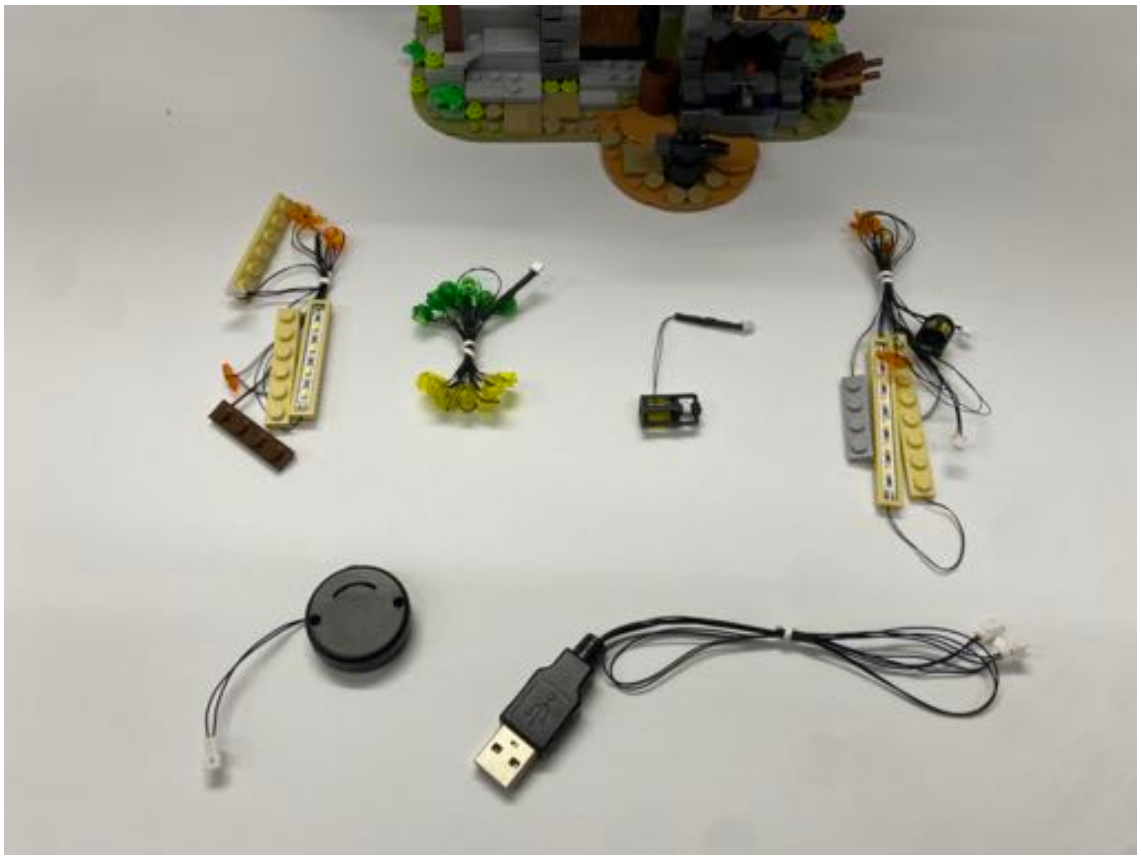
Lego 21325

Medieval Blacksmith

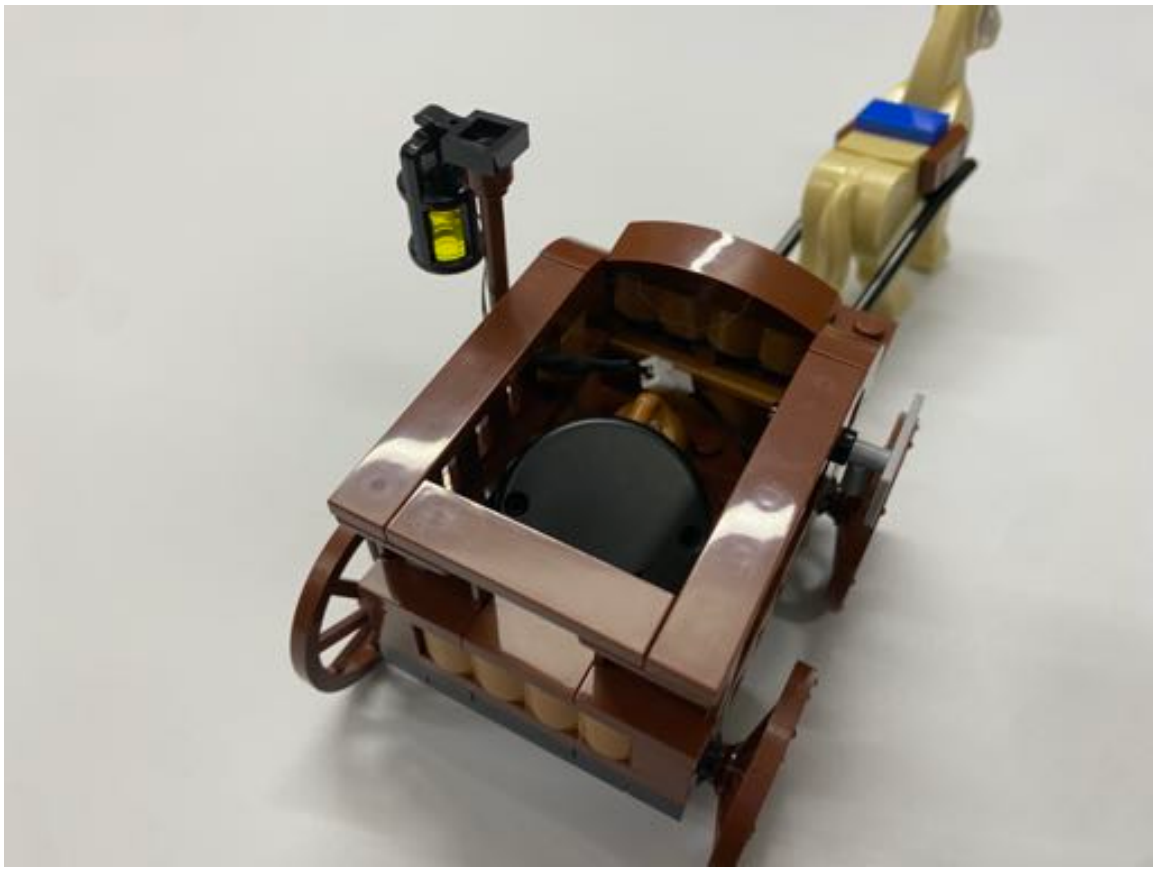
