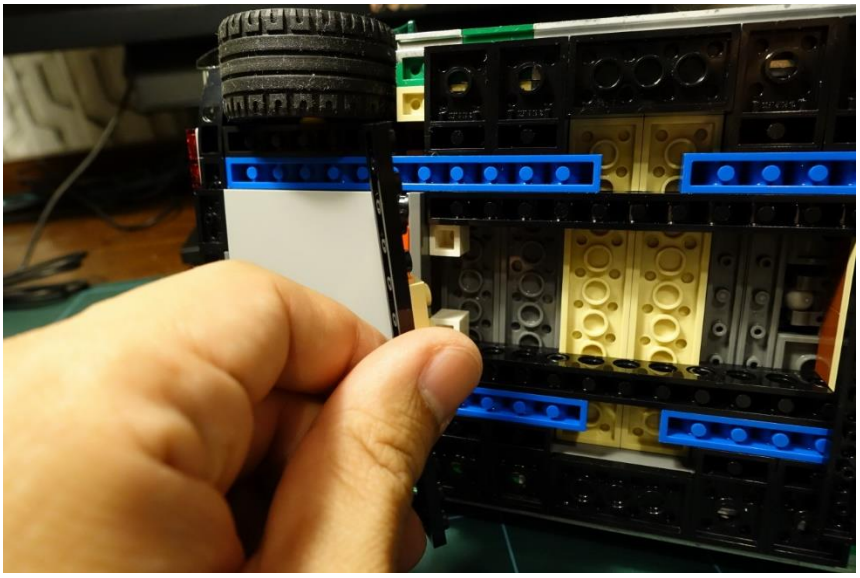
Put the bottom of the cat towards you



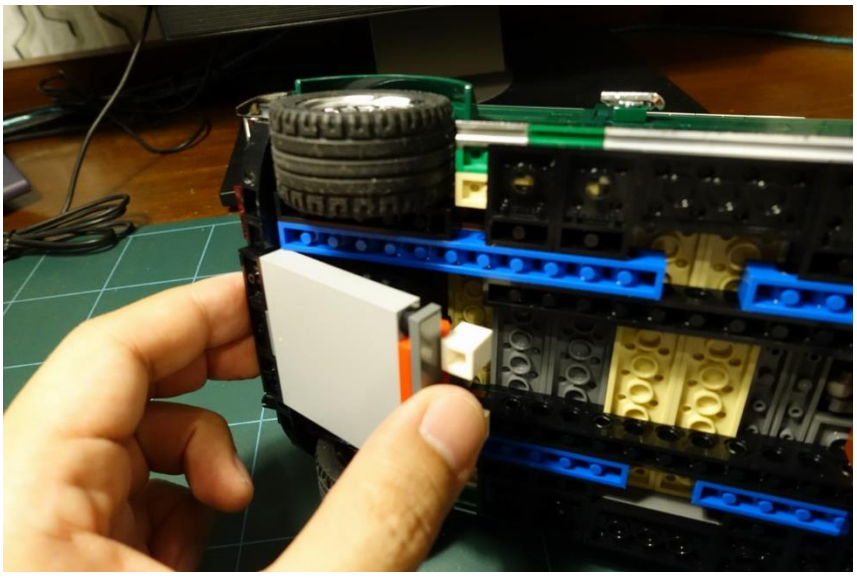
A. Rear light

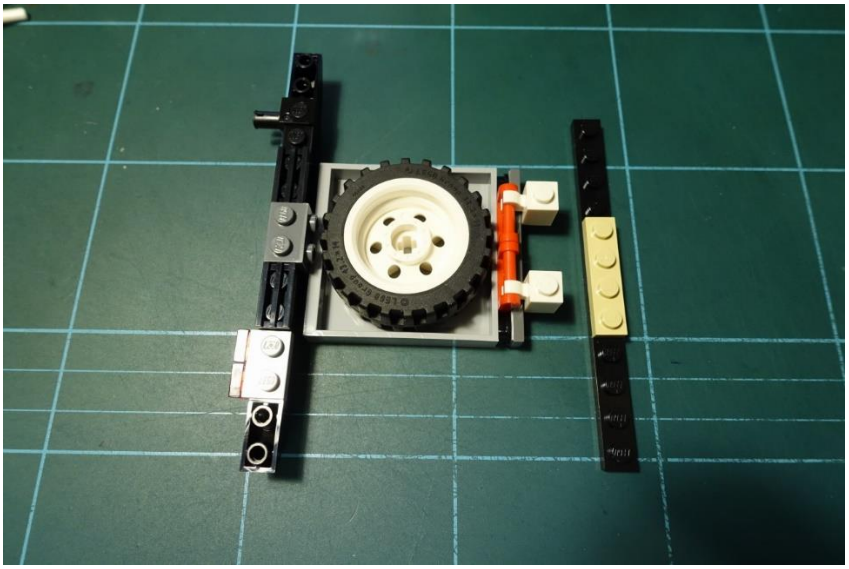


Remove the black plate

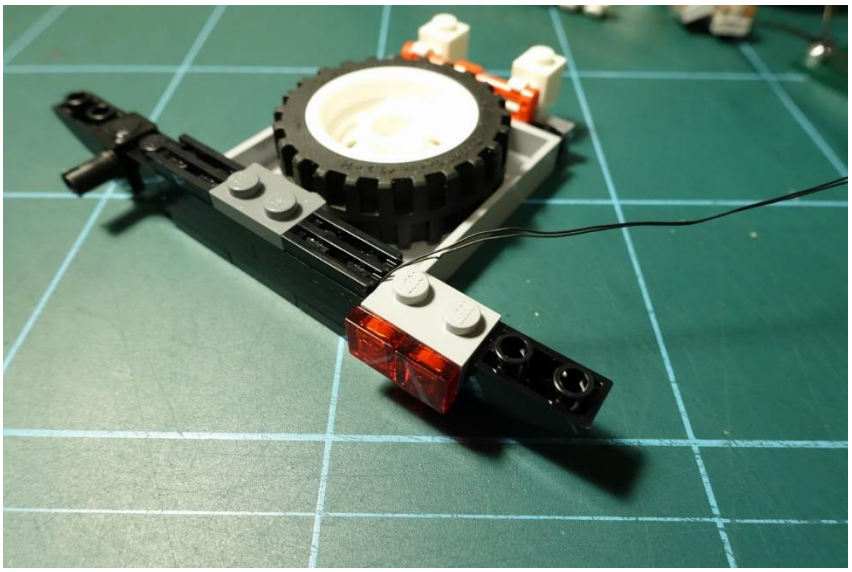


Remove the spare wheel compartment

