

# Lego 10218

## Led INSTALLation GUIDE

Separate the building first

## Blue Building

A. Indoor and front lights

Take off the upper 2 storey.

Remove some parts

Remove the "PETS" sign

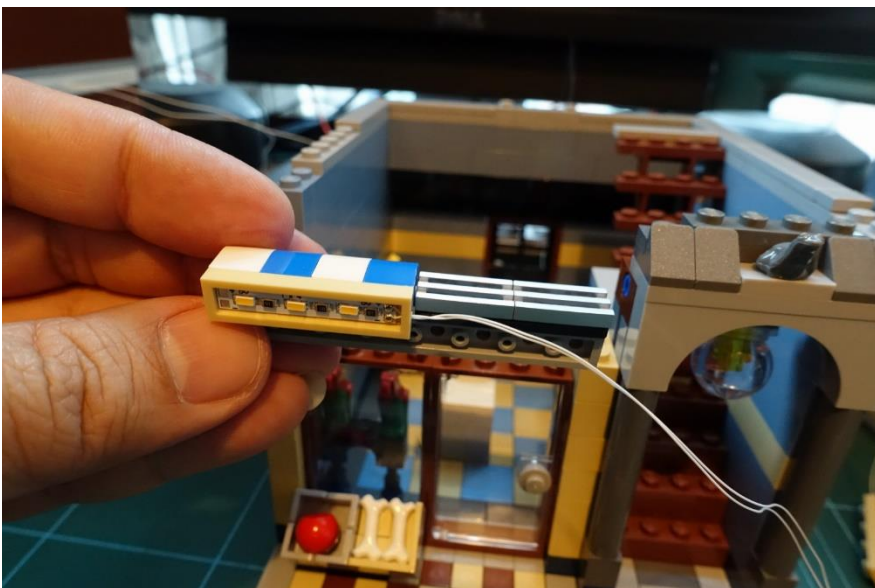

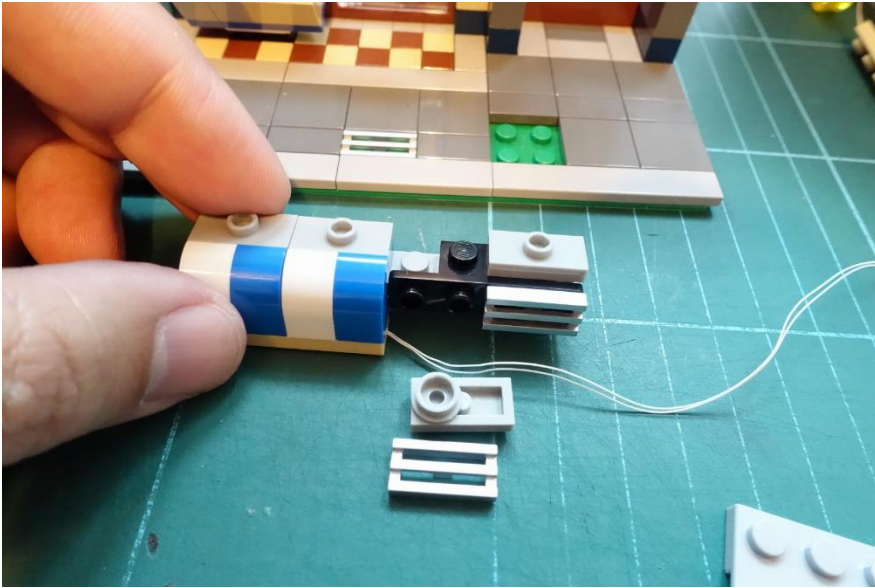

Remove the awning

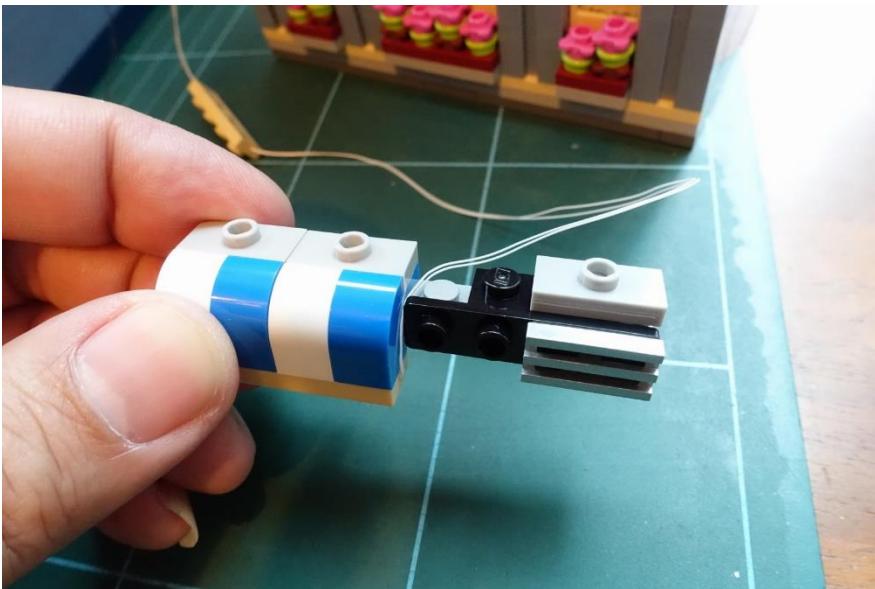

Install the end light plate under the awning

Move the wire to the back through the gap

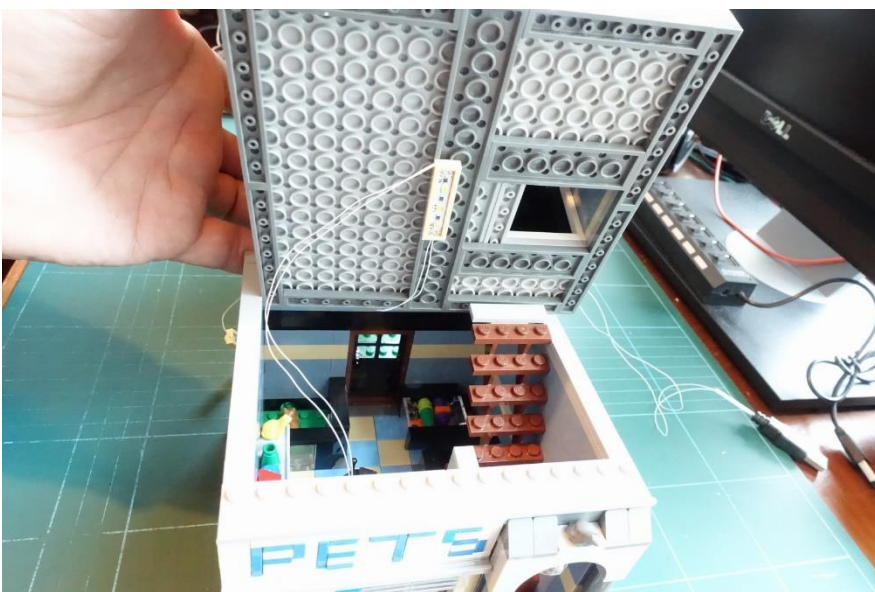

Put the parts back

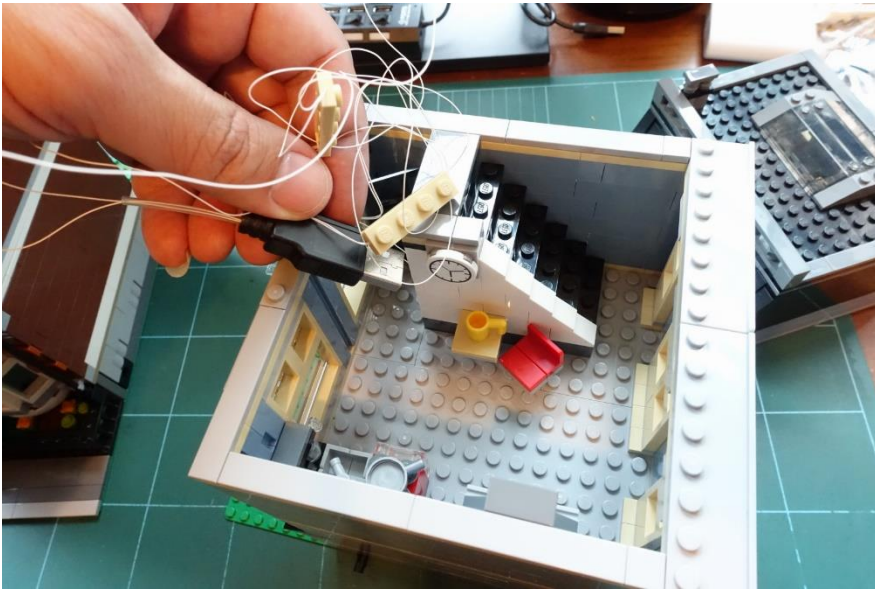

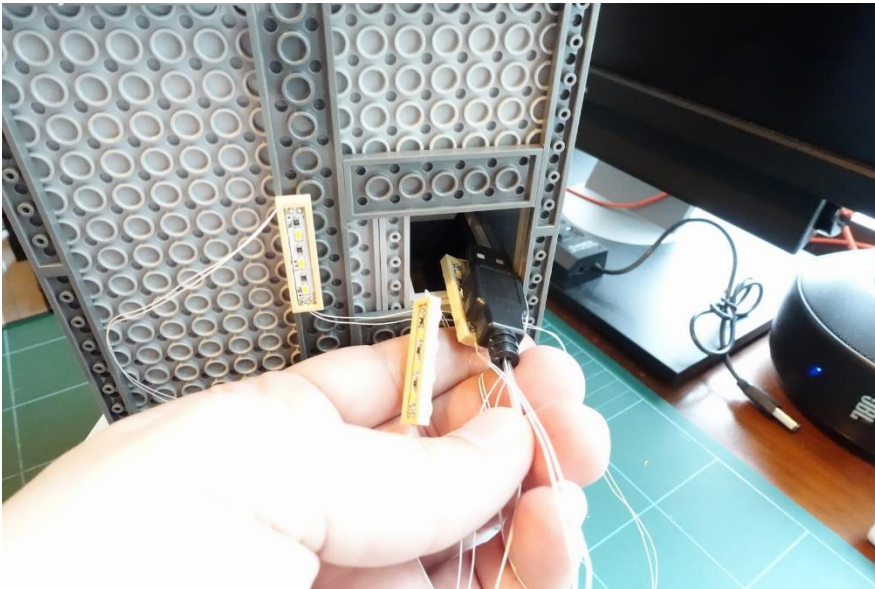

Install the next plate on the ceiling of ground floor

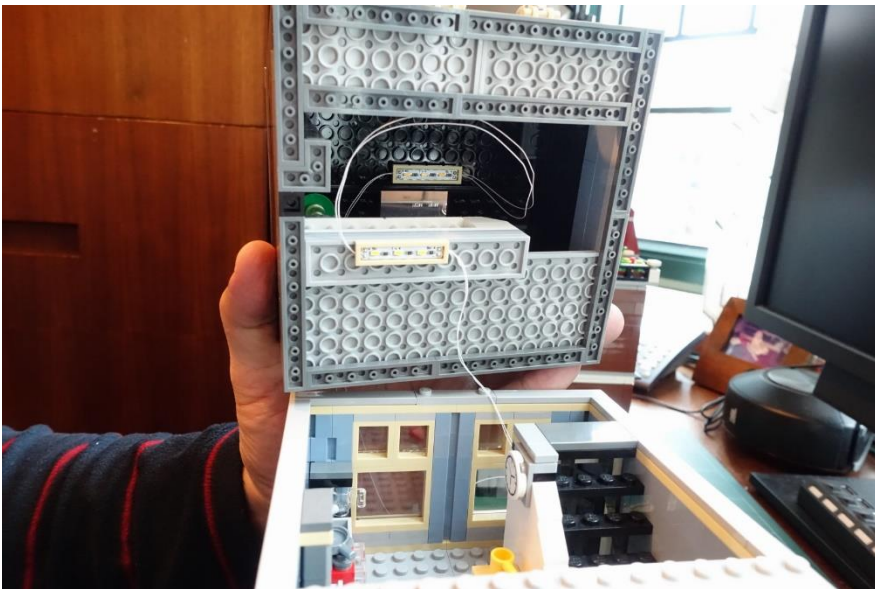

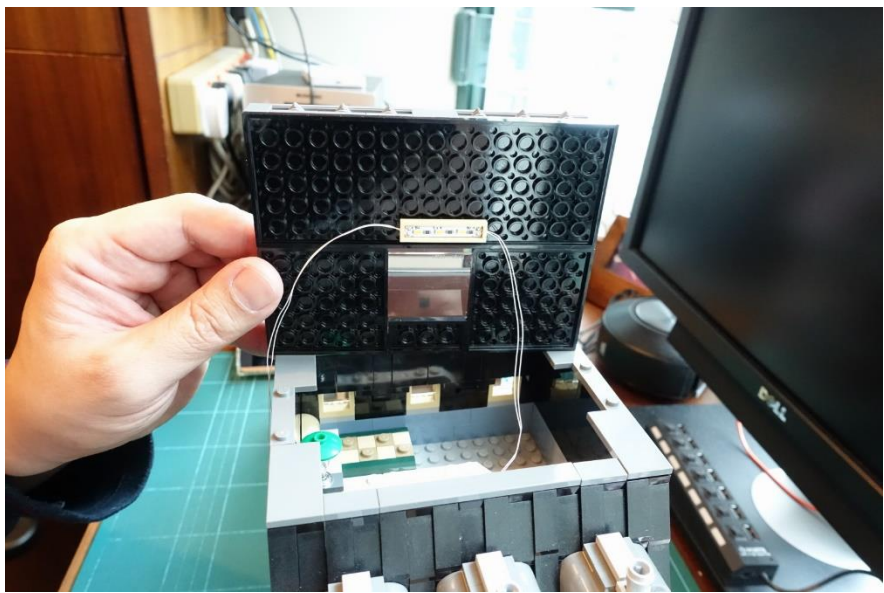