Installation Guide

GLOW BRICKS

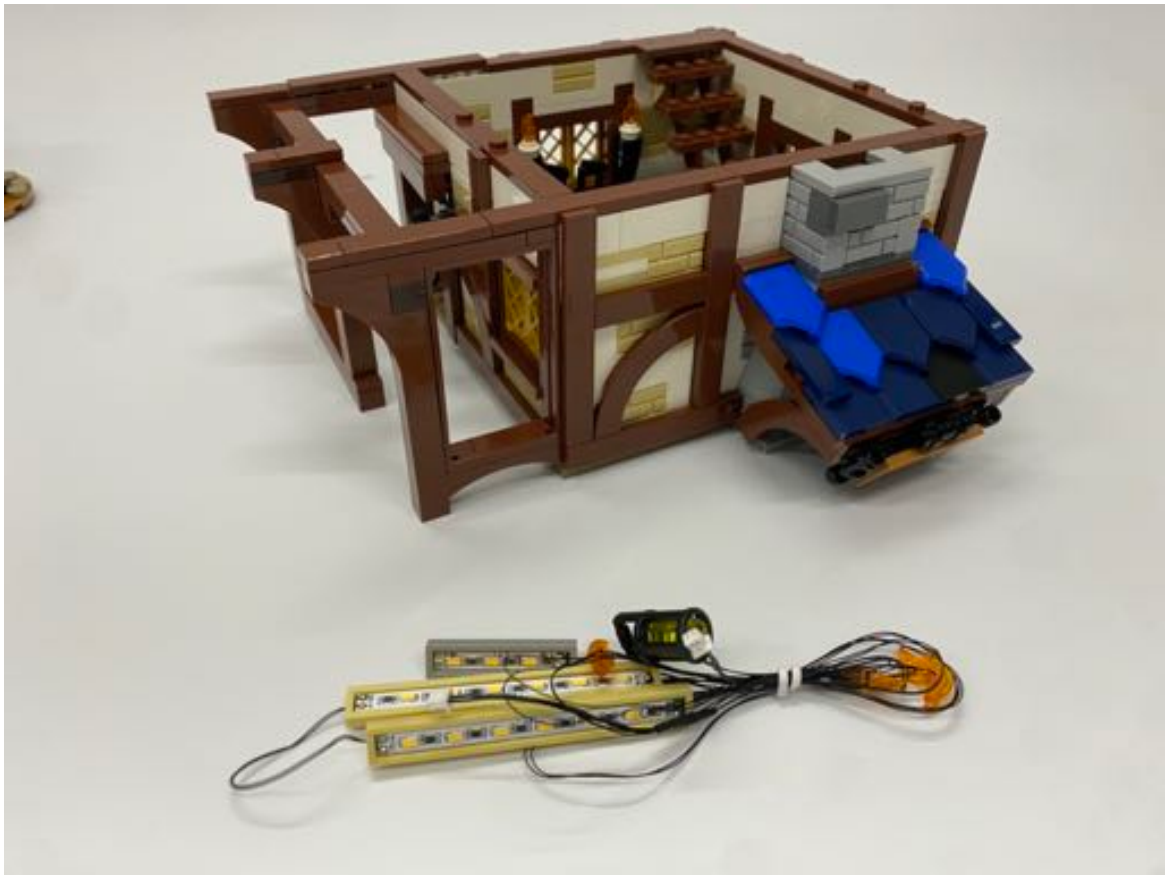


Switch the lamp by the one with light