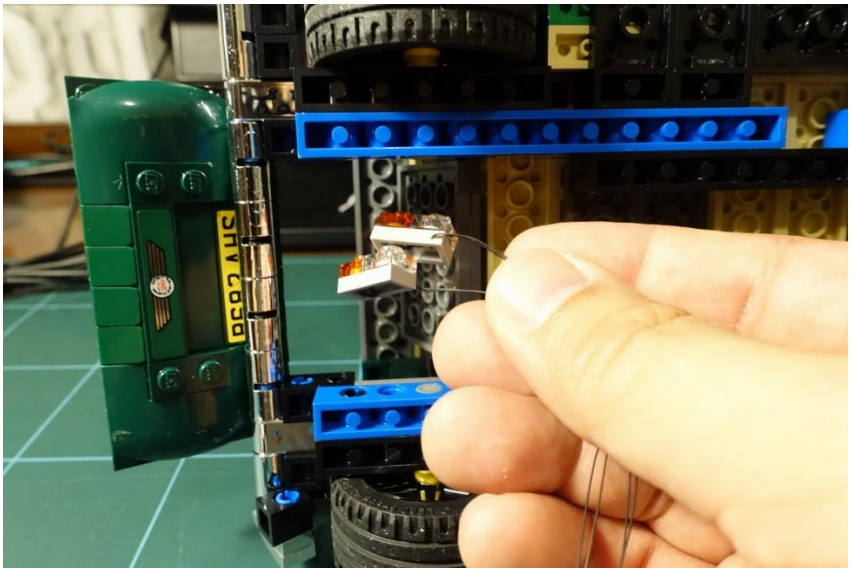




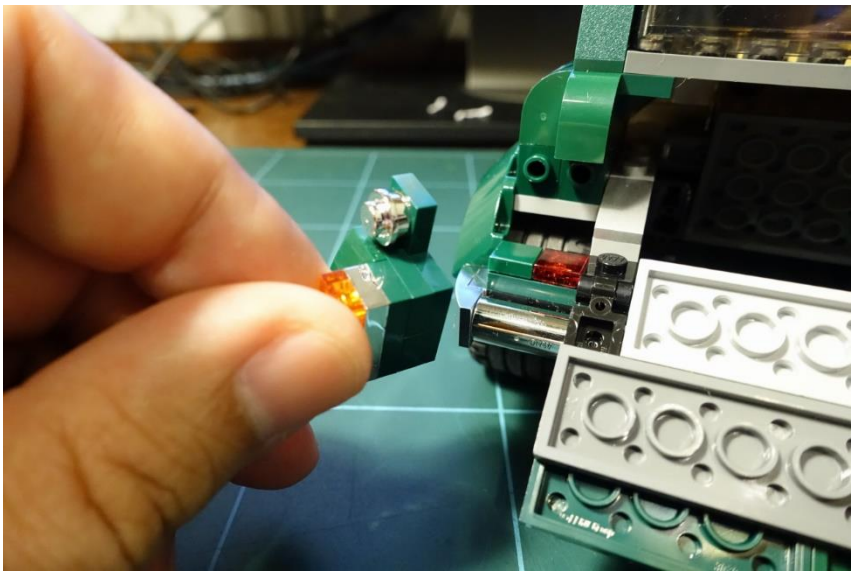
Replace the rear fog light with LED parts

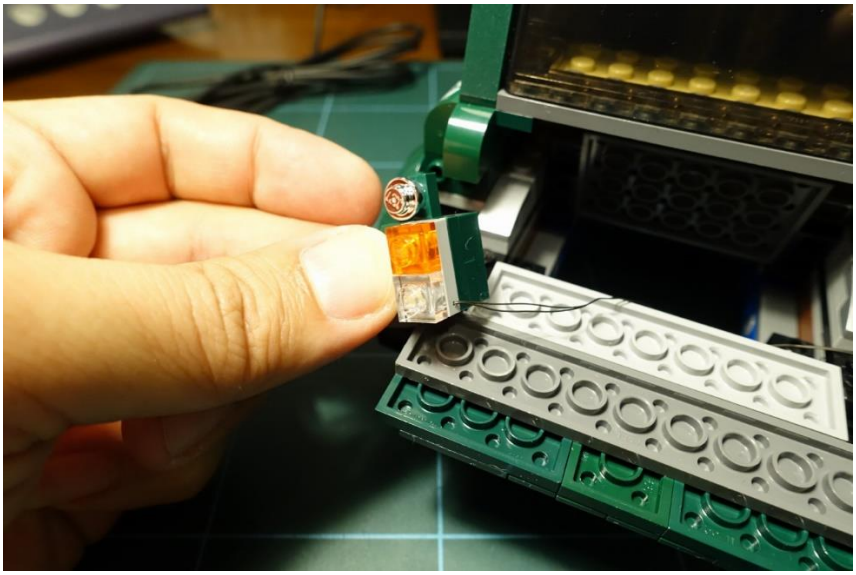


Open the trunk, pass two rear LED lights through it

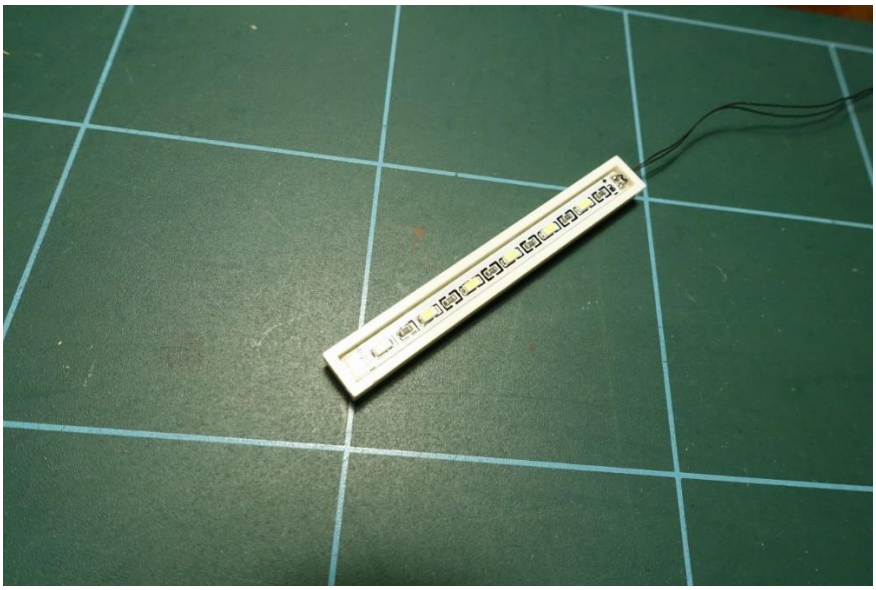


Replace the rear light on both sides with LED parts.