Move the other 2 plates and USB plug to the first floor

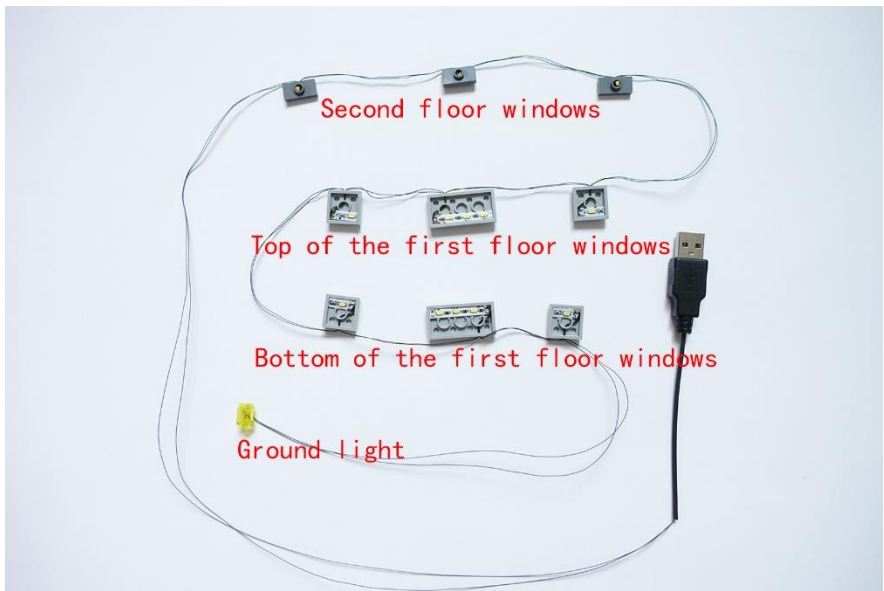

Install the other 2 plates on the ceiling of first floor and second floor

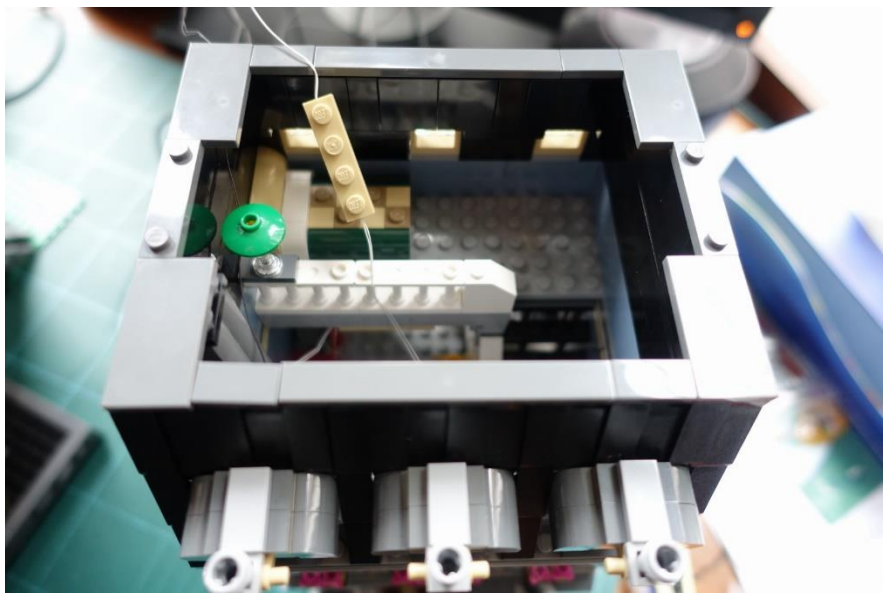

B. Windows and planters light

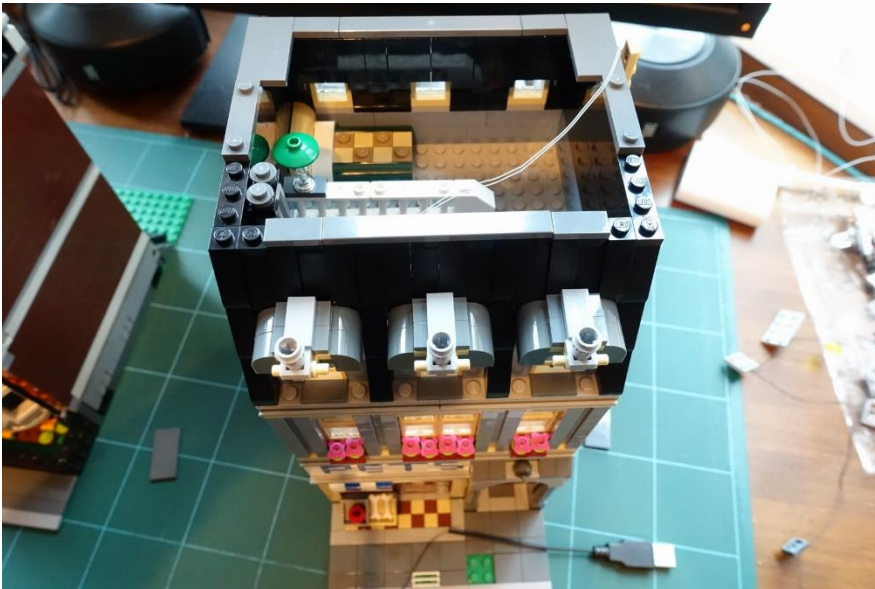

Take off the roof and light plate for easier installation

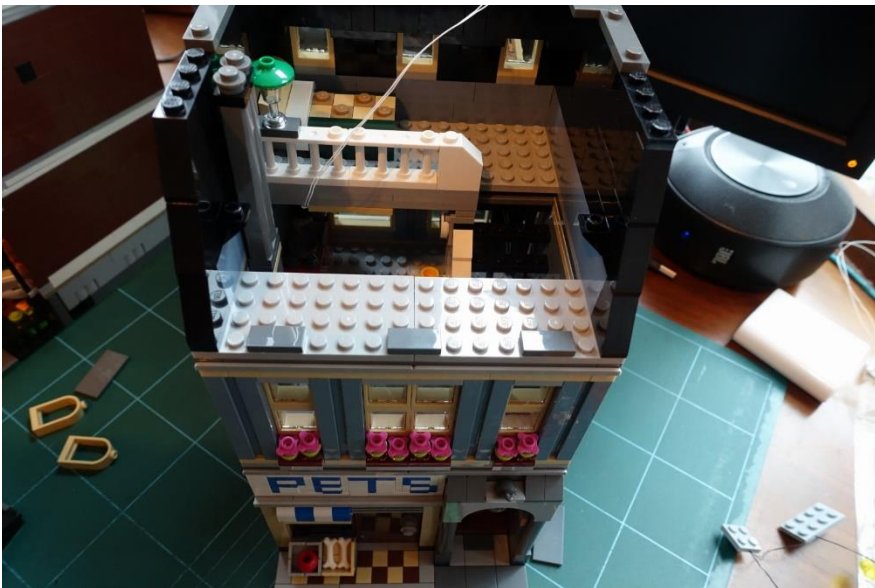

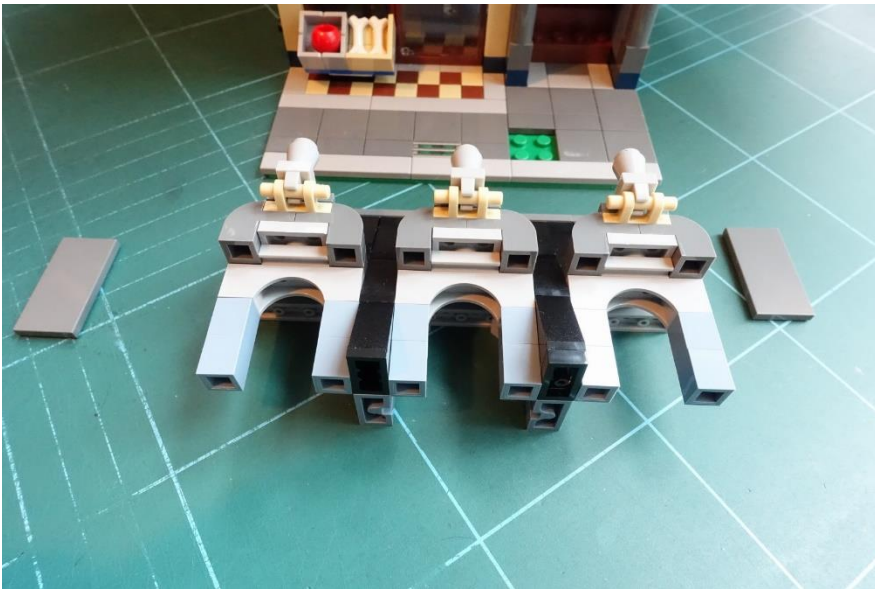

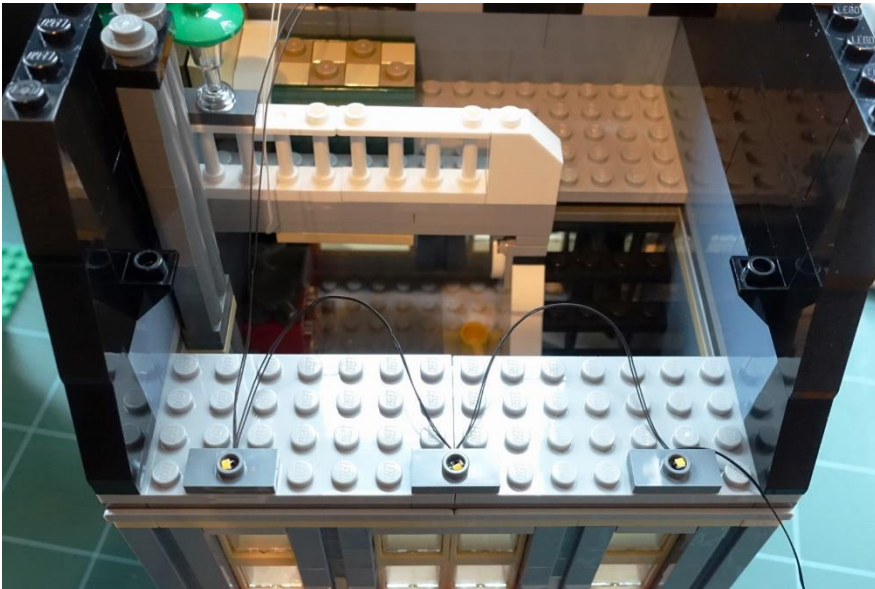

Remove the 2 x 4 tile on both corners

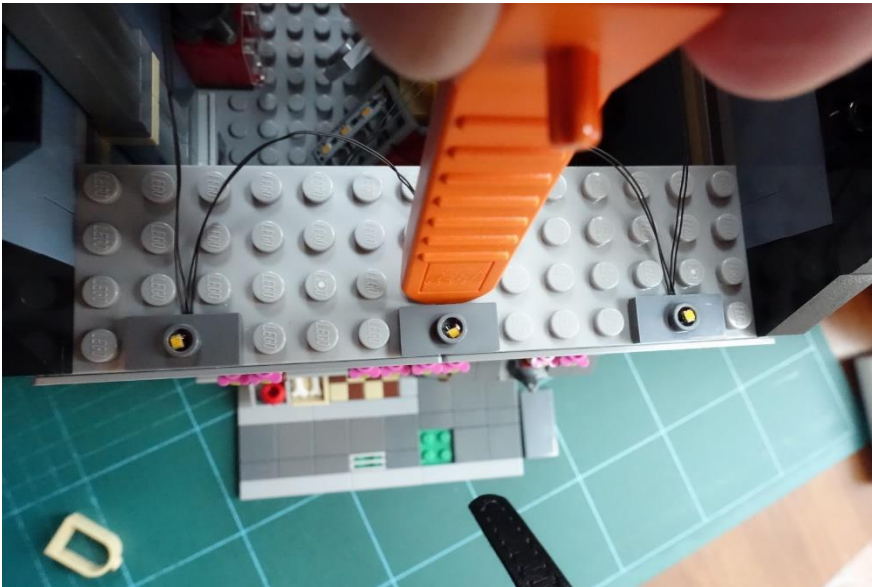

Take off the wall carefully

Replace the 3 dark gray tiles with light parts, move the rest of the lights to first floor

Press the wire by the sharp end of brick separator gently, repeat it on other 2 wires