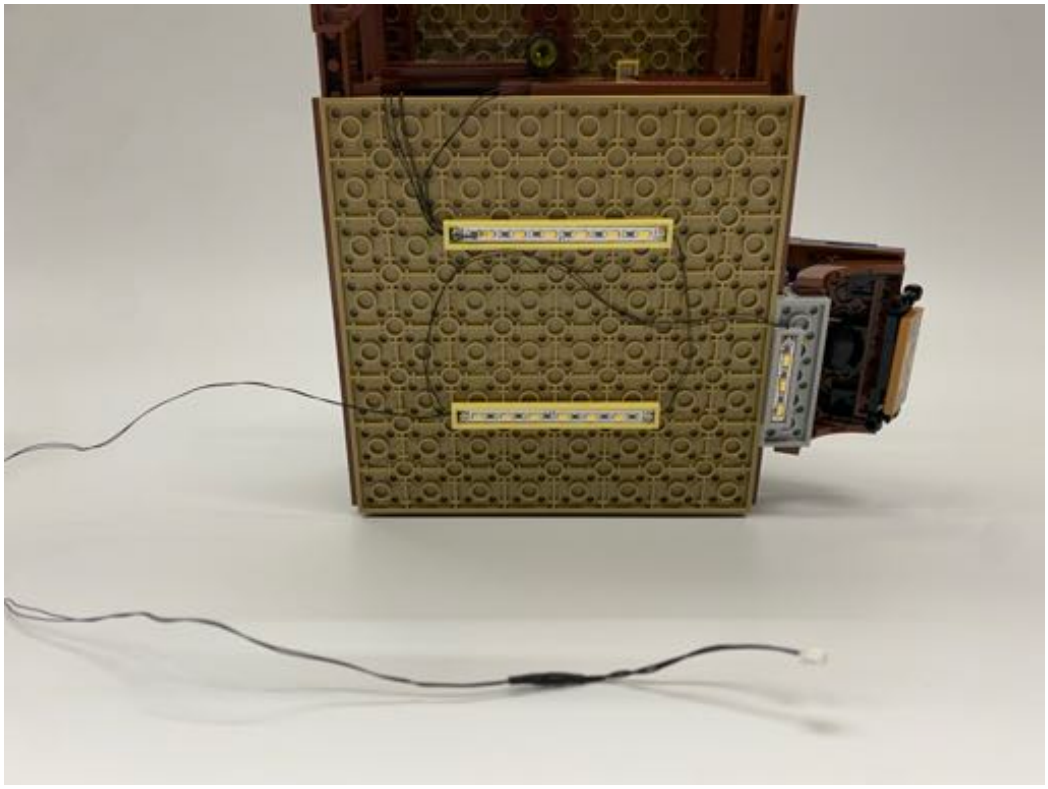
It can be powered by the battery case, the case be be hidden as shown



