

Lego 75810

Stranger Things

Installation Guide

**GB GLOW
BRICKS**

Start by installing the car lighting kits

Split the front part of the car as shown (the parts inside circle will be taken away)

Install the separated parts to the lighting parts

Then install it to the car, take the wind shield away and pass the wires into the car

Put the parts back then turn the car around

Split the parts out from the rear side of the car as shown (the parts in circle will be taken away)

Install the lighting parts start from the bricks then put the red tiles back on

Then put the rest parts back to the car

Install the interior lights

Pull the signal lightings to the top and hide the wires by the tiles

Now it's turn for the house, we first do the bright side

Start with removing the roofs

Turn the house around, remove the left side ceiling

Install the lighting parts with clear round plate and round brick, the 1x4 plate will be reserved as ceiling light

Then remove the ceiling on the right and install the ceiling light

Restore both side of the ceilings

Install 4 1x4 plates as shown and restore it on top of the house

Take the clear round tile from the model to put on the lighting 1x2

Then put the roof back

Split the string out to combine with the lighting parts, then put it back
(The order has to same as the original)

Now take these lighting parts out for the shadow side

Take the roofs off and take this lighting parts ready

Install the lights on the seats

Now turn the house around take the lighting parts with 2 1x2 connected and install them on the sofa as shown

Put the 1x4 black on the floor

Remove the ceiling and the wall the pull the clear lighting parts through to install them

Put the wall back and connect with the wires at front door side

Same as the bright side, exchange the lighting parts to the string

Restore the string and the roofs then the house part is done

The final step will be the lights for the trees, install the right handed side tree then connect with the other blue lights

*Remember the lights on the left side has to connect with the green lights side, it has to be ended with the bigger connector

Install the lights on the tree and leave the plug out

Then it's green lights turn, also turn the house upside down

Install the lights on right handed side tree and connect the plug

Then install the lights on the left handed side

Put the car on, connect the plugs to USB and it's done
