Lego 42125
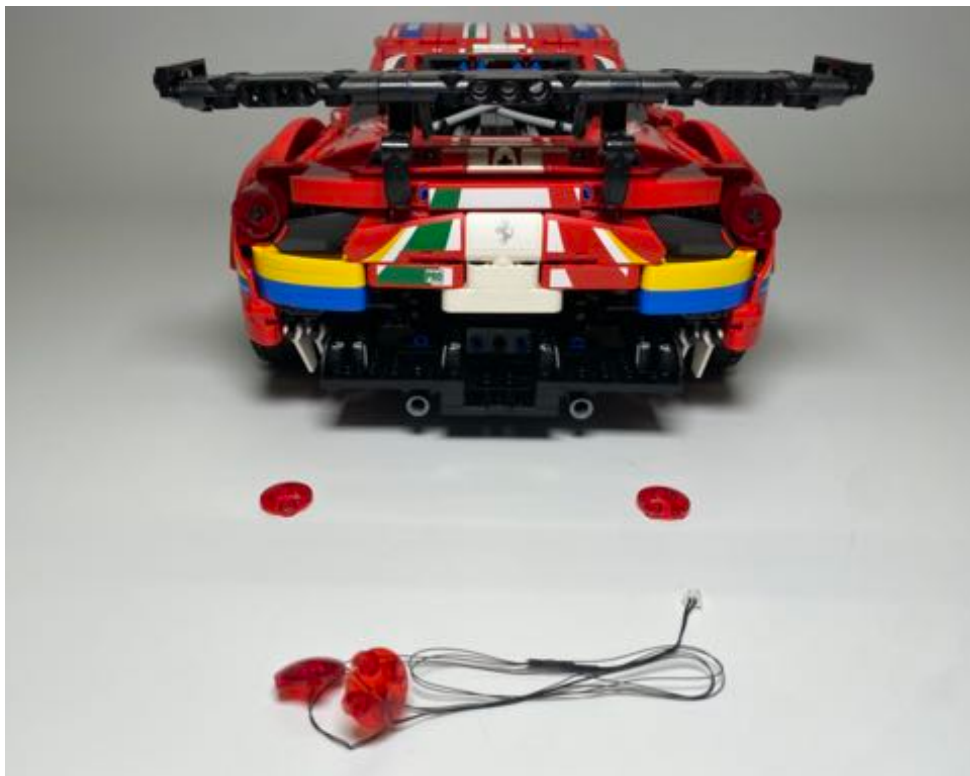

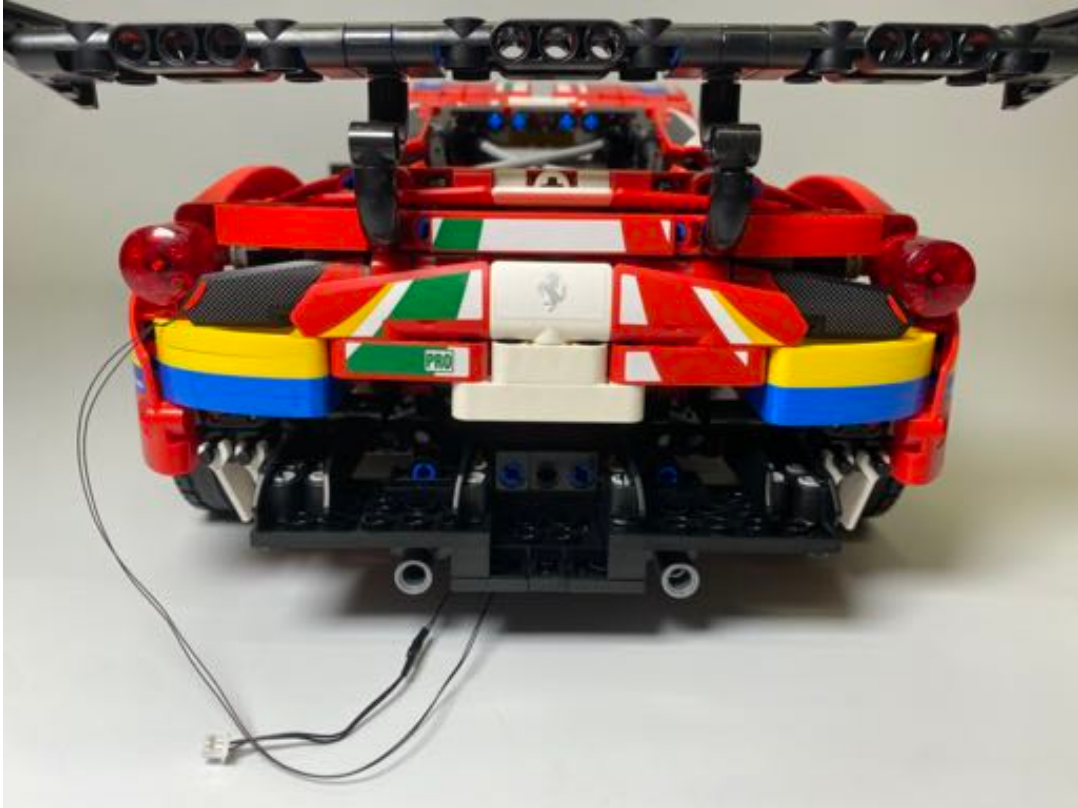

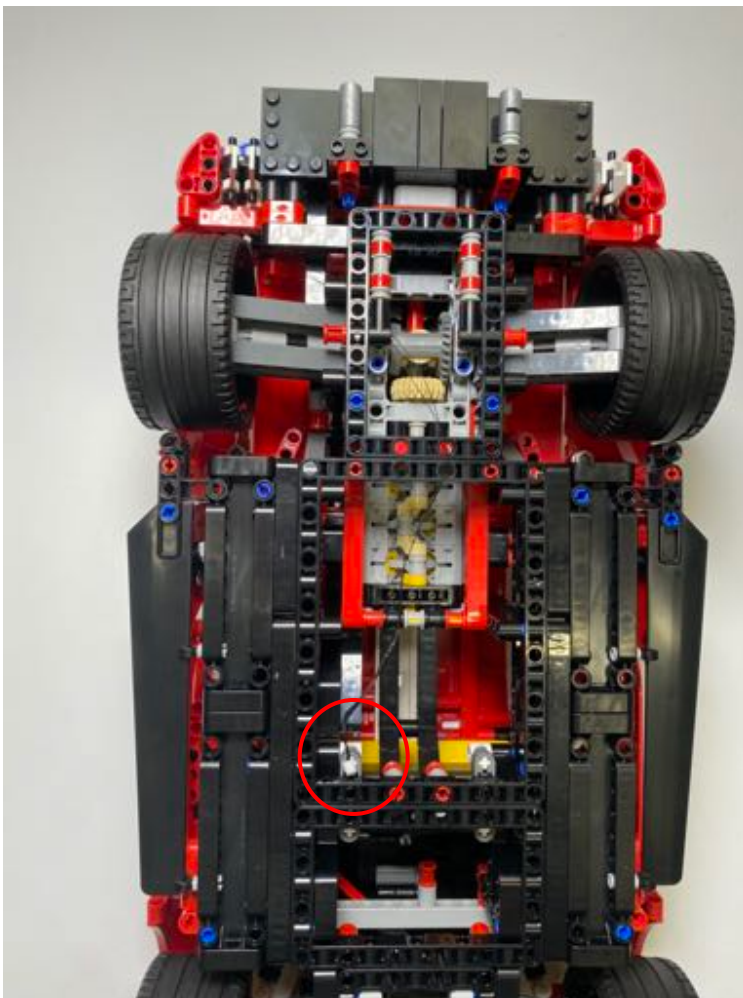