Split the house, take this lighting part for this layer

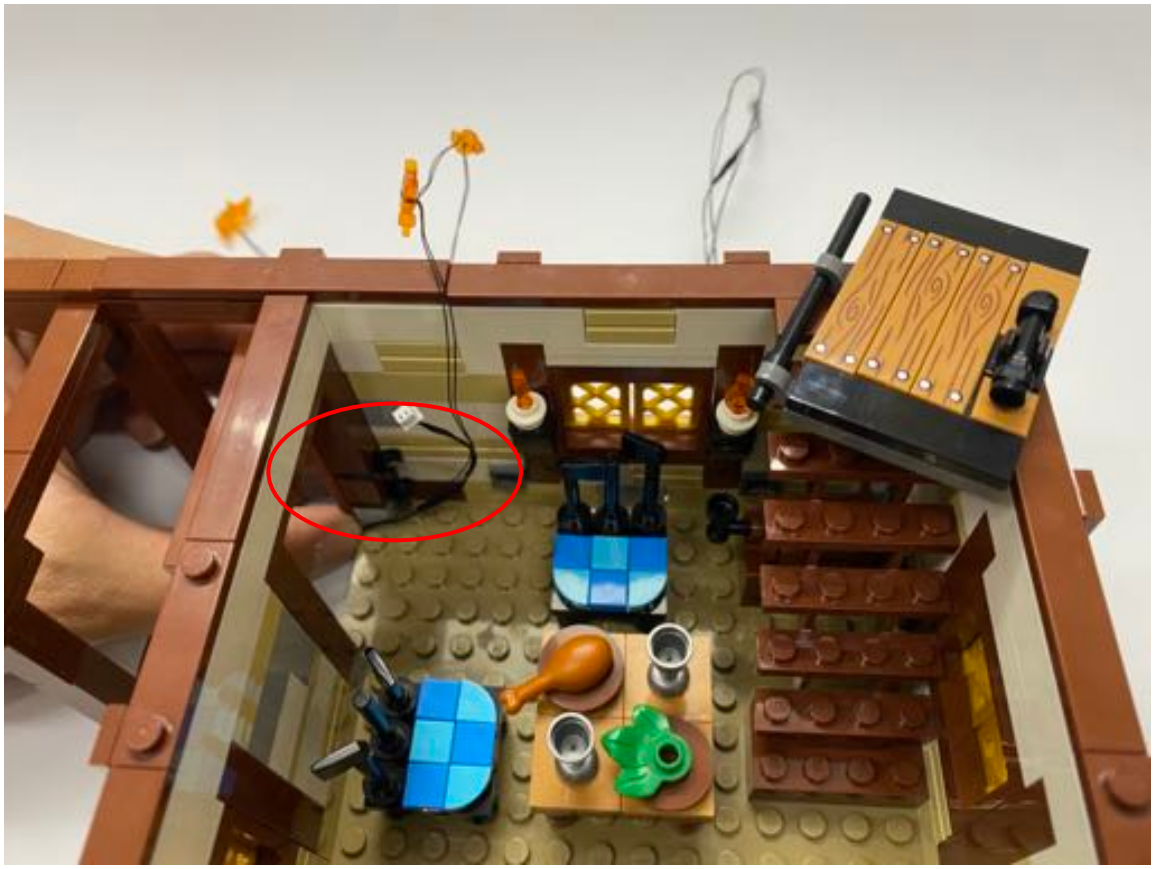


Install the lighting plates as shown



Replace the lamp, and hide the wire under the tile shown

Take the door away, move the remain lights inside the house and stamp the wires behind the door joint



