

# Lego 10277

## Crocodile Locomotive

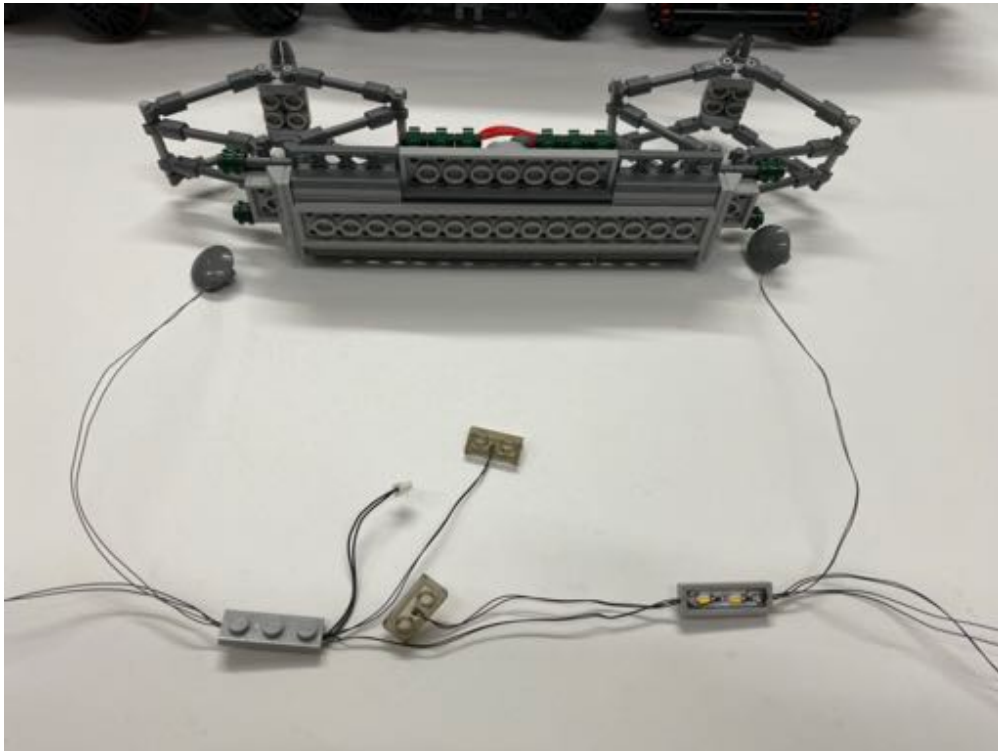

### *Installation Guide*

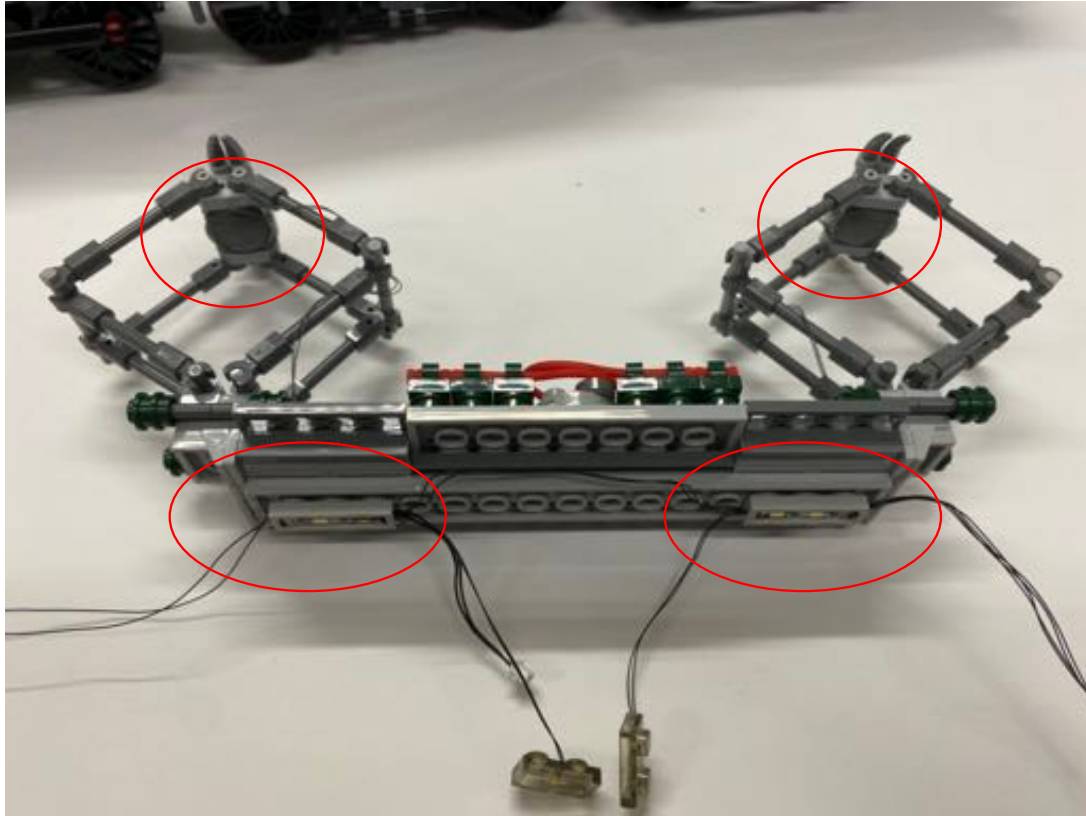

**GB** **GLOW**  
**BRICKS**