Put the windows frame back, don't push too hard to avoid wire damage

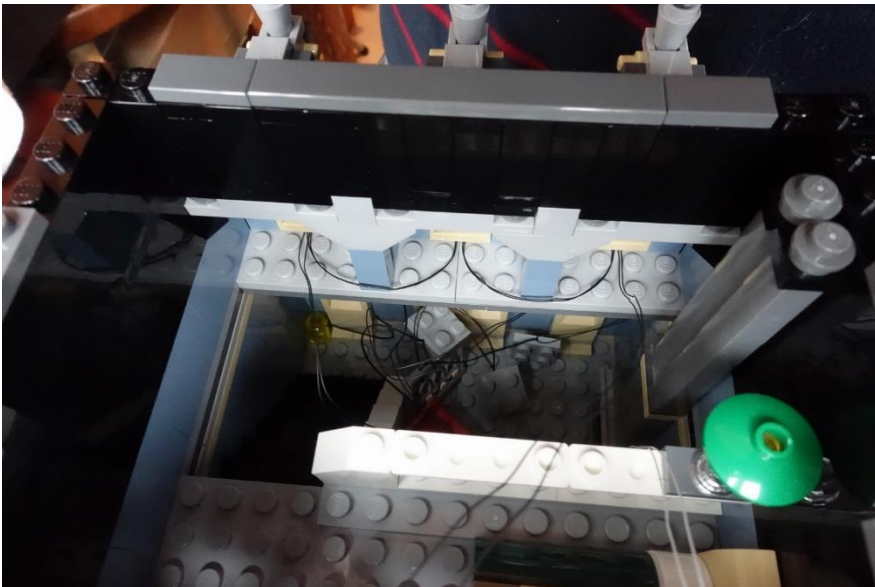

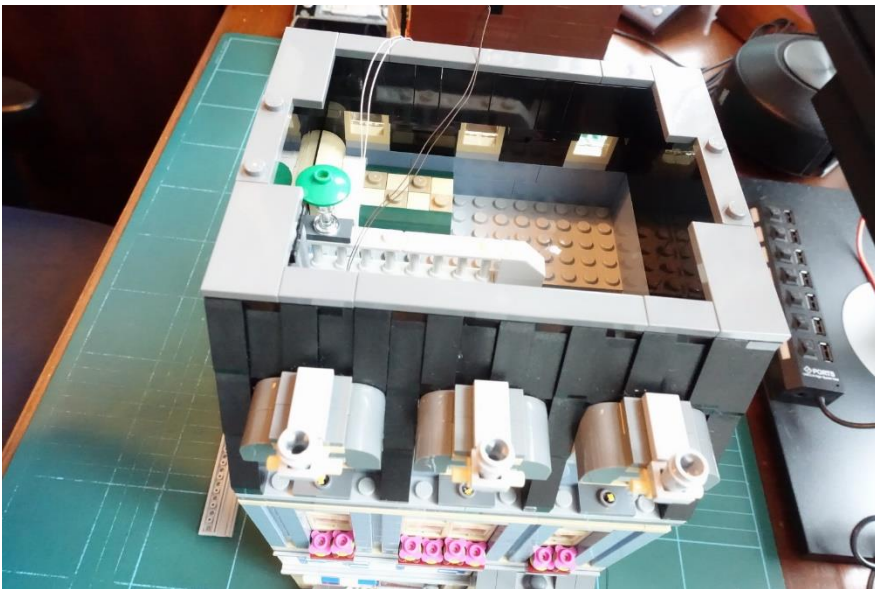

Put the wall back

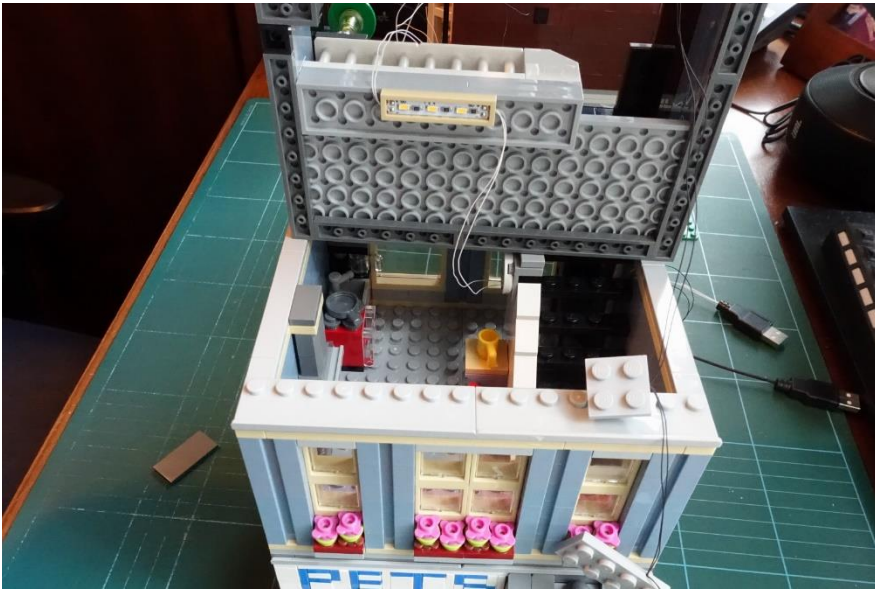

The wire inside the wall

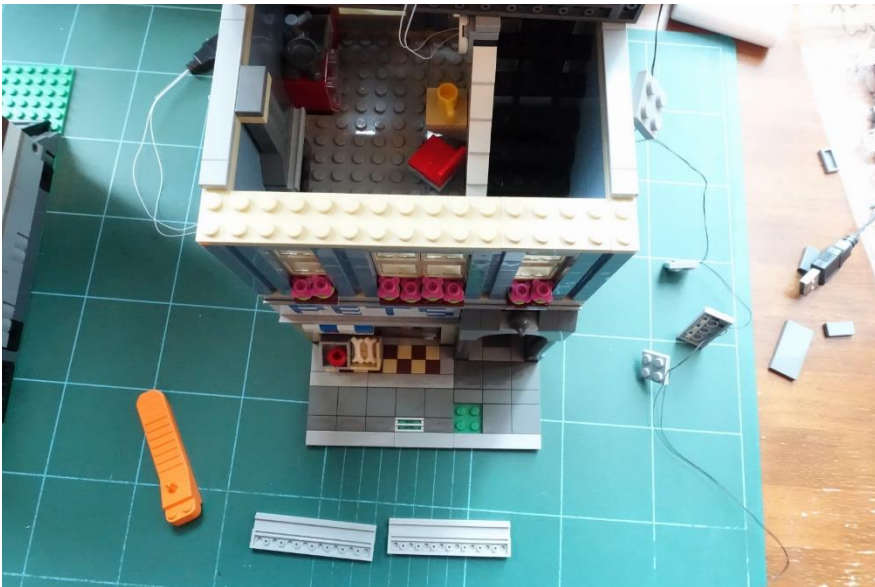

Put the tiles and roof back

The first floor

Remove some parts

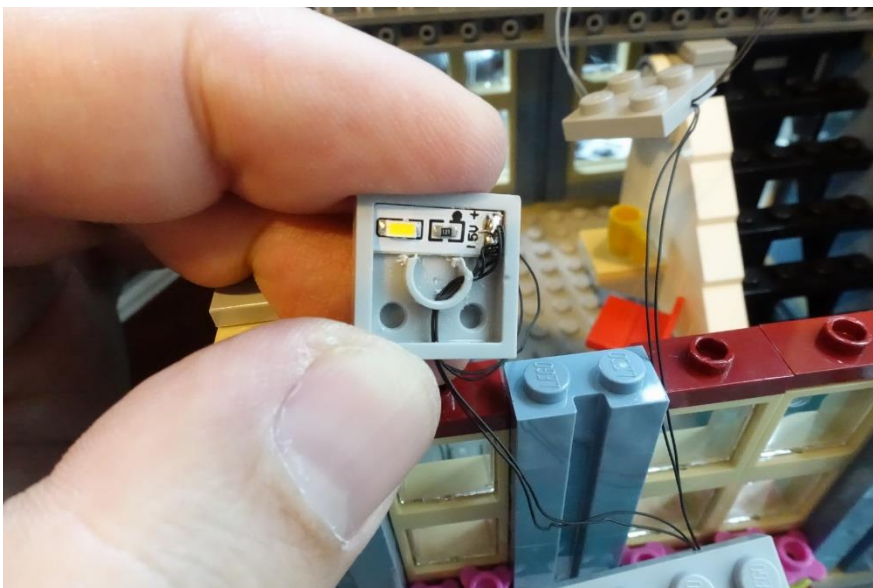

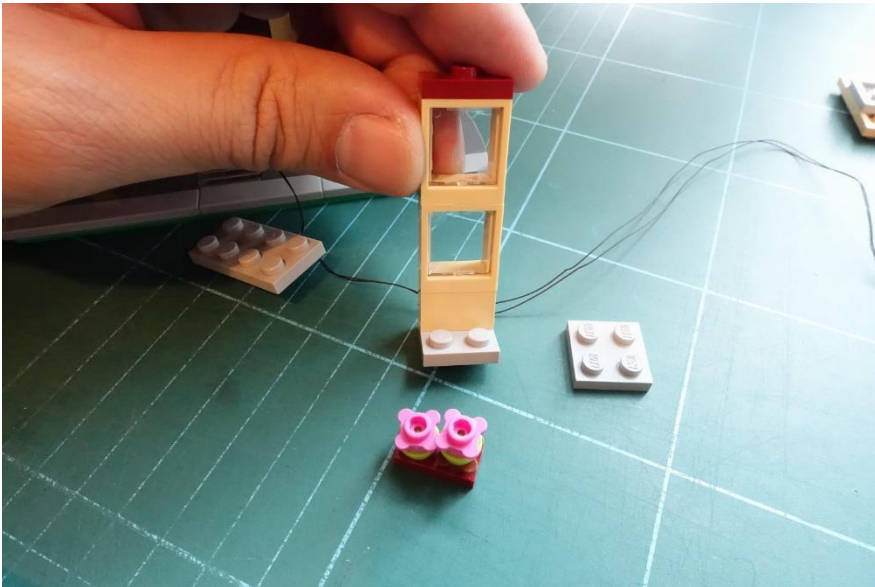

Take off the windows with planter

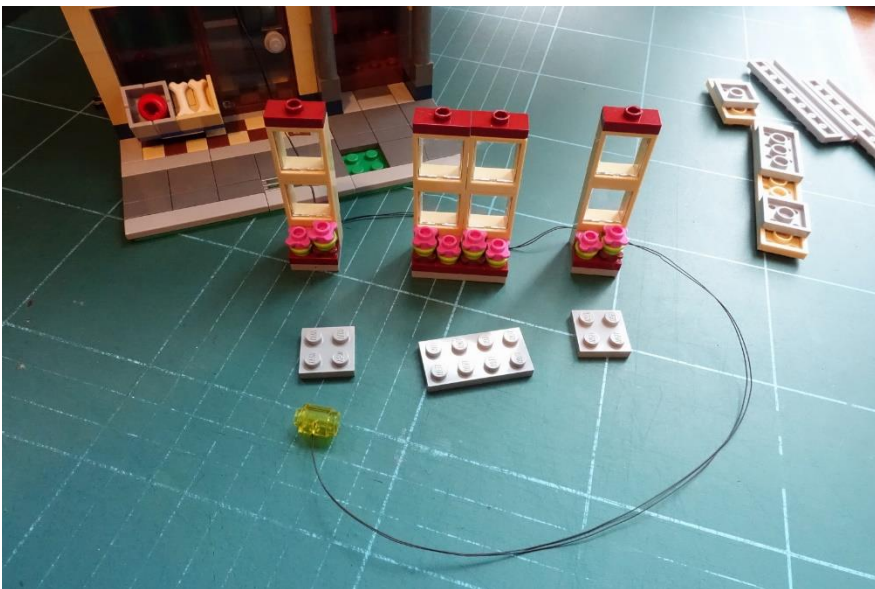

Replace the bottom plate with light parts (bottom of the first floor windows)