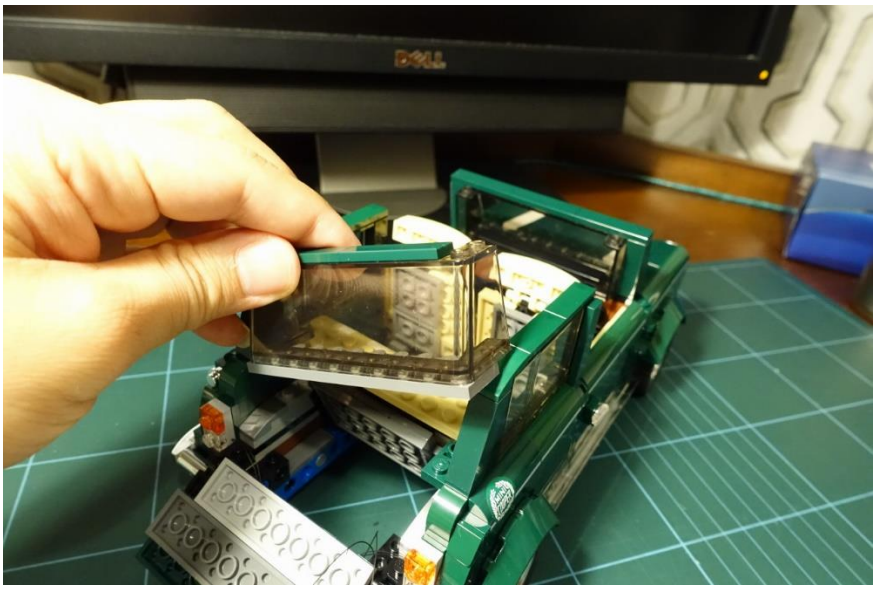




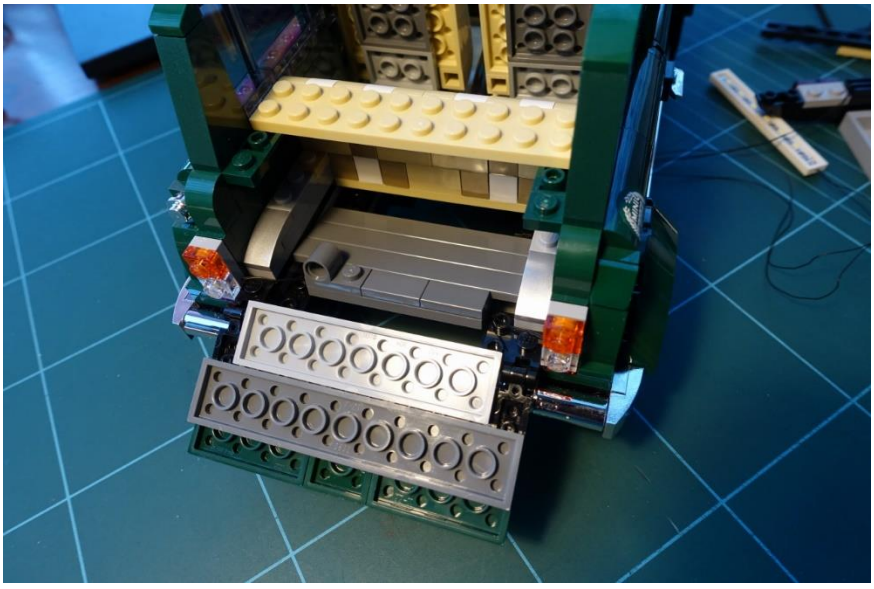
B. The room light



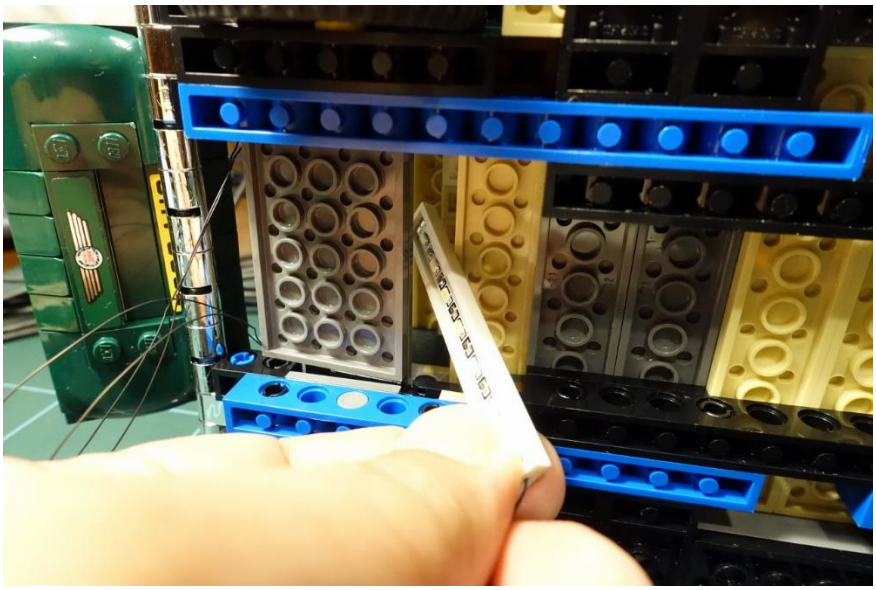
Remove the roof and rear window together with the gray plate.