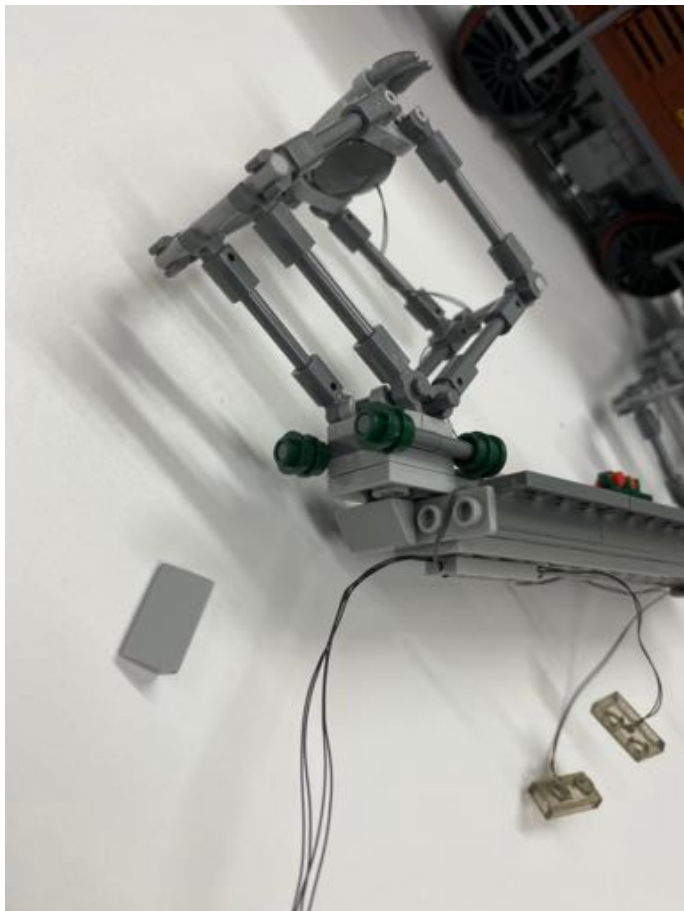

First take of the top and get these lighting parts on the position

Install the lighting plates first then pull the lighting dishes on top to the cable rack