Wire at the back of the windows

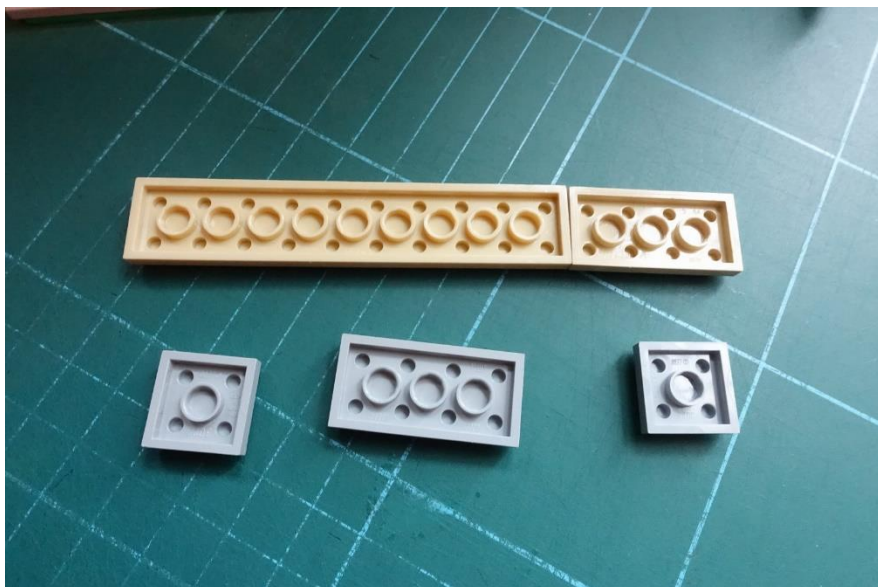

Put the windows back

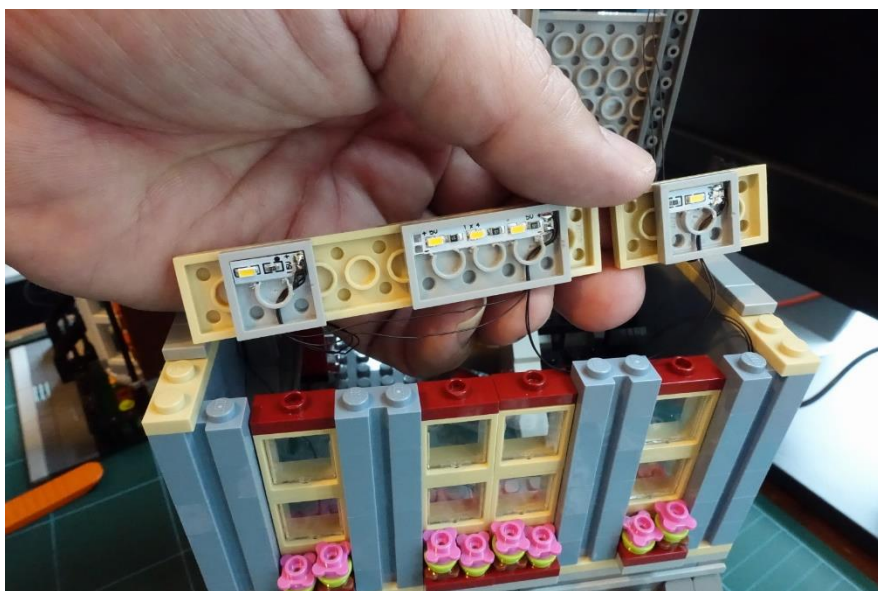

Parts removed from top of the windows

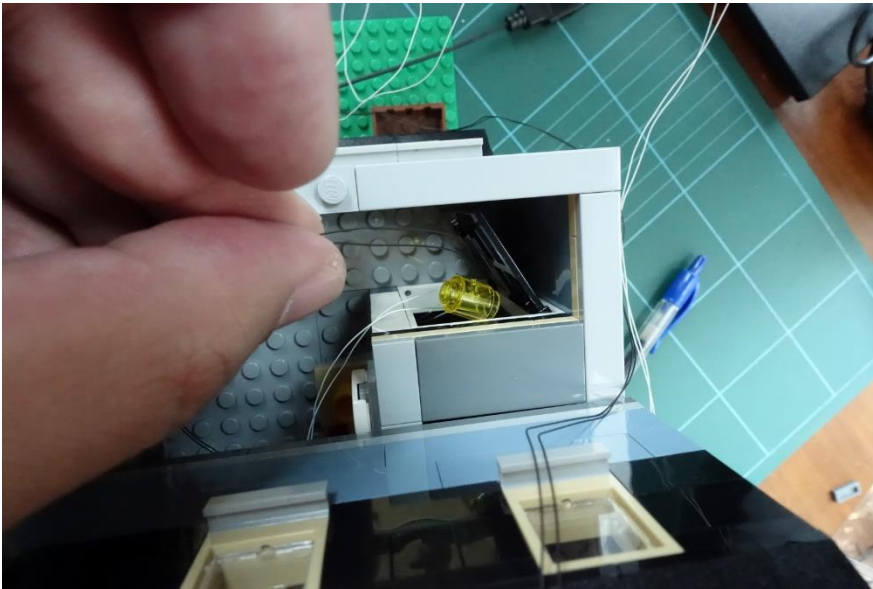

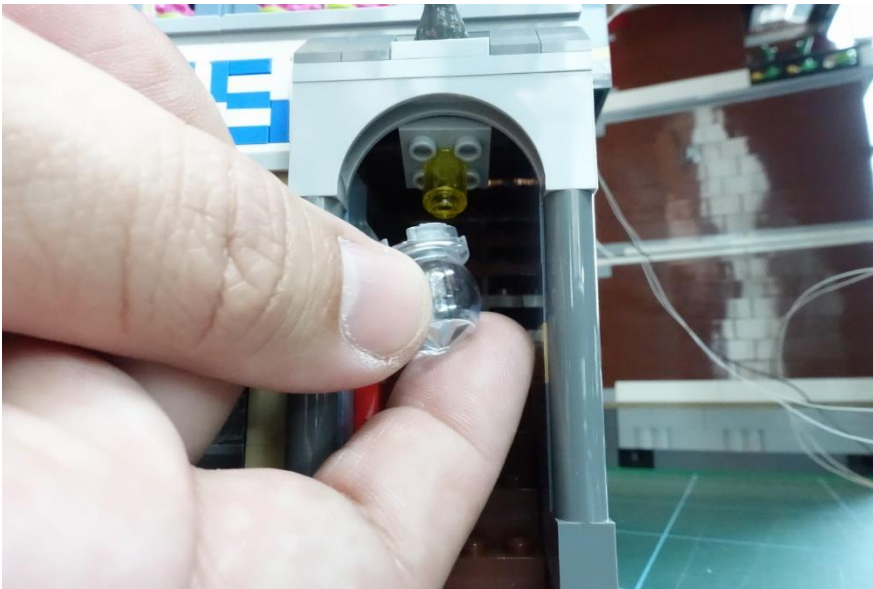

Replace the gray plates by the light part (top of the first floor windows) and put the parts back