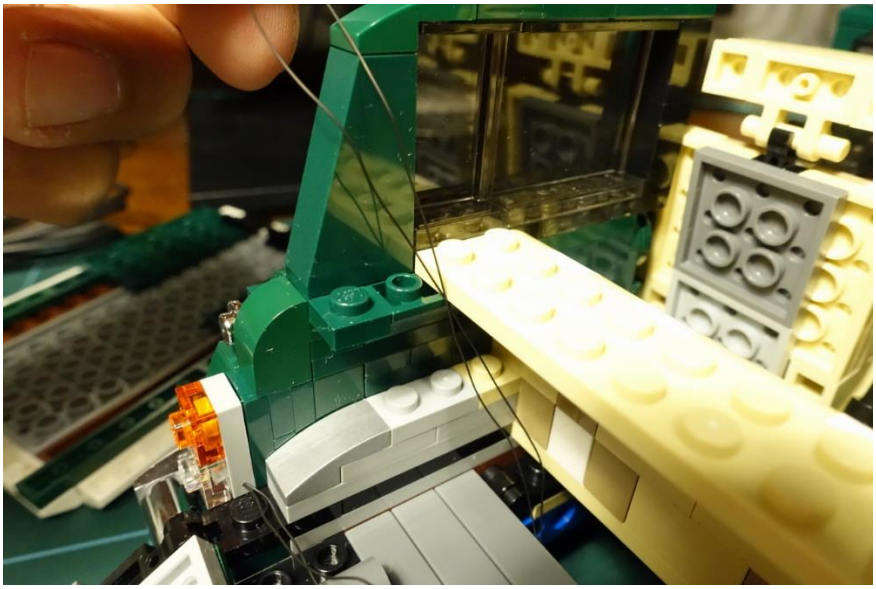


Pull down the bottom of trunk

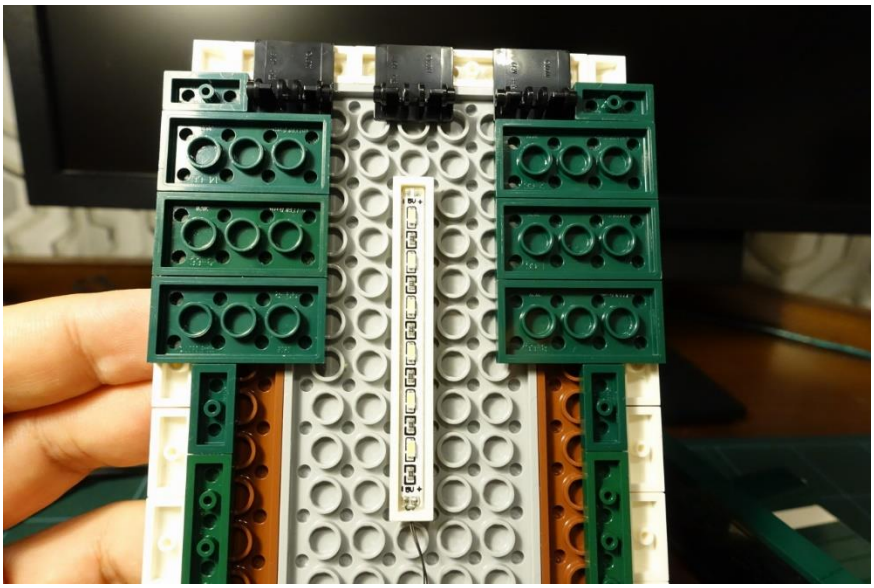


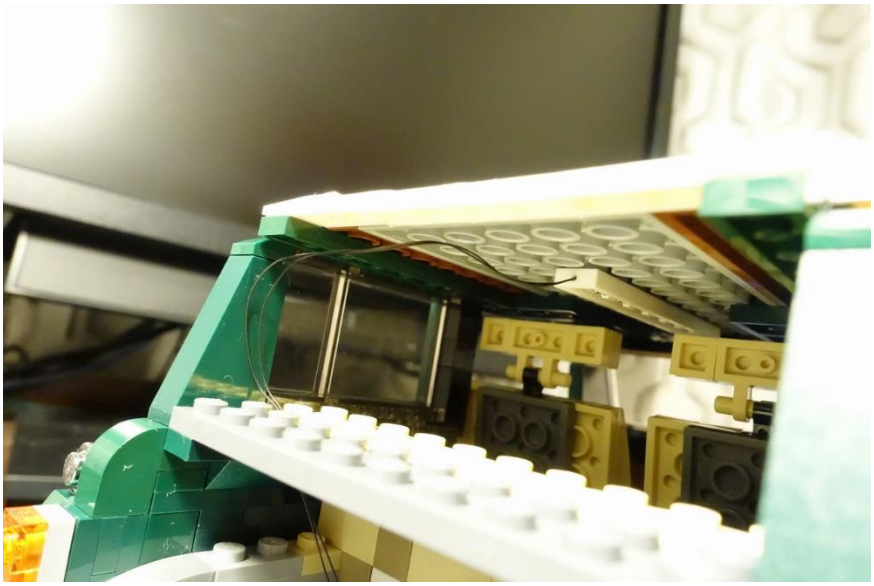
Pass the room light through the gap



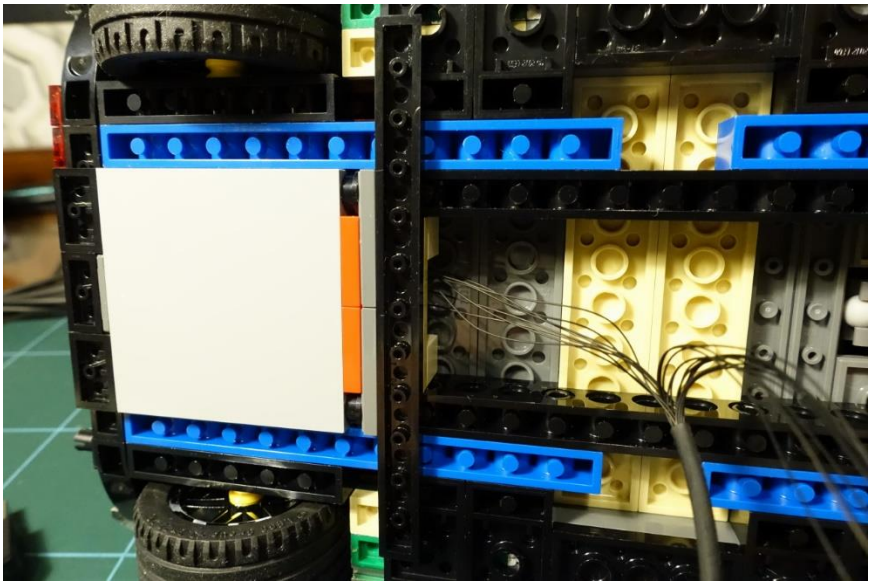


Install the room light on the middle of the roof



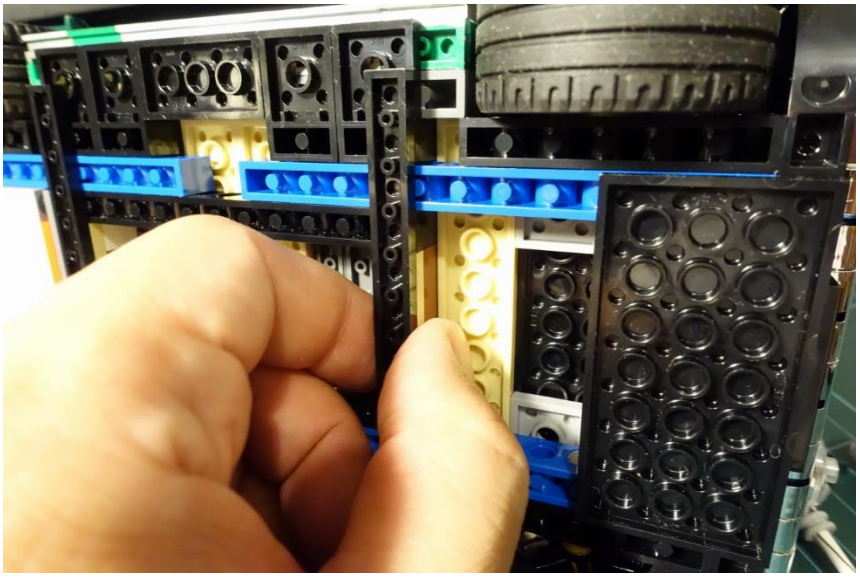


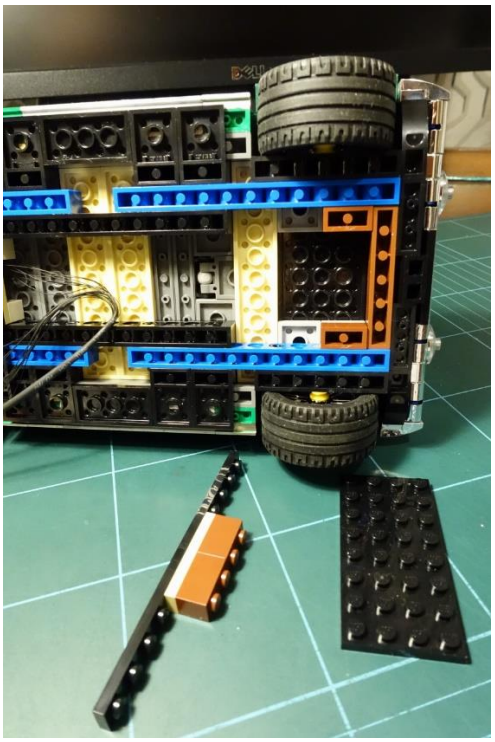
Put back the rear window, spare wheel compartment and black plate