You can hide the cable by taking off the slope on the side

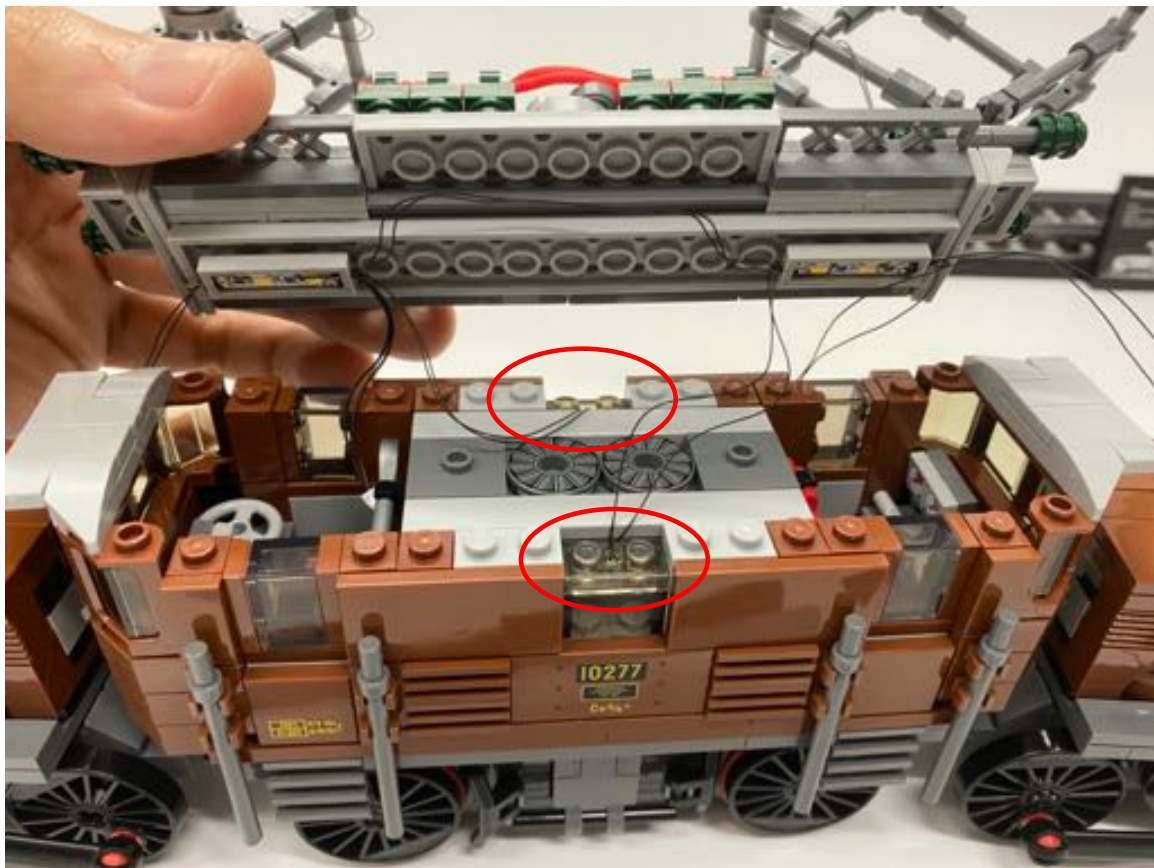

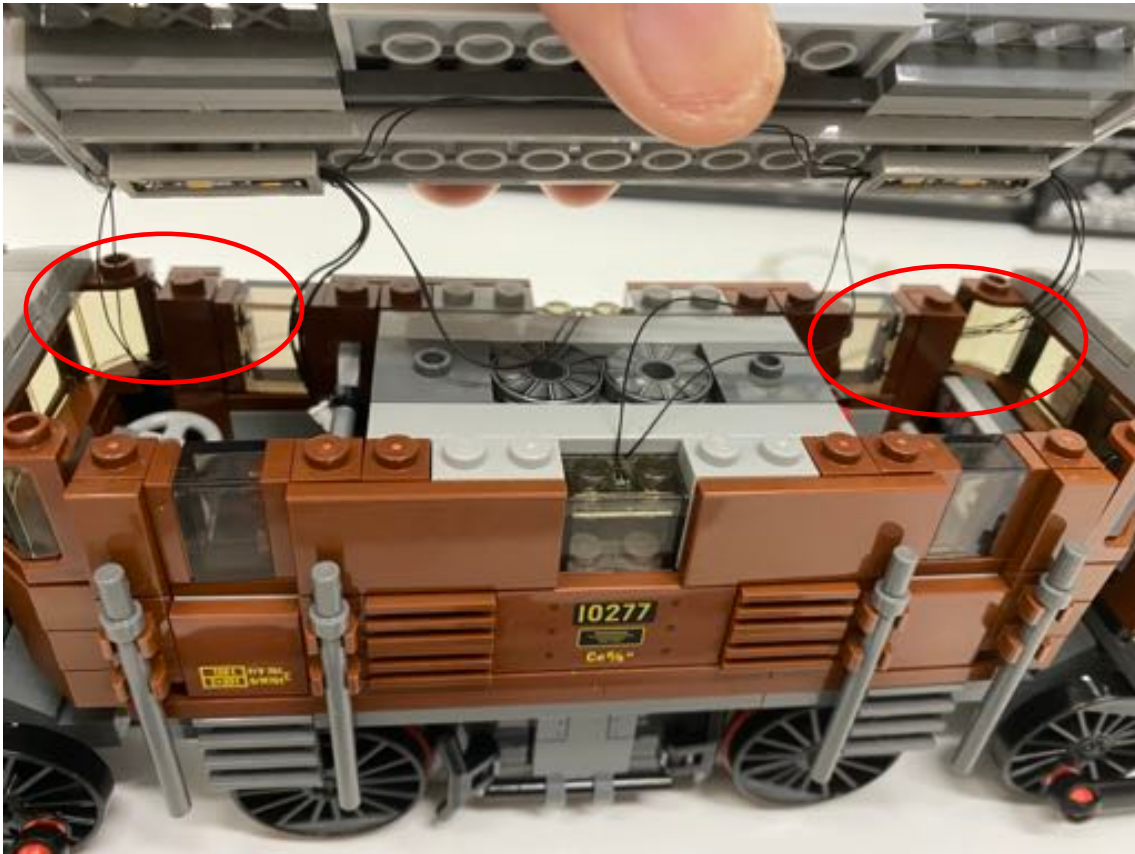

Then detach the parts as shown and we don't need the 1x2 plates  
They would be replaced by the lighting plates