Move the last yellow light to the ground floor through the door

Remove the globe

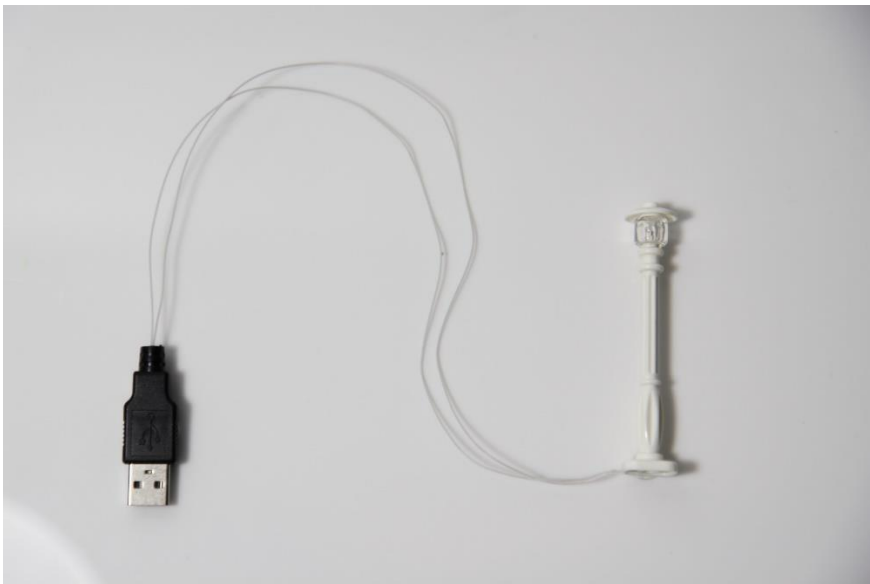

Replace the clear yellow round brick with light part, put the globe back

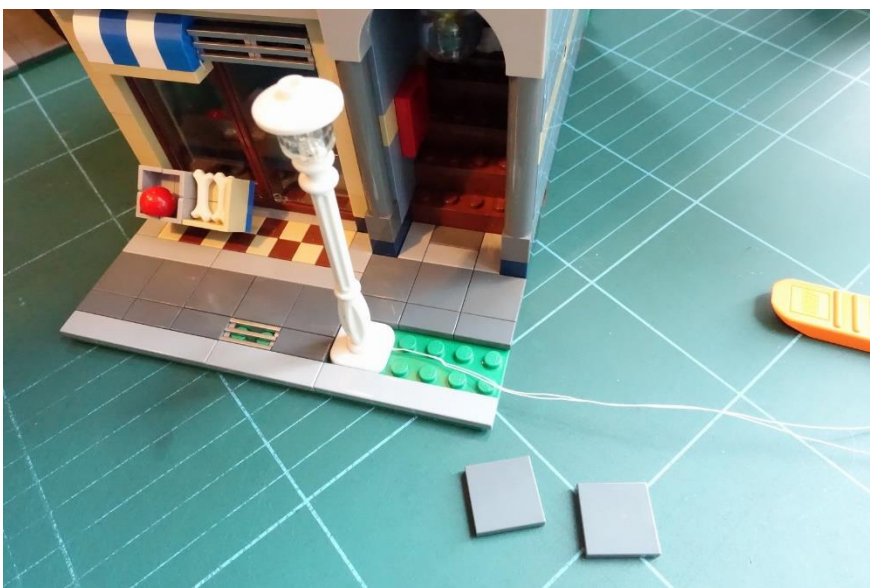

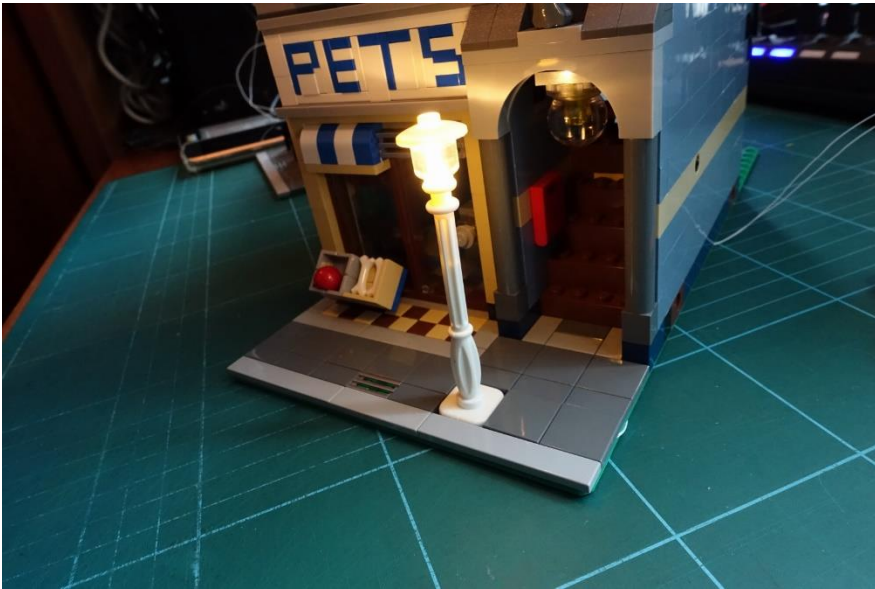

### C. Street pole

Remove the street pole and tiles by brick separator

Move the wire to the back of the building under the baseplate

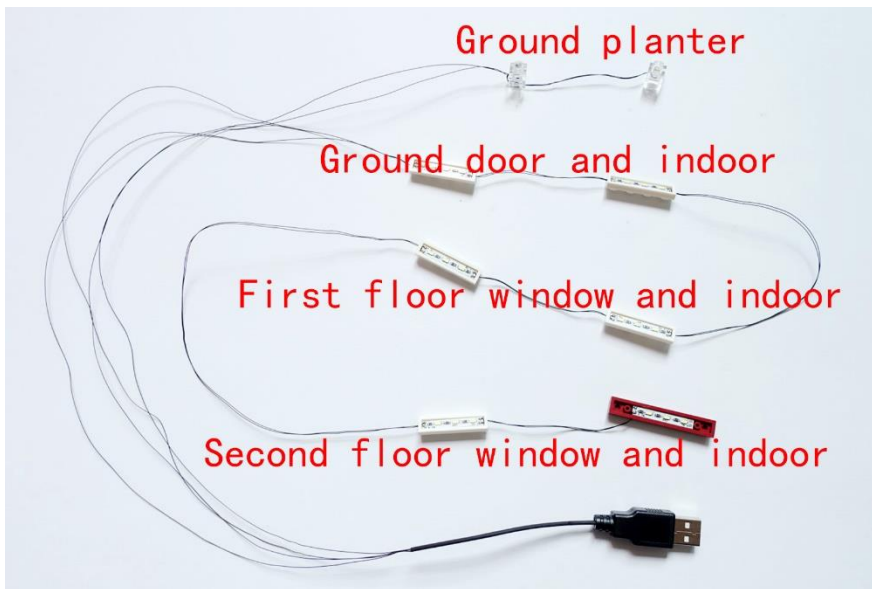

Plug in the USB

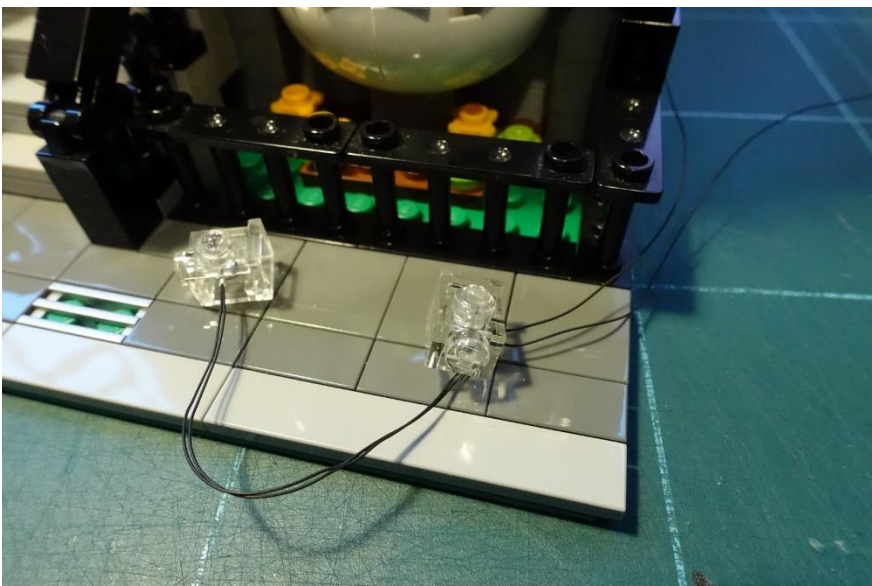

## Brown Building

Take off the upper 2 storey

Ground planter lights