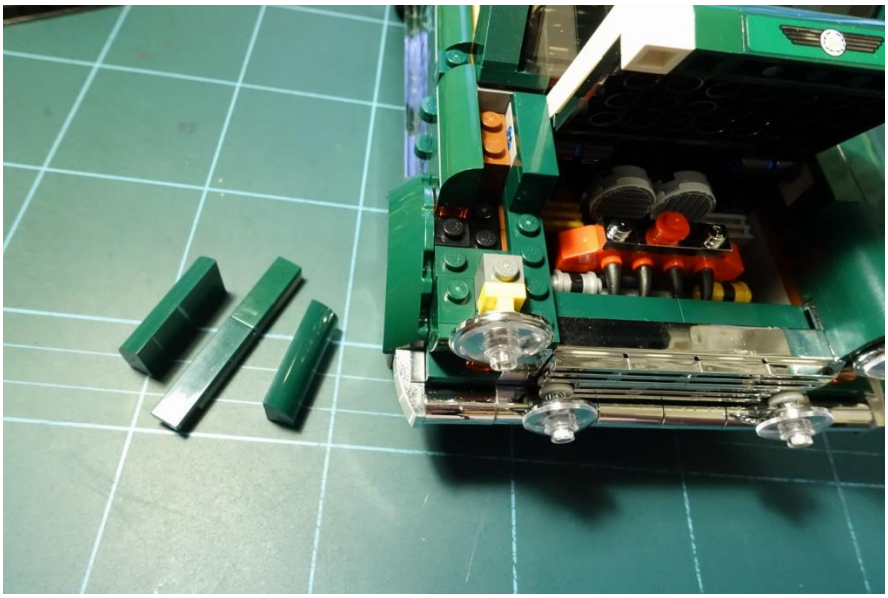
C. The front lights

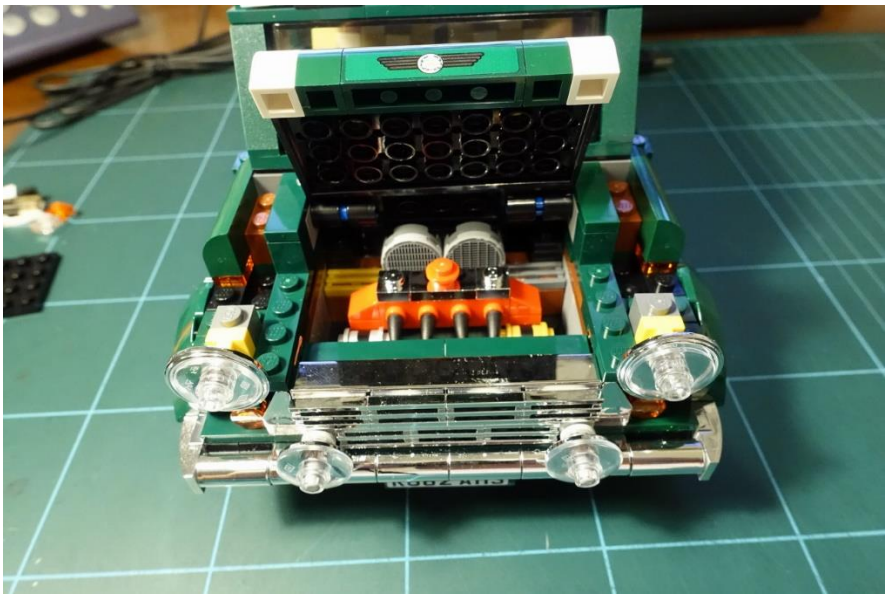
Remove the parts (shown below) near the front first



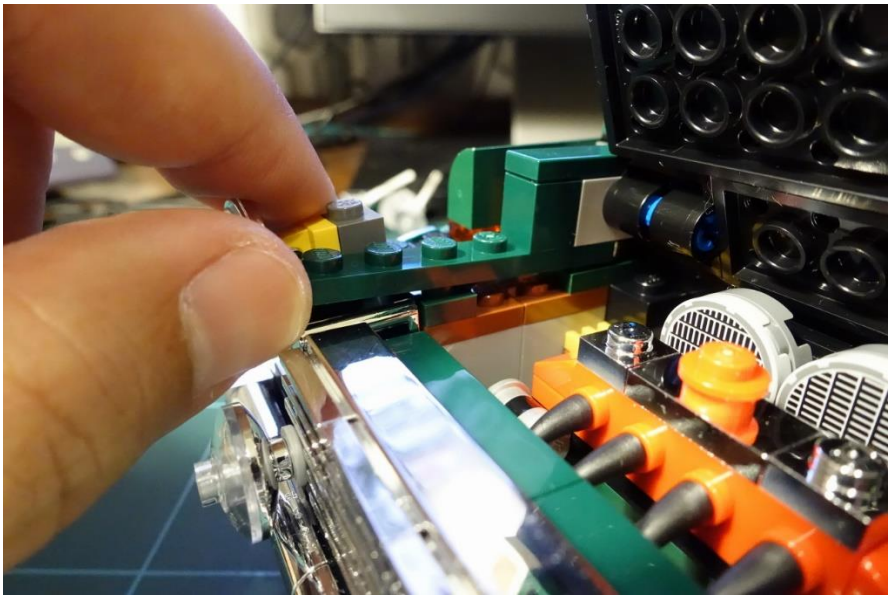


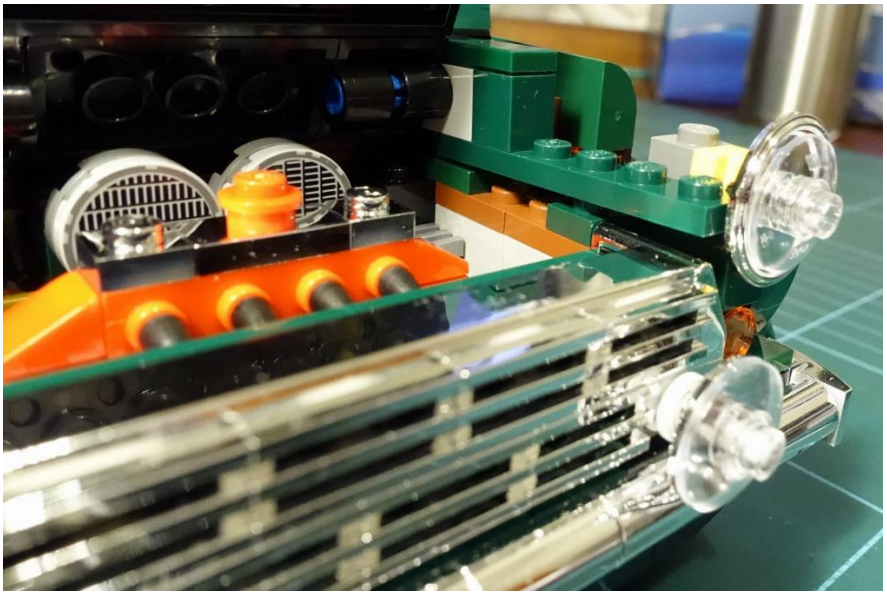
Remove 3 parts above the headlight on both sides