Ferrari 488 GTE

Installation Guide

Start from the rear lights, remove the red 2x2 round plates
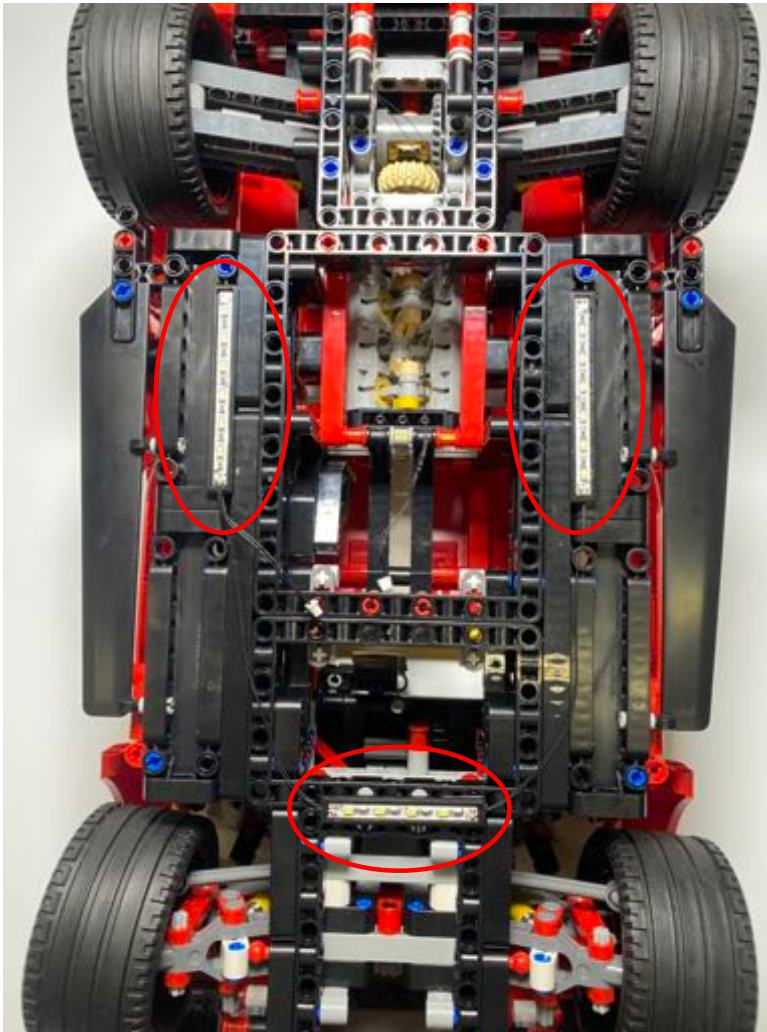

Install the lights by replacing the round plates removed and hide the wires in between behind the logo plates

