# Lego 10275

Elf Club House

Installation Guide

We start by installing lights for x'mas tree, first detach the tree as shown

The red yellow red yellow lights are for these 2 sides, remove the red and yellow round plates and replace them by lights
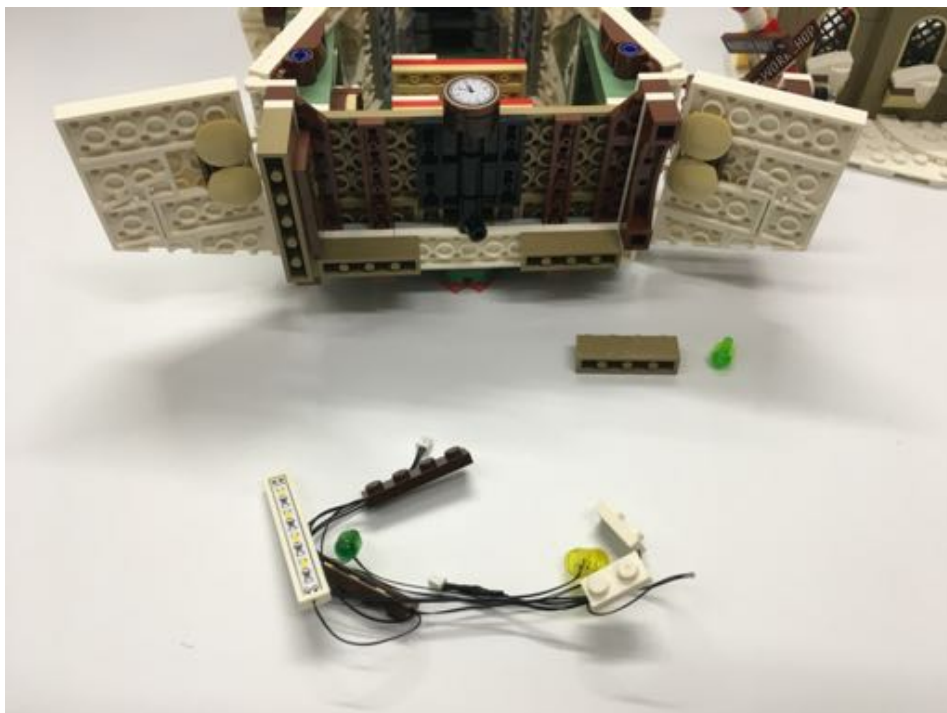

Done the same thing for the rest 2 sides

Restore the parts back to the tree, replace the black part on top by the lighting part