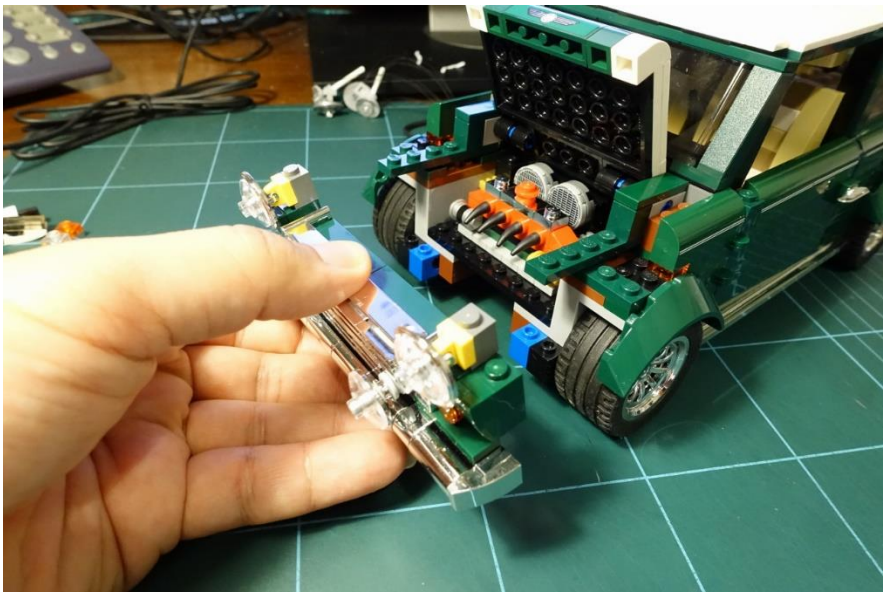


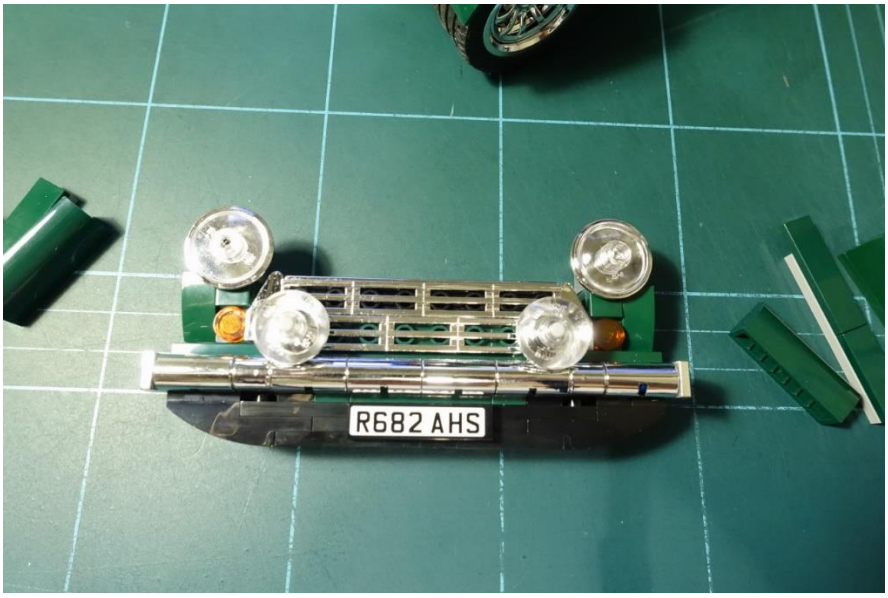
Lossen the green plates behind the headlights on both side



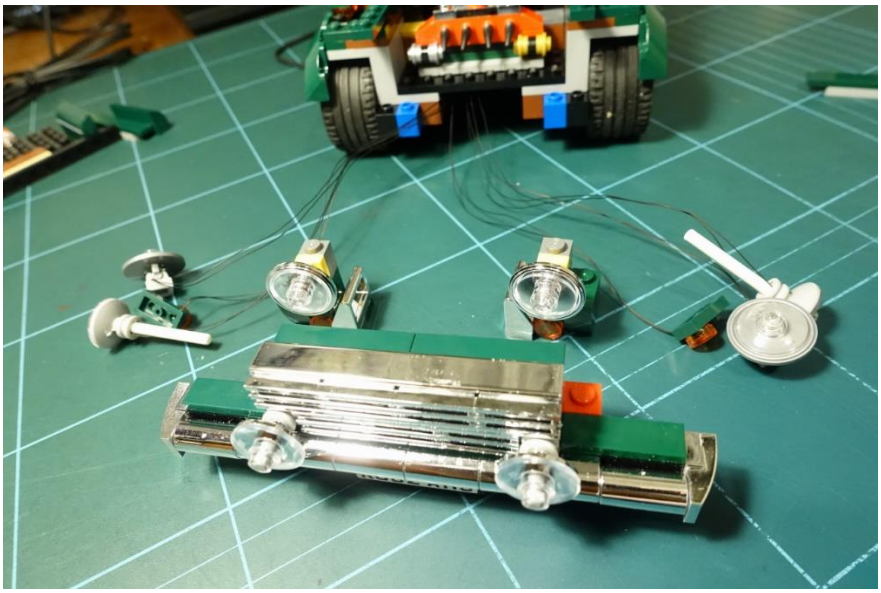


Detach the grill with lights (shown below)