Install the lighting plates as shown

For the remain lighting parts, pull them out and pass through the corner

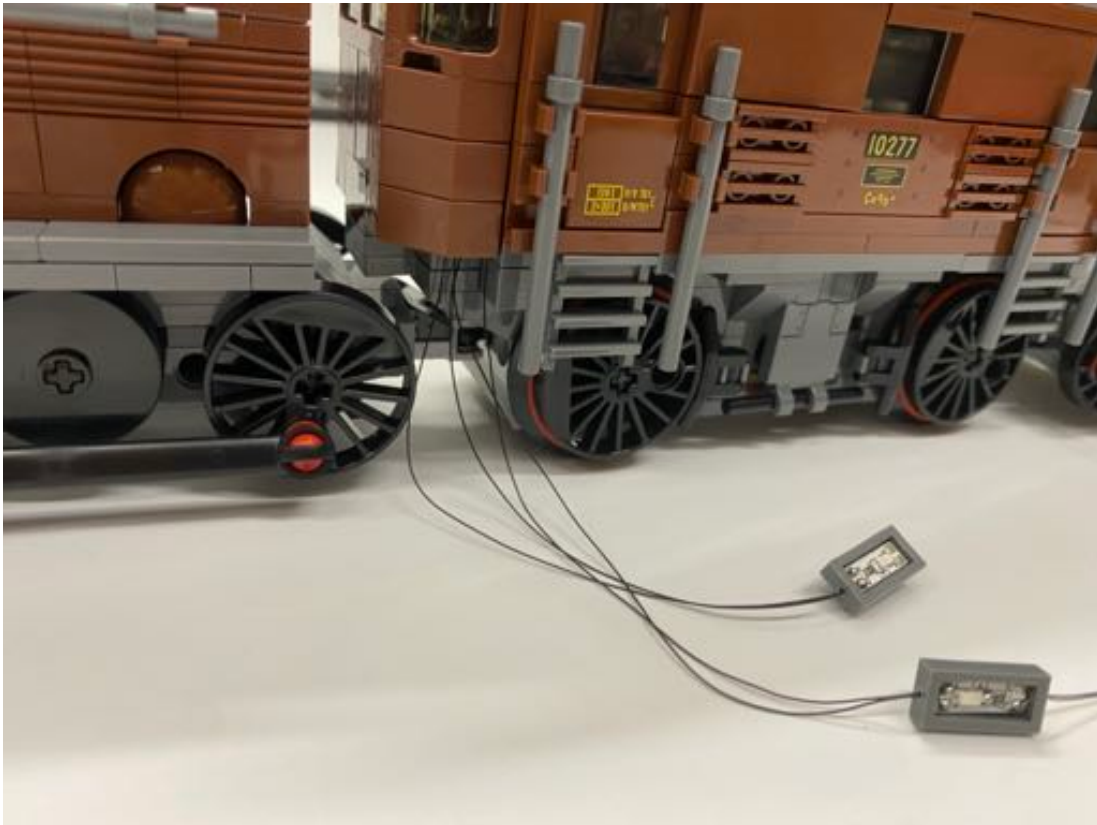

Then you can restore the detached parts

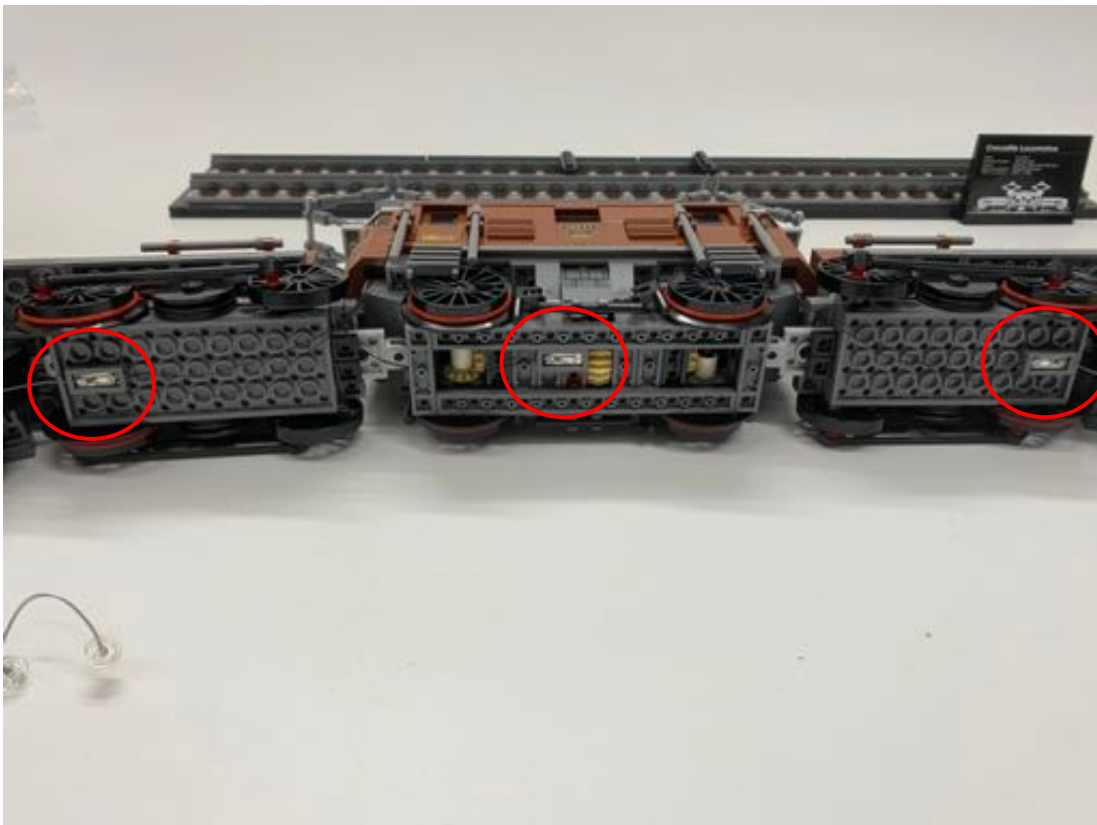