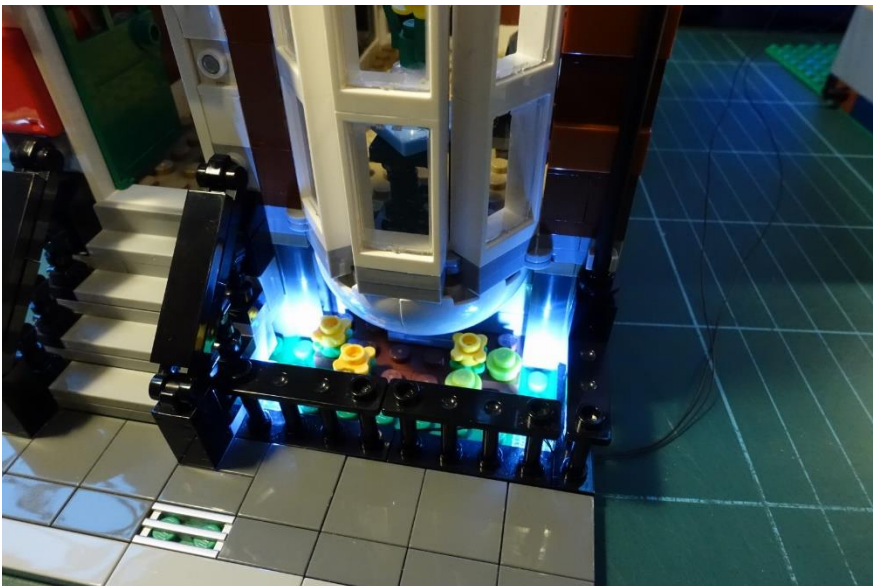

Remove the fences

Install the light towards building

Put the fences back

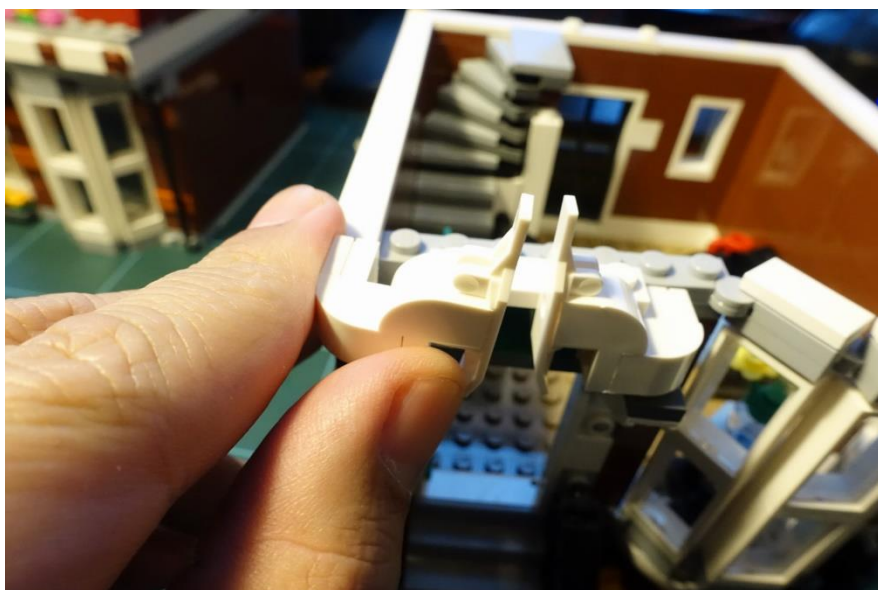

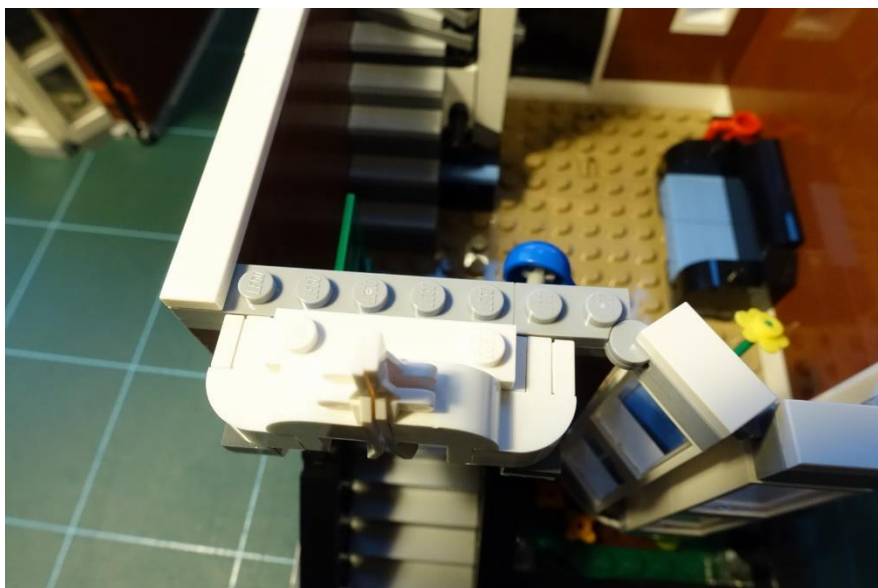

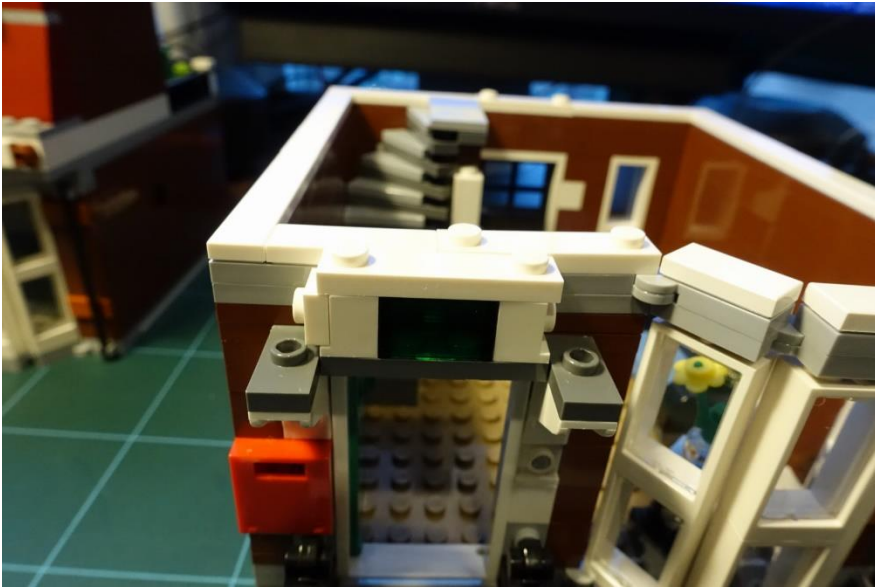

Ground door and indoor light

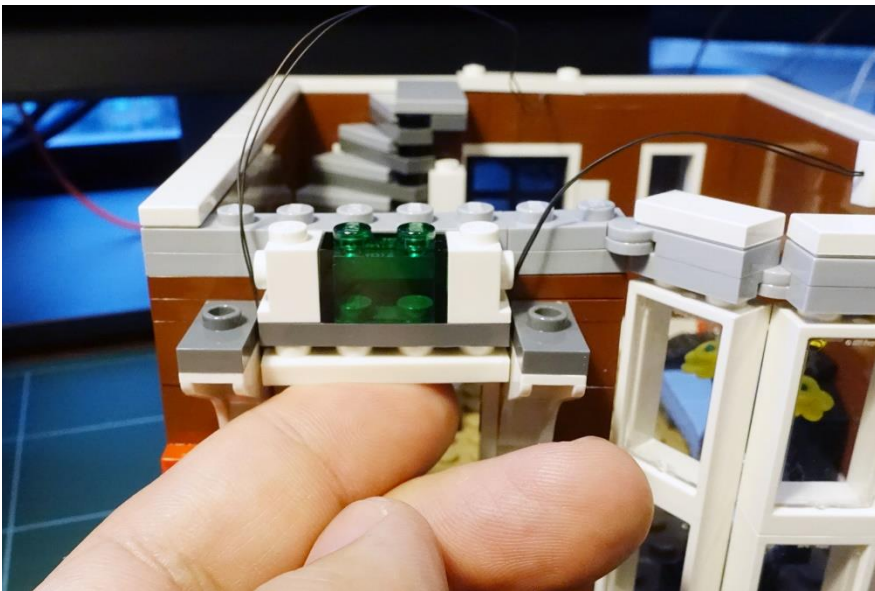

Remove some parts

Install the first light plate above the door, place the wire upward

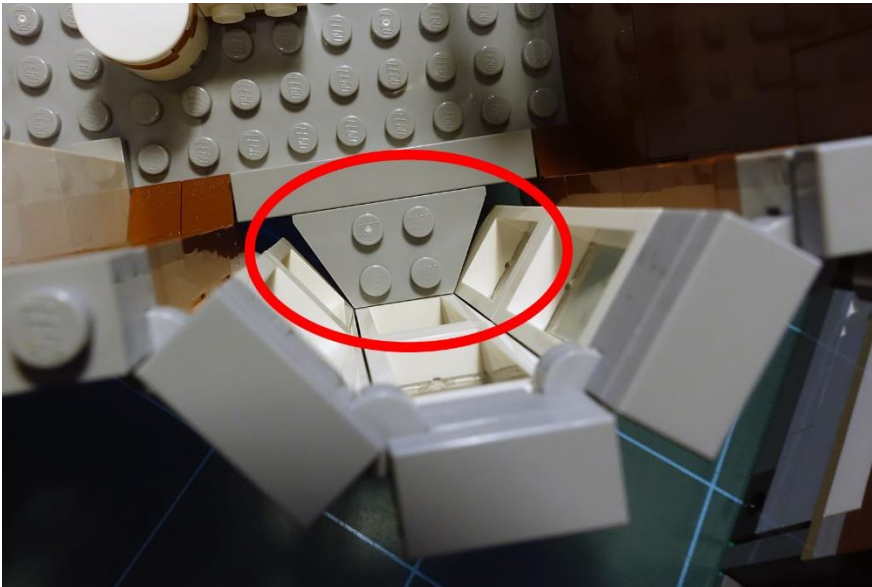

Put the parts back

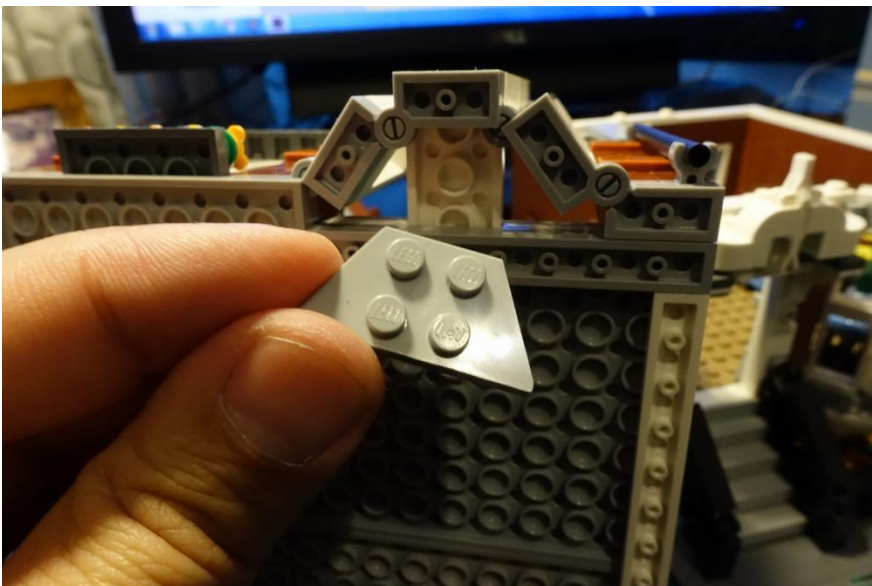

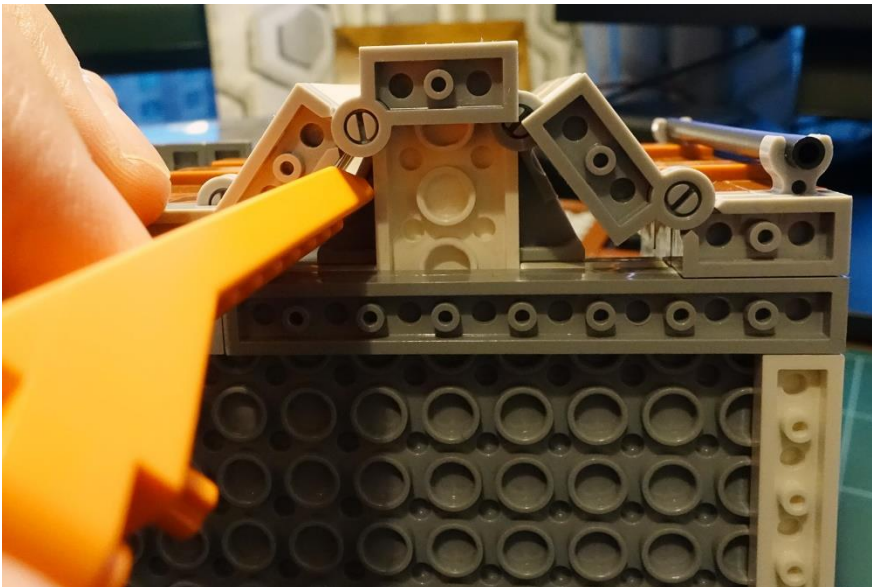

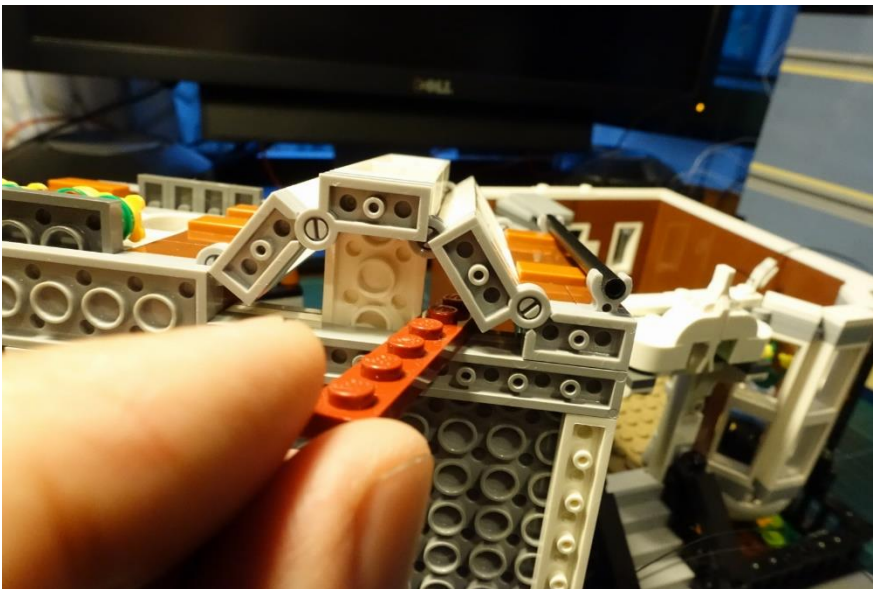