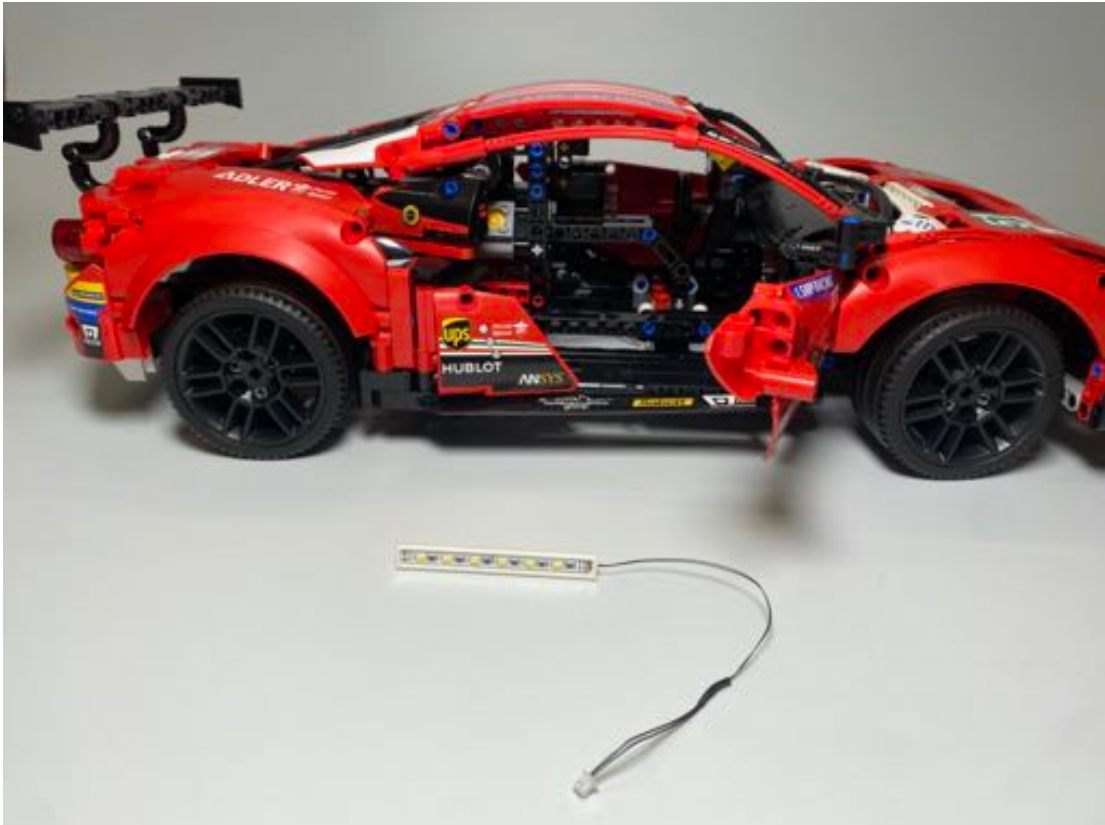

Then move the connector underneath the car and move it to the location shown
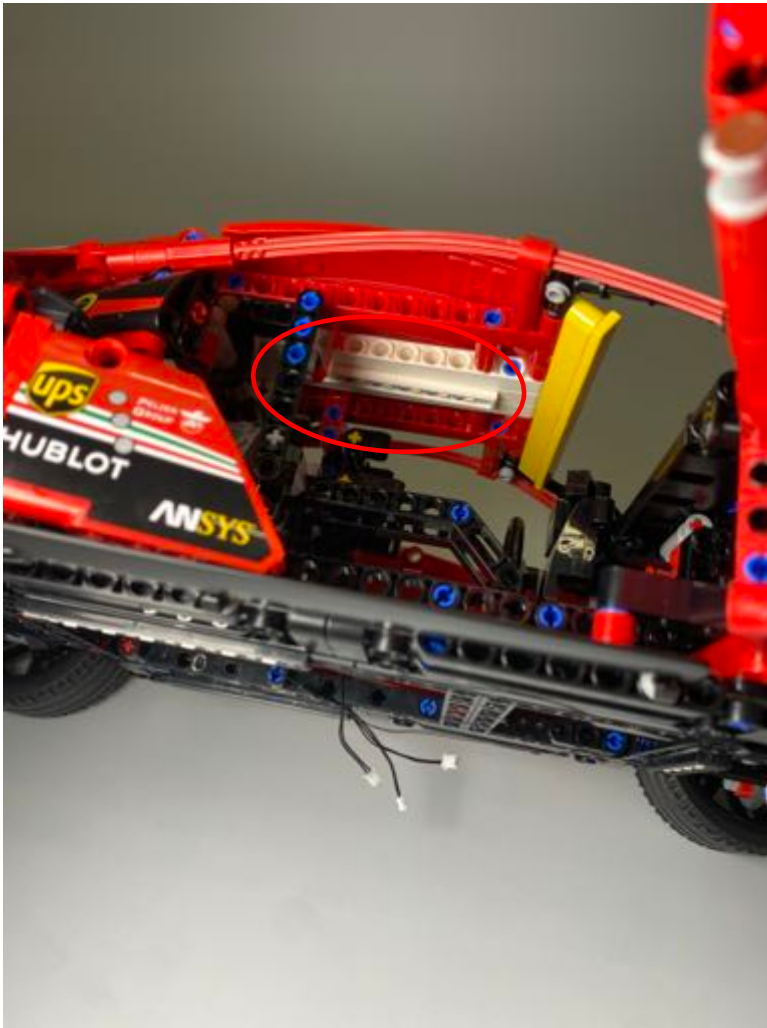

Install the black tile lighting parts to the shown spots

Now take the white lighting tile ready

Install at the shown spot, then pull the connector through to the bottom

Now install the following lights to the front light

Open the cover and take the front lights out
Detach the cover and install the lights as shown

Now put the lights back

Gather all 4 connectors to the middle area

To power by battery, connect the plugs to the battery box
Then stable it to the shown spot by the studs stick on the box

Or you can power by USB cable