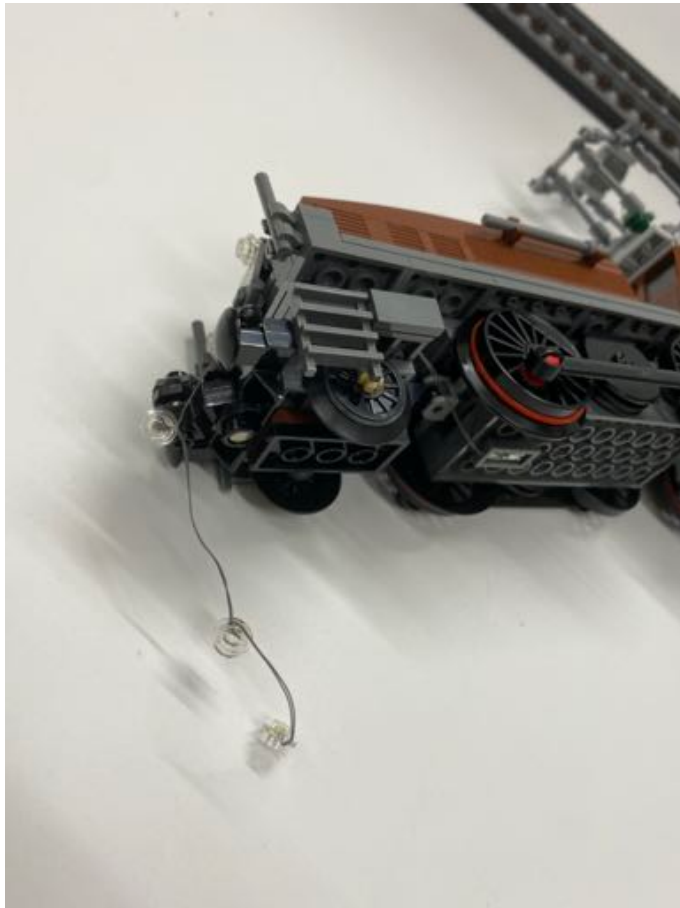

Turn around the train, the remain lights would pass to the bottom as shown

Then install the 1x2 lighting parts to the bottom

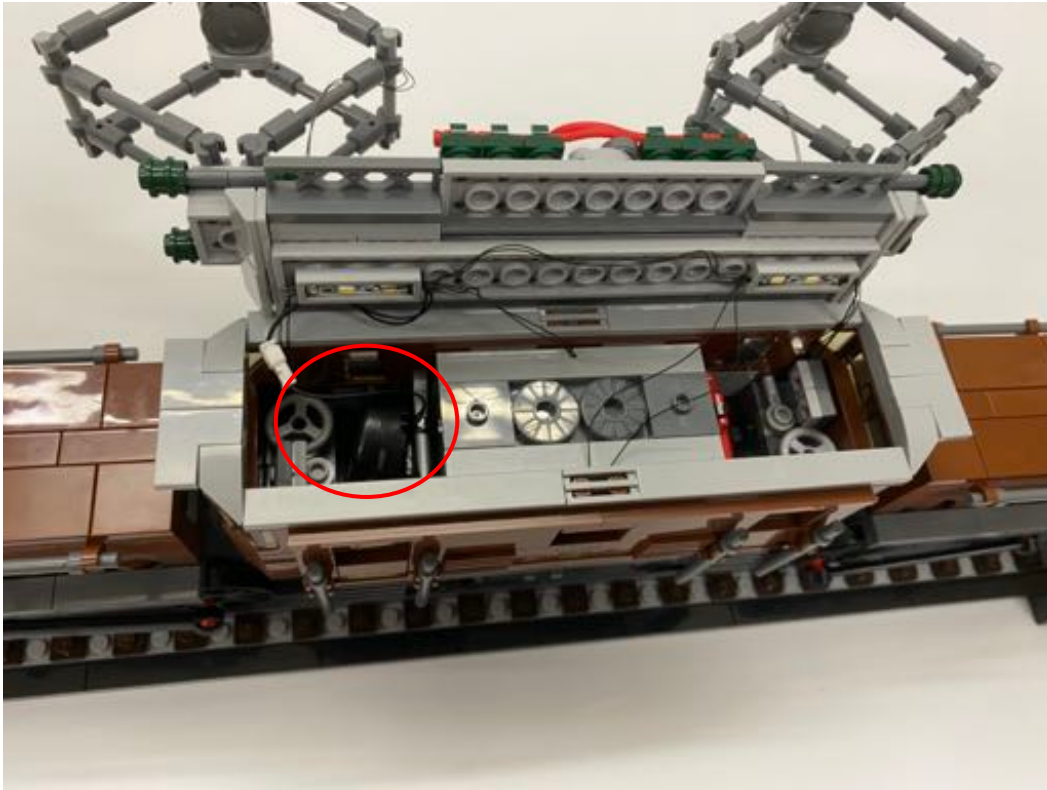

Pull the remain lights to the headlight area