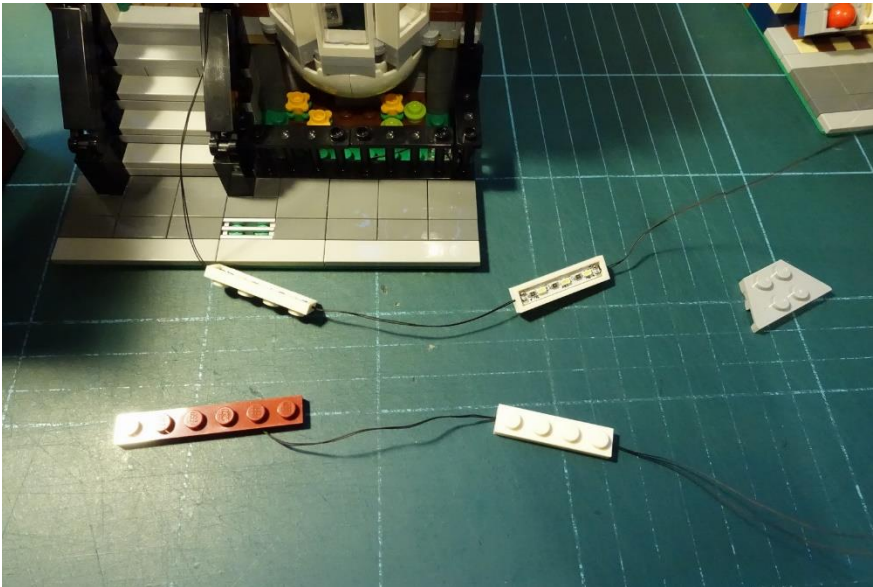

Before install next light, remove this trapezoid plate in the first floor first

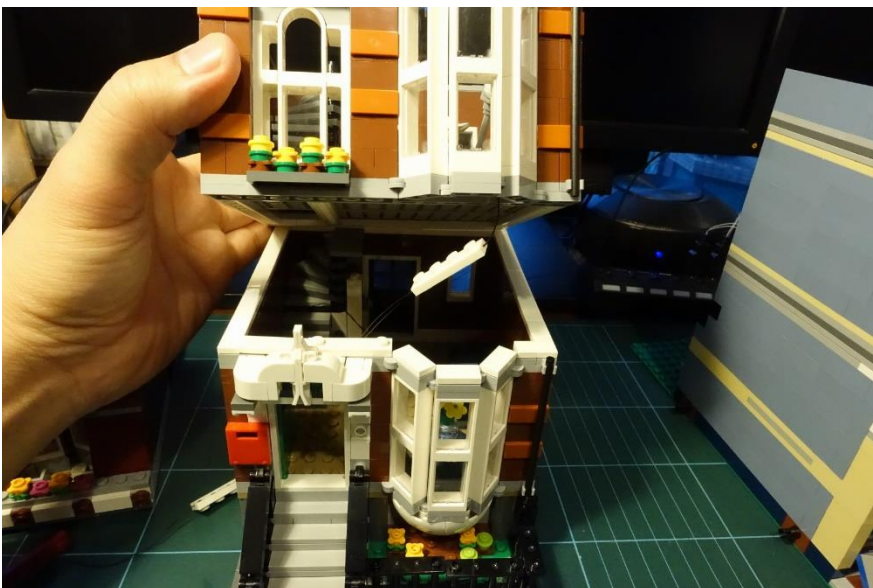

Loosen it from the bottom by the brick separator

Move the 2 first floor lights and 2 second floor lights through the hole

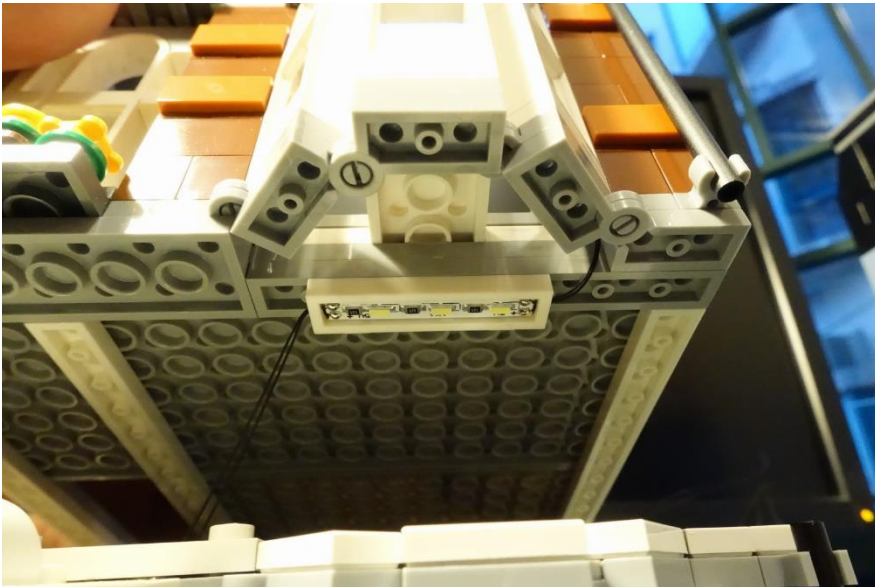

Leave the ground indoor light here

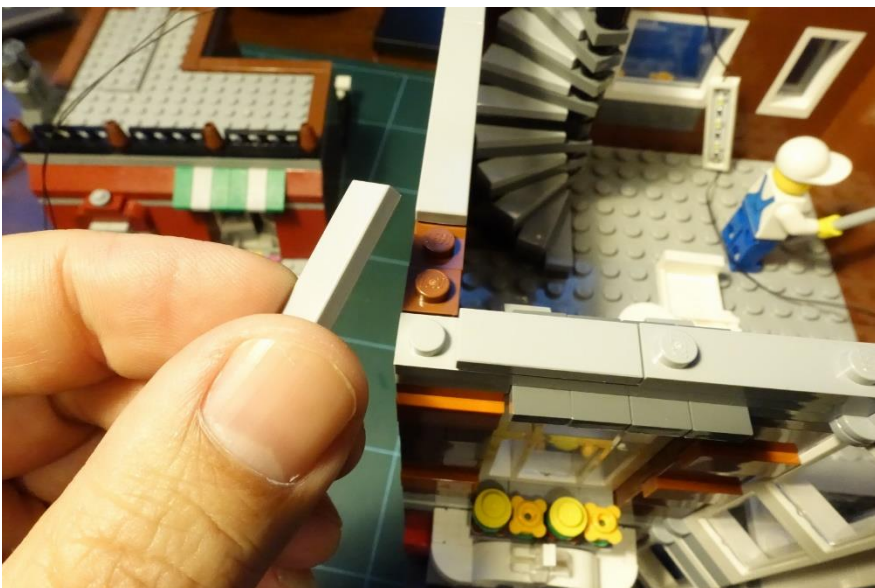

Install the light beneath the window

Put the trapezoid plate back

Put the first floor back and remove some parts

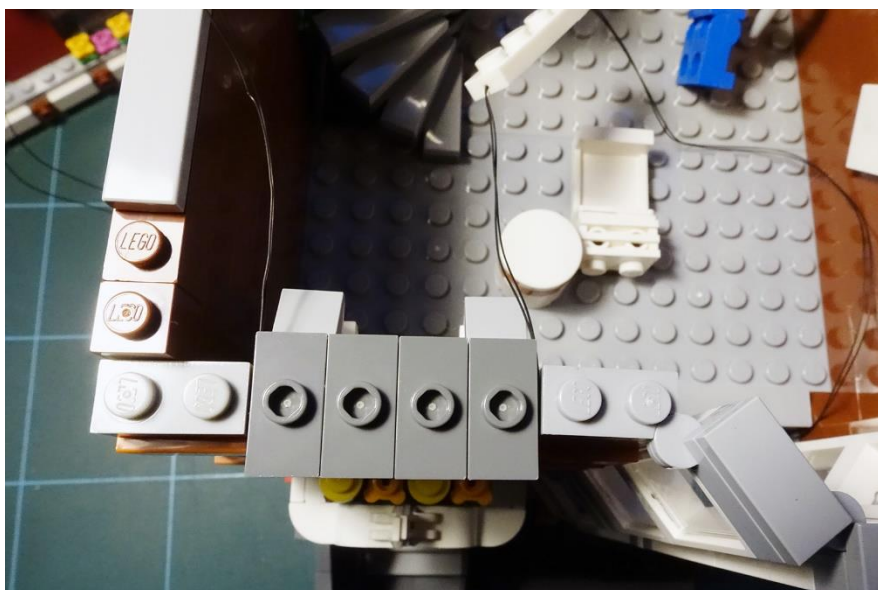