Now for the house, split the house as shown and prepare the lighting parts shown

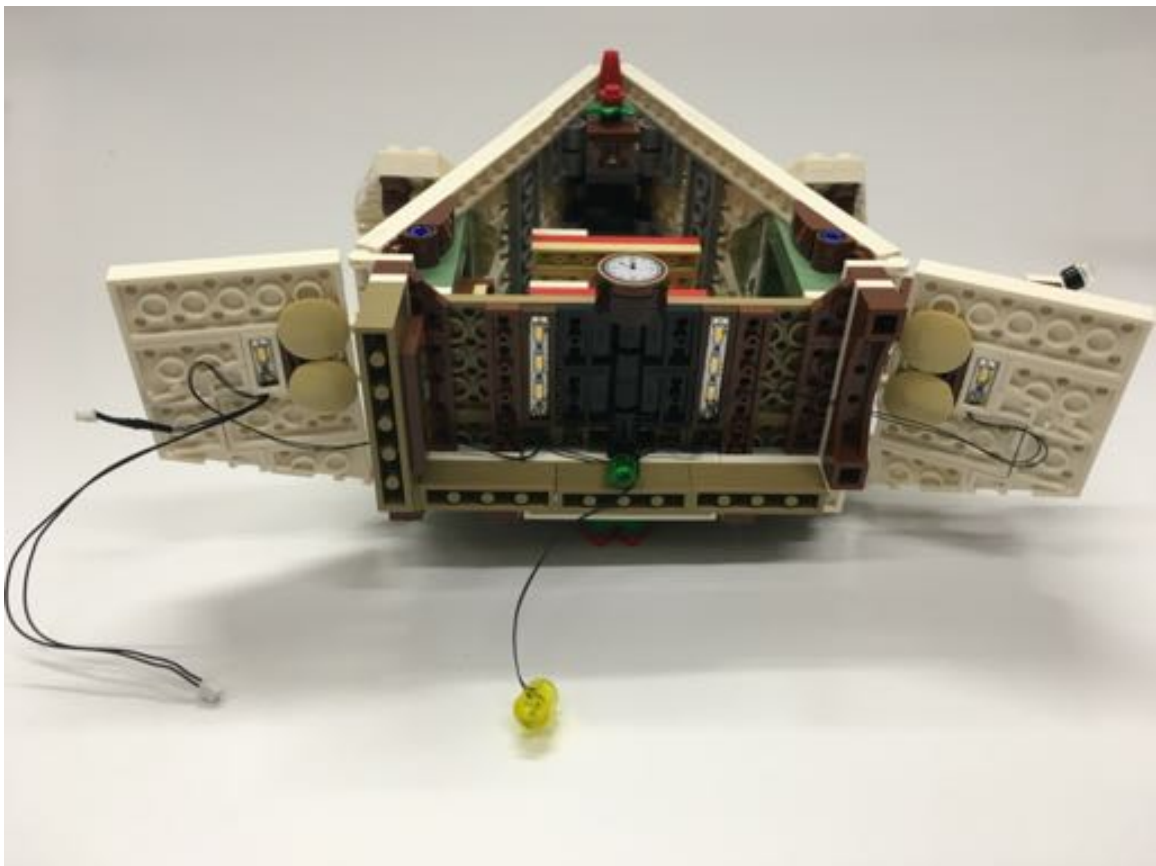

Remove the 1x4 brick and green pin

Remove the bricks as shown and install the lighting parts

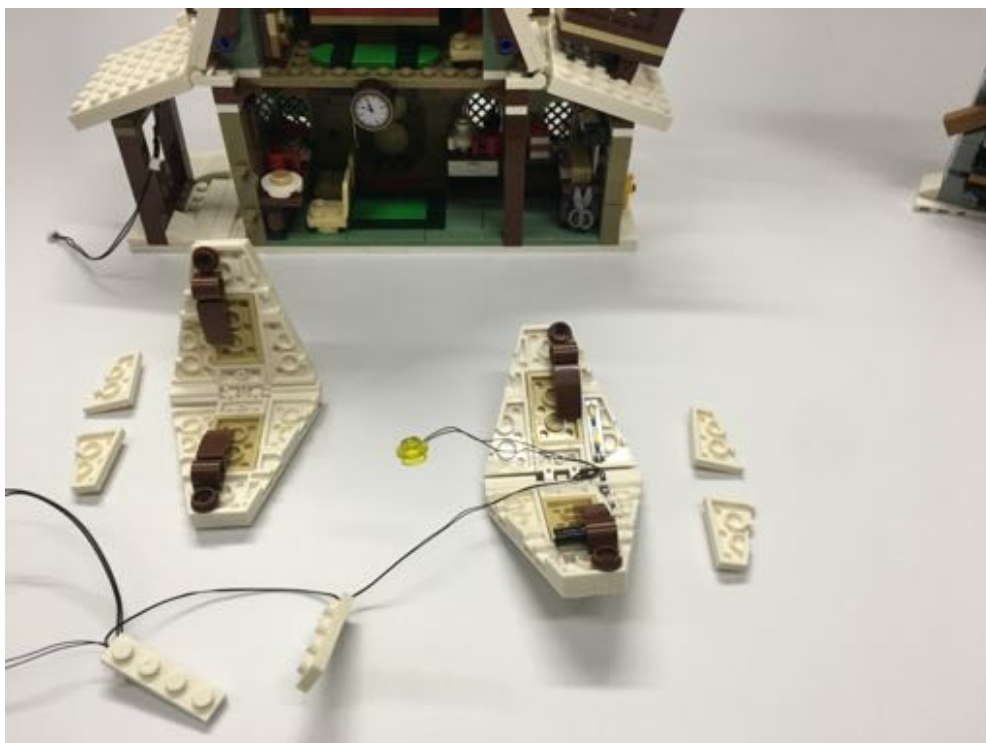

Then restore the bricks removed

To install the lighting yellow round brick, remove the parts shown, put the wire through the gap and replace the yellow brick, then restore the parts and combine the house

Then take the shown parts and remove the triangle plates on outer side

Replace the plates by the lighting parts, remember the side with yellow round plate locate on right side