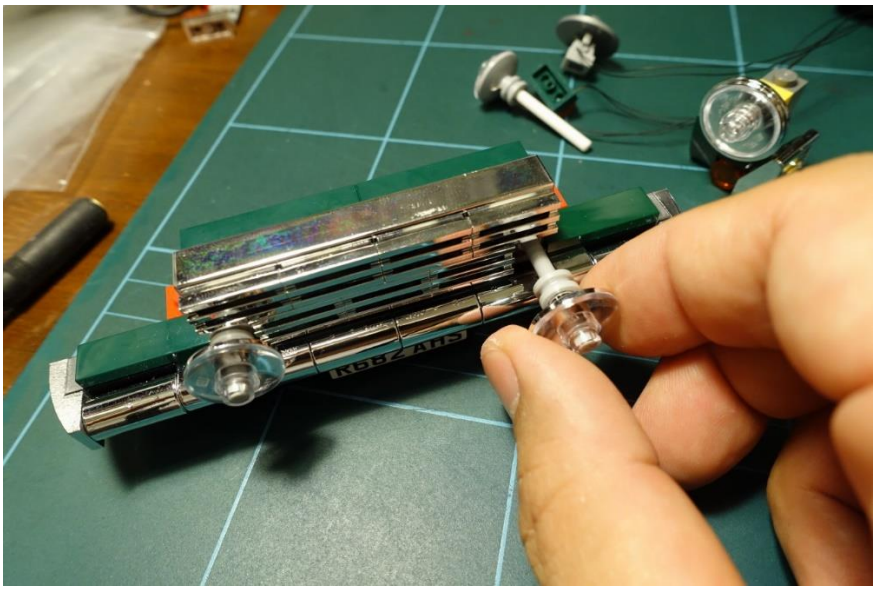




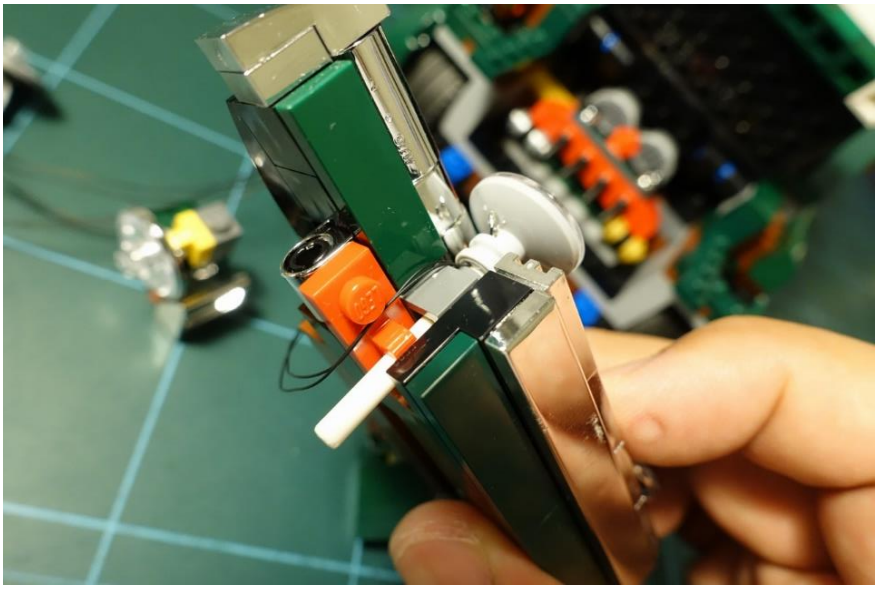
Detach the headlight units from the grill