Install the light plate above the window

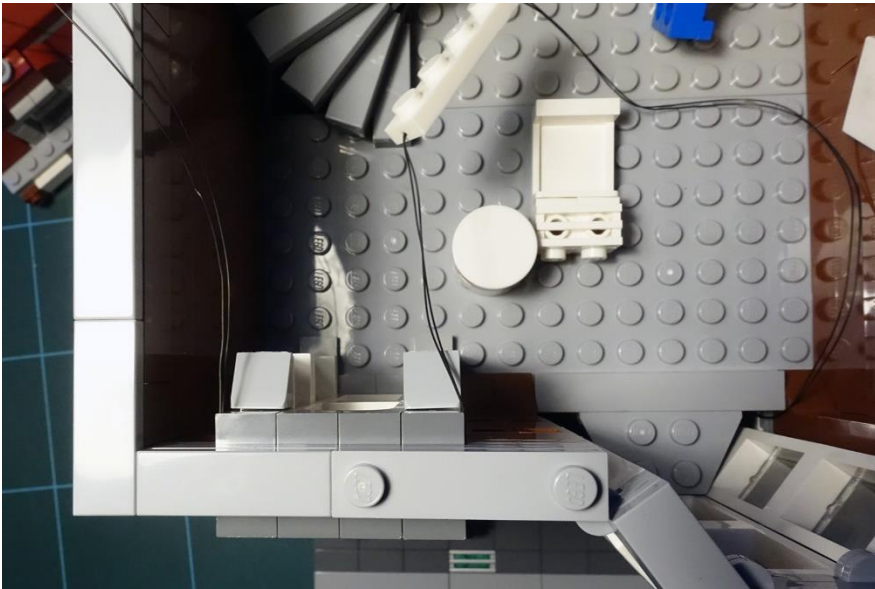

Move the wire inside the building

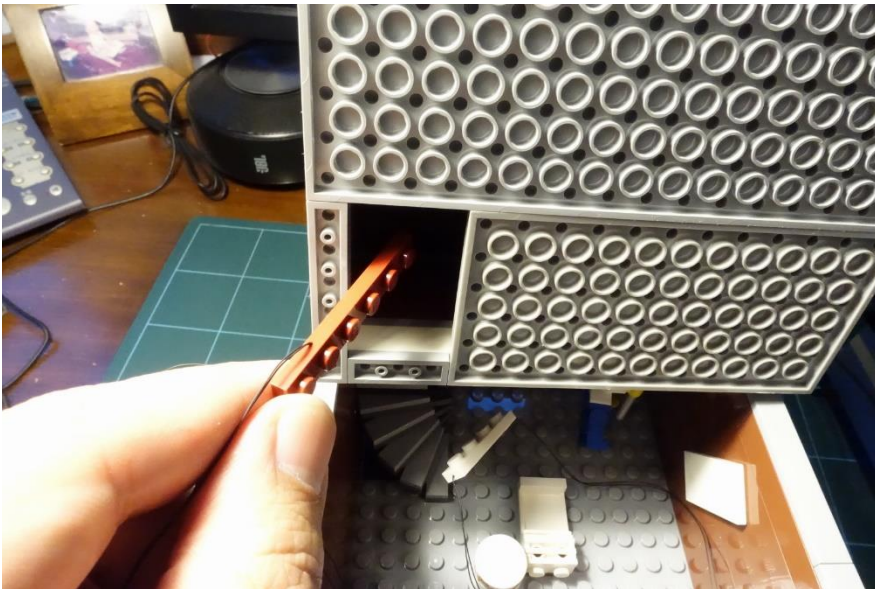

Put the parts back

Move the second floor lights through the passage

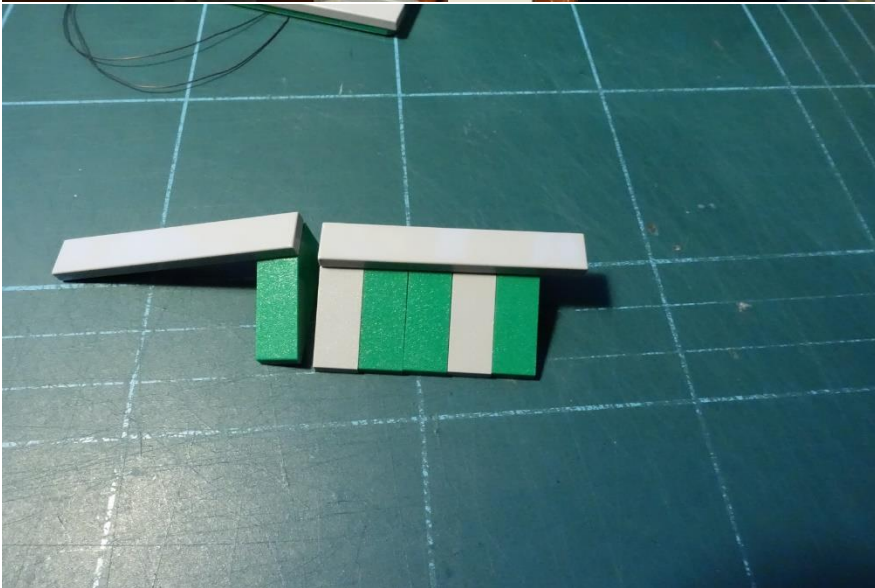

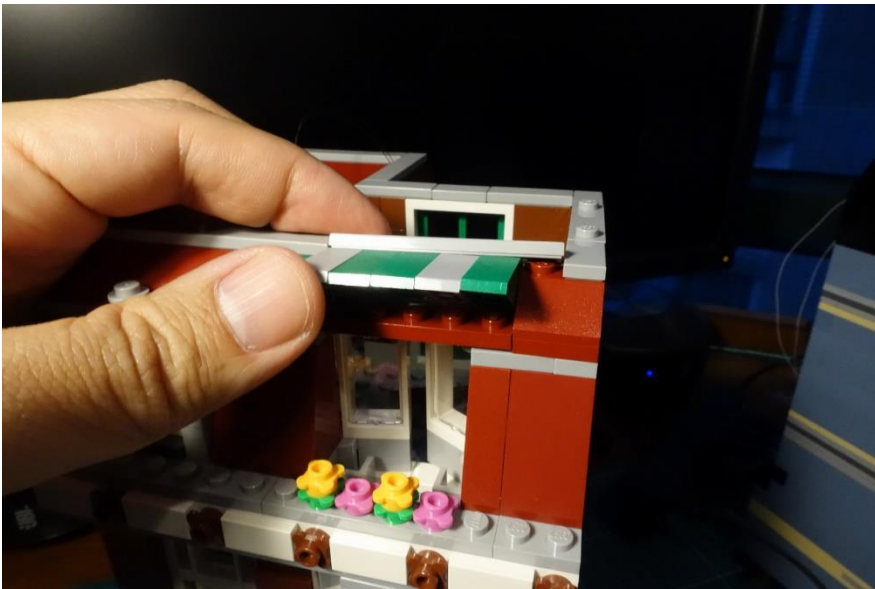

Install the first floor indoor light on the ceiling

Second floor light

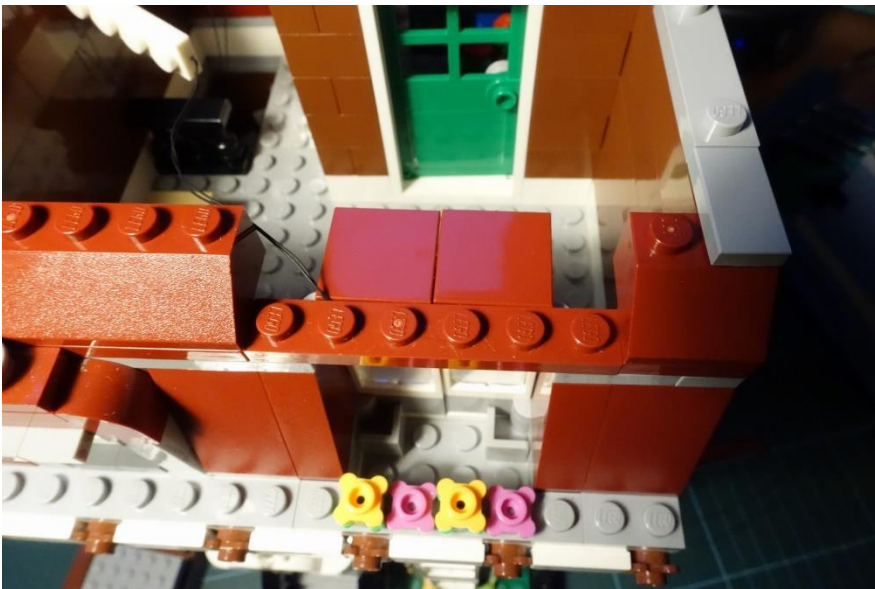

Remove some parts

Replace the dark red 1x6 plate with the light part

Put the parts back and install the last light on the ceiling

Plug in and done