Put the remain lighting parts inside the house through the gap as shown

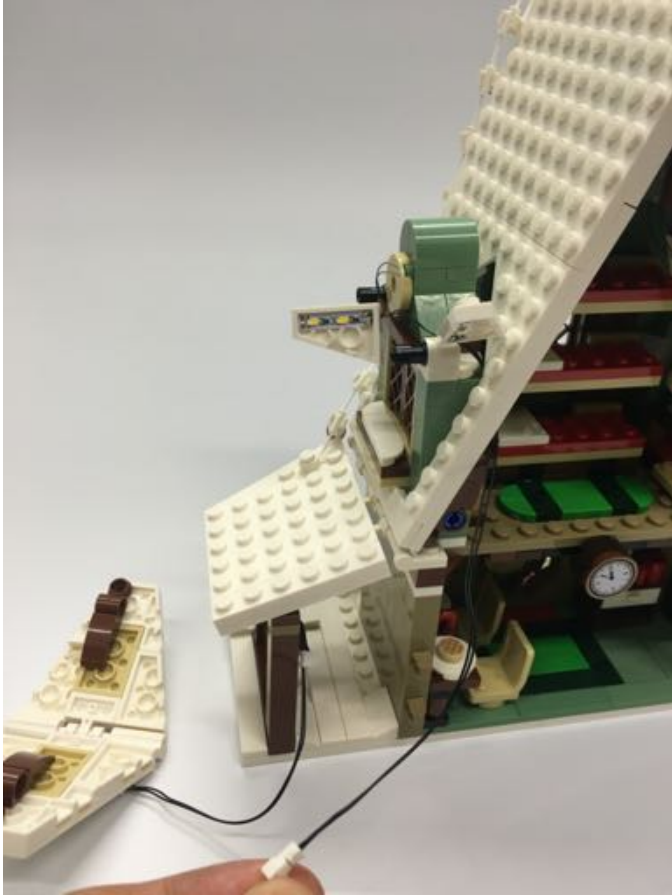

Then restore this side

Install the lighting yellow round plate inside the lamp

Then install the lighting 1x4 plates as shown

Pull the lighting triangle plates outside, but leave the wire with connector inside the house

Then install lighting plates

For the connector, pull it to downstairs and connect with the lighting parts
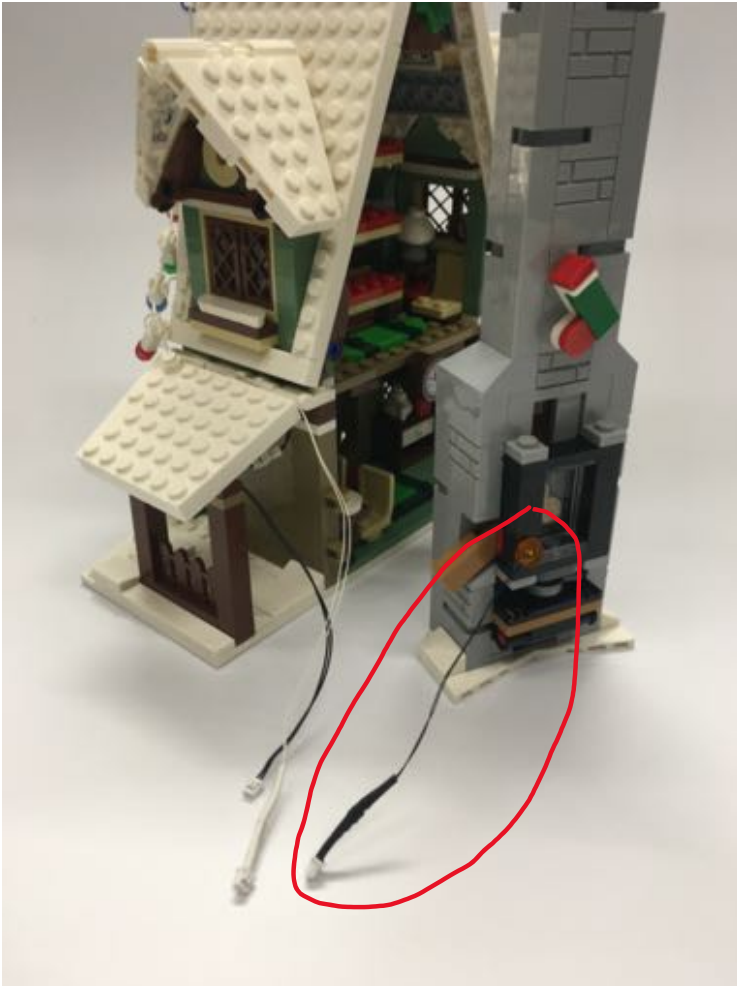

Now for the string, take all the pins away and replace by the lighting pins

After restoring the string, pull the connector to the back

Install the orange lighting round plate to the fireplace, and gather all the connectors

Connect with the USB cable then it's done~