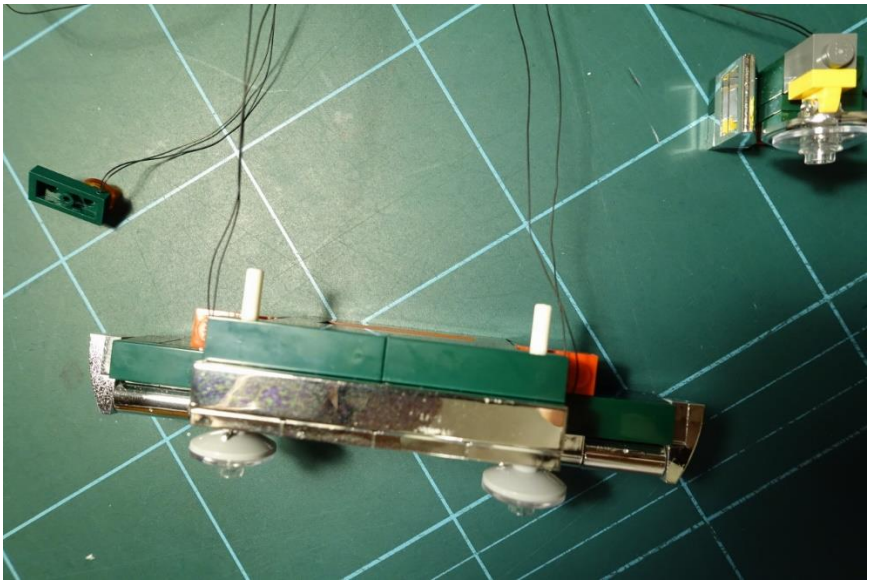


Pull out the fog lights together with the bar

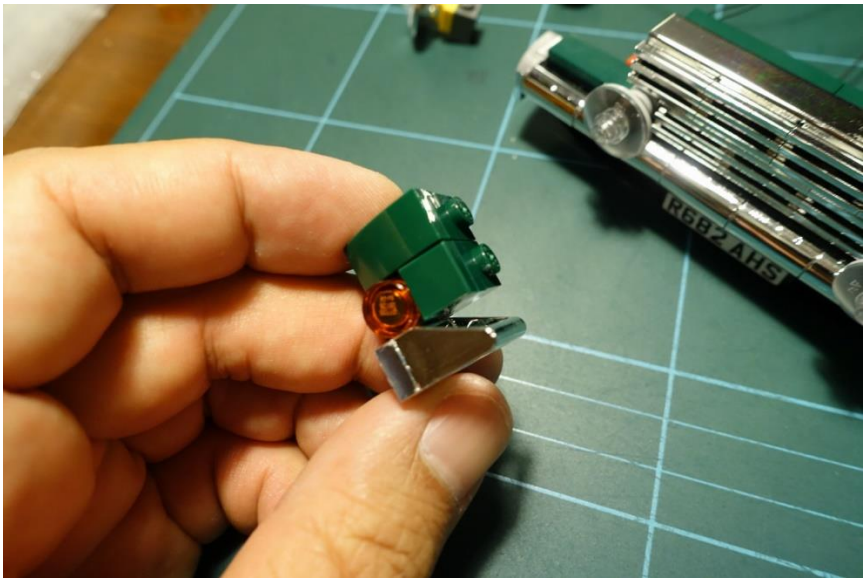


Push in the fog lights with LED

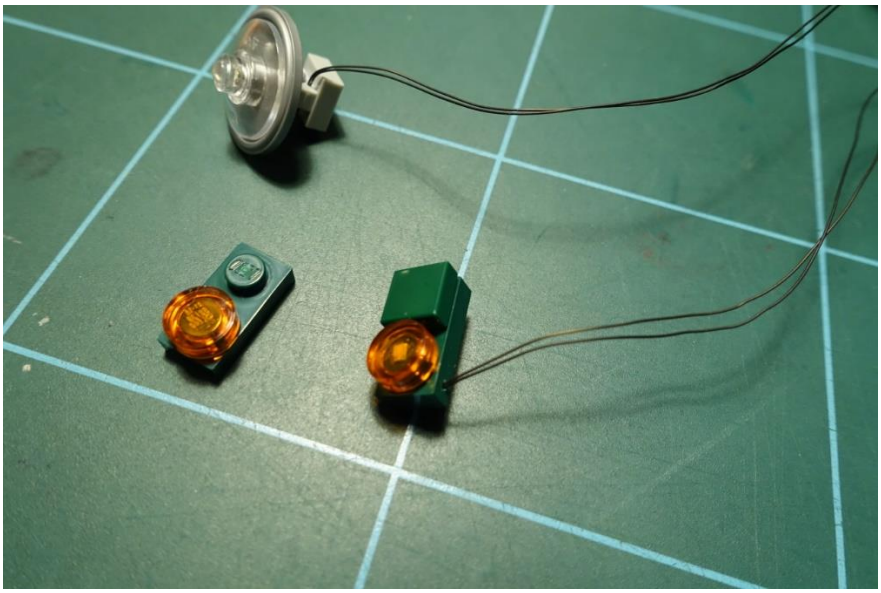




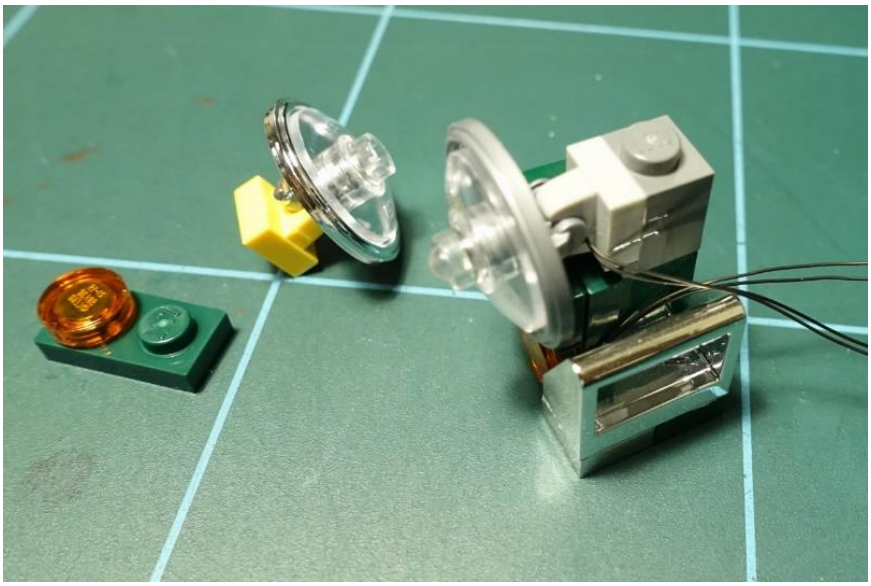
Remove the headlight with the gray bricks together from the headlight unit



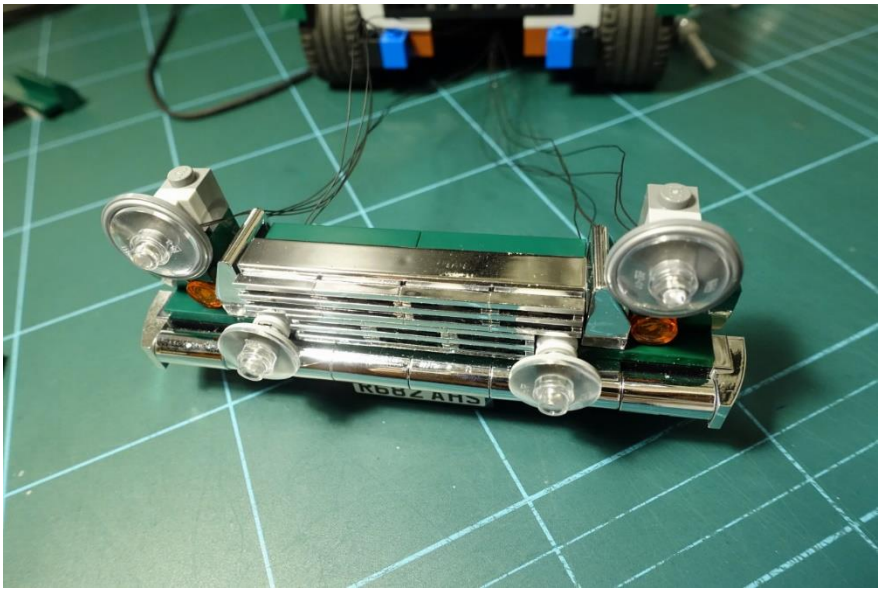
Replace the green plate with orange indicator with LED parts, and move the square tile to LED parts



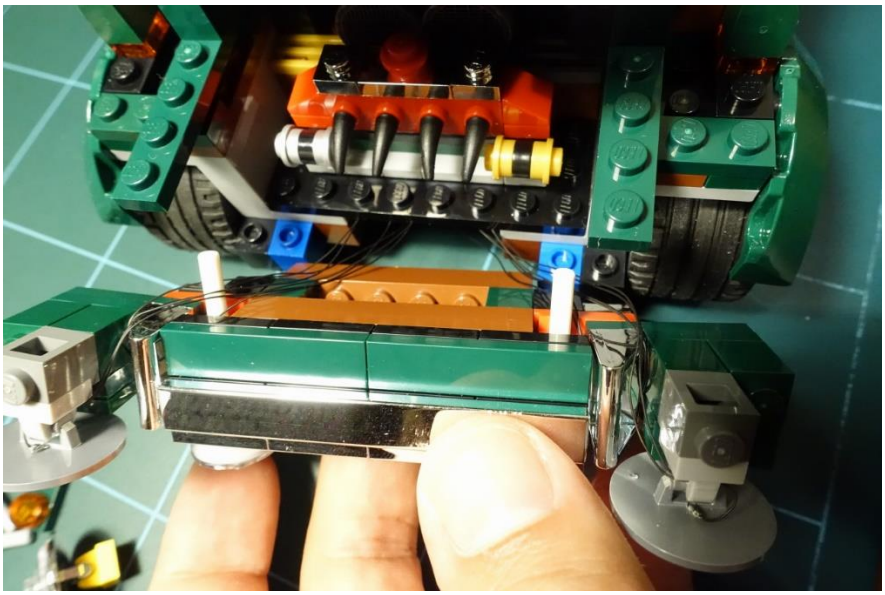
Attach the LED headlight to gray brick, then put the LED parts back to headlight unit



Put the headlight units back to the grill

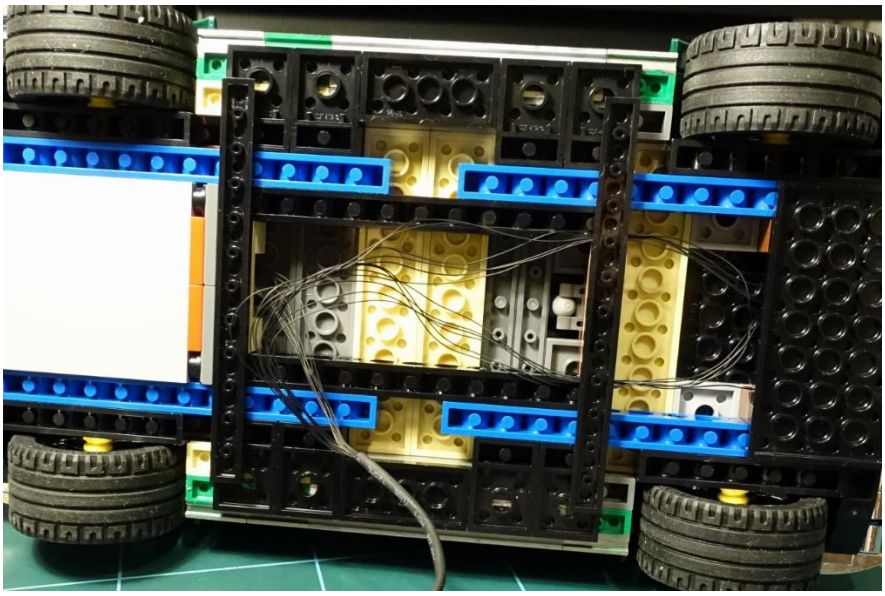


Put the grill with LED lights back, place all wires to the space under the engine



Tighten the green plates on both side and put back the parts at the front

Well, it’s almost done. Don’t forget the side mirrors.



Plug in the USB and it’s done. Cheers!