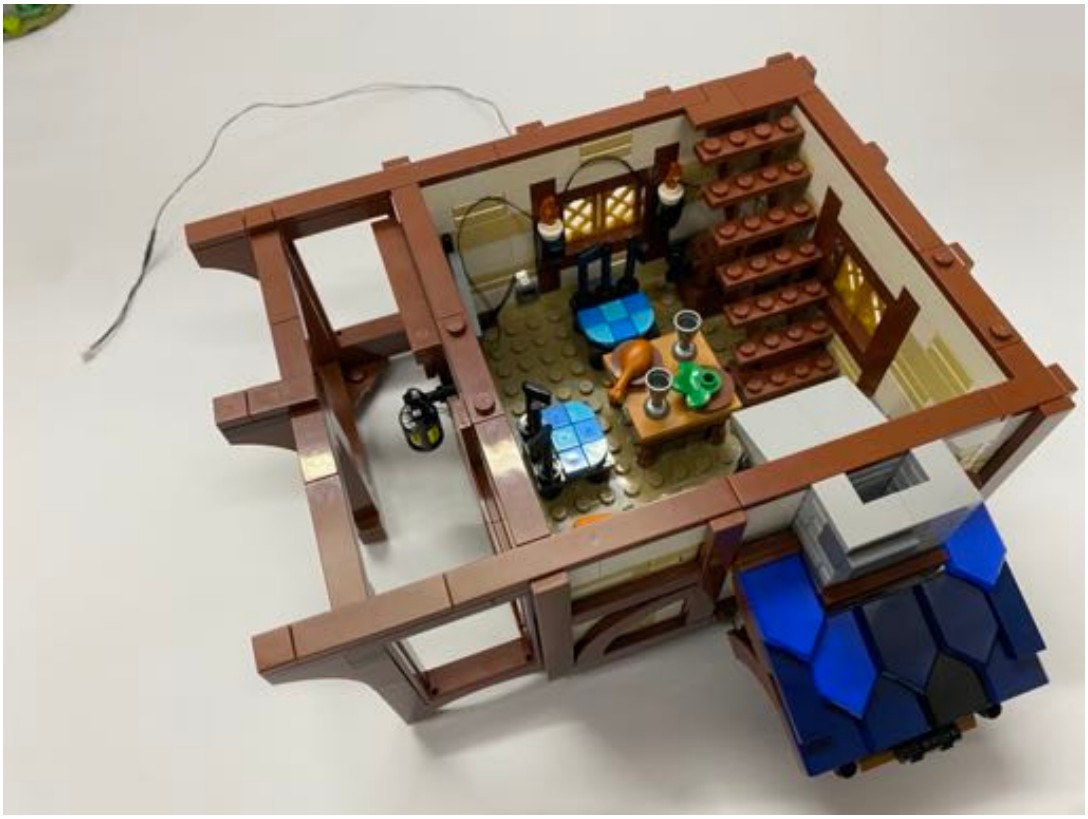
Then restore the door, the wires would be stamped behind the door

Remove the following parts

Then install the flames

Then install the last flame into the fireplace

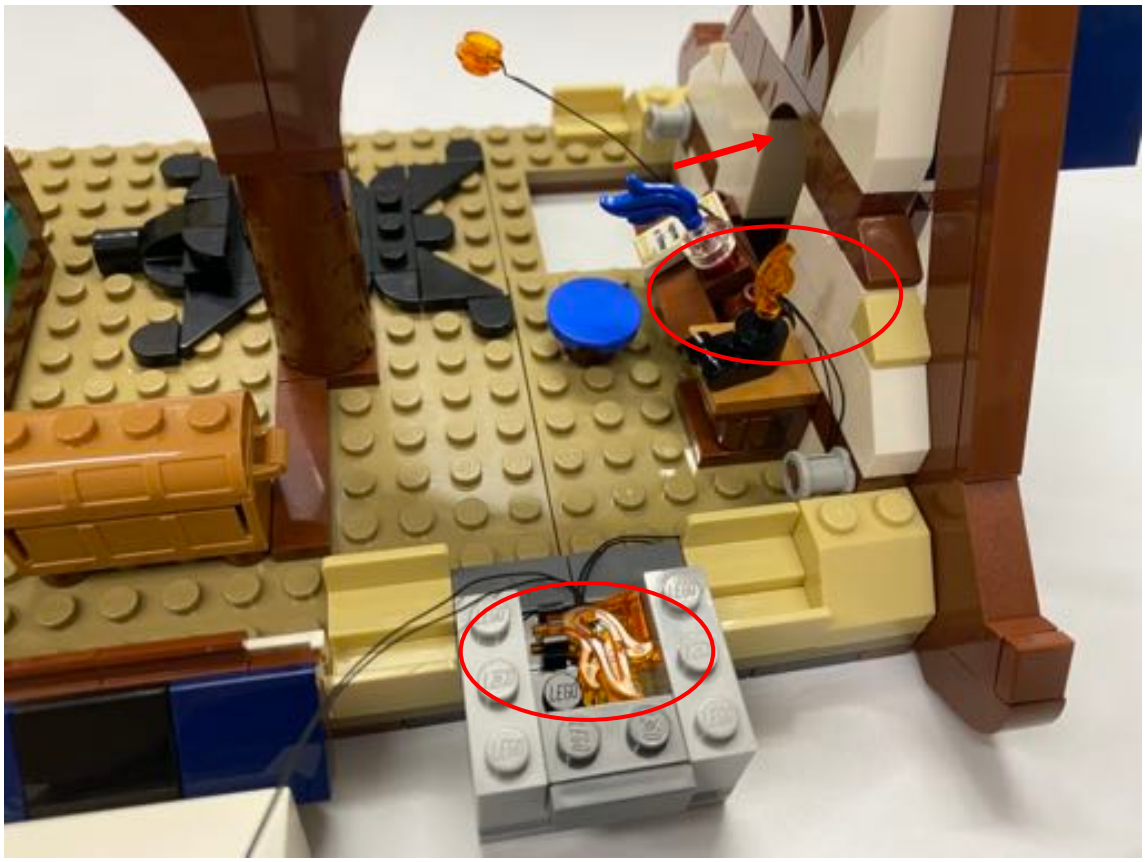
Now you can restore all the removed parts