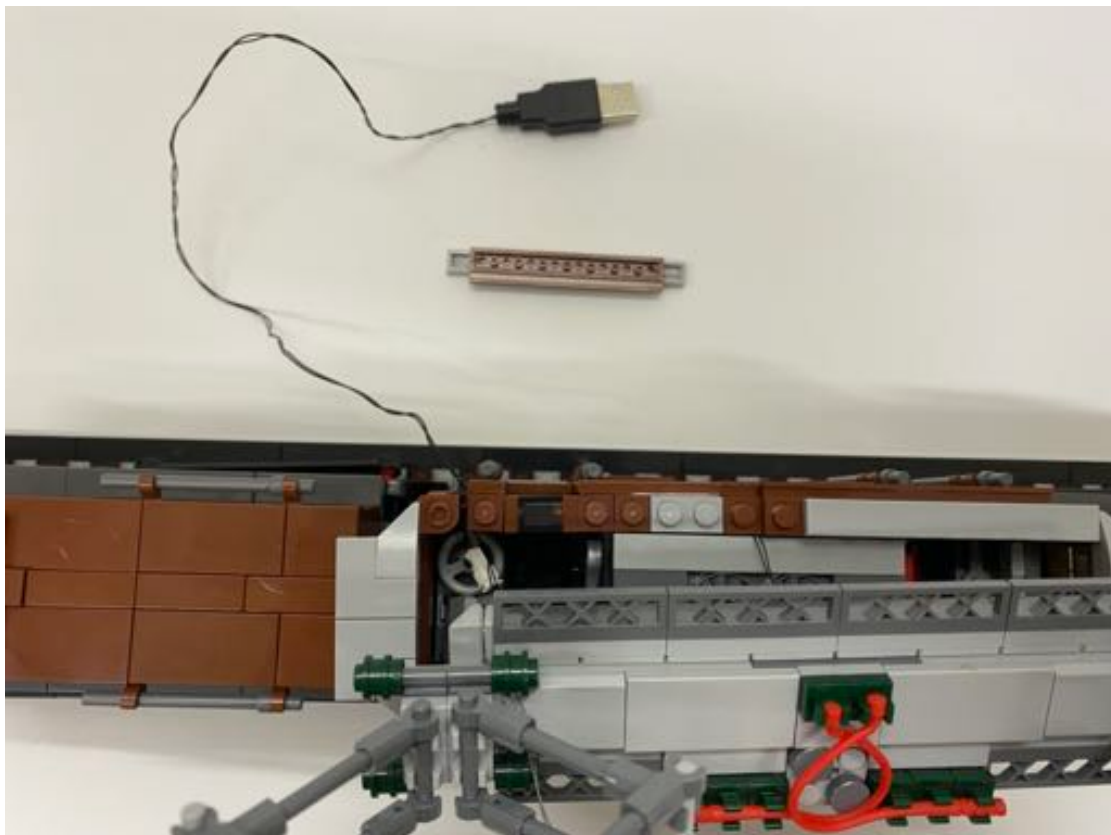

Then replace the clear round plates

To power by battery, connect with the battery case and hide it here

To power by USB, connect with the USB cable, take one tile off pass the cable through

Then restore it