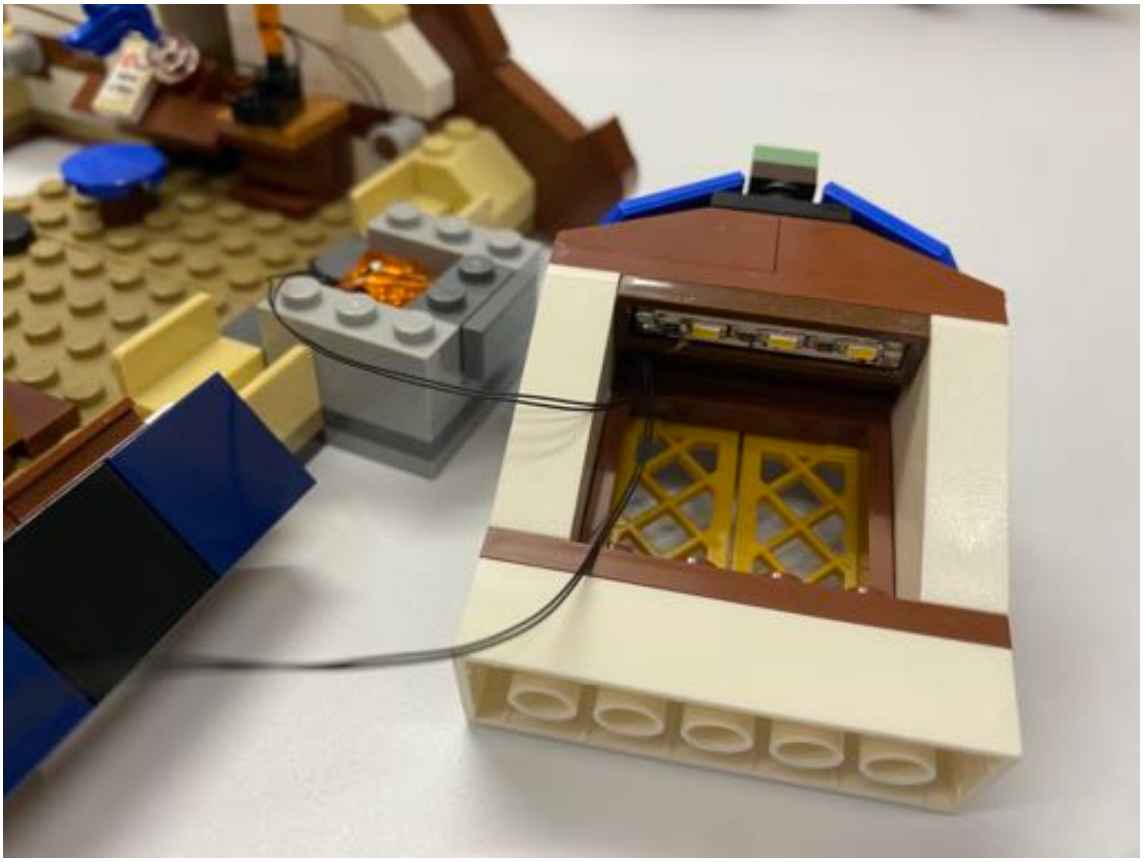
Now take this lighting parts for the top layer

Remove the parts shown before installing the lights

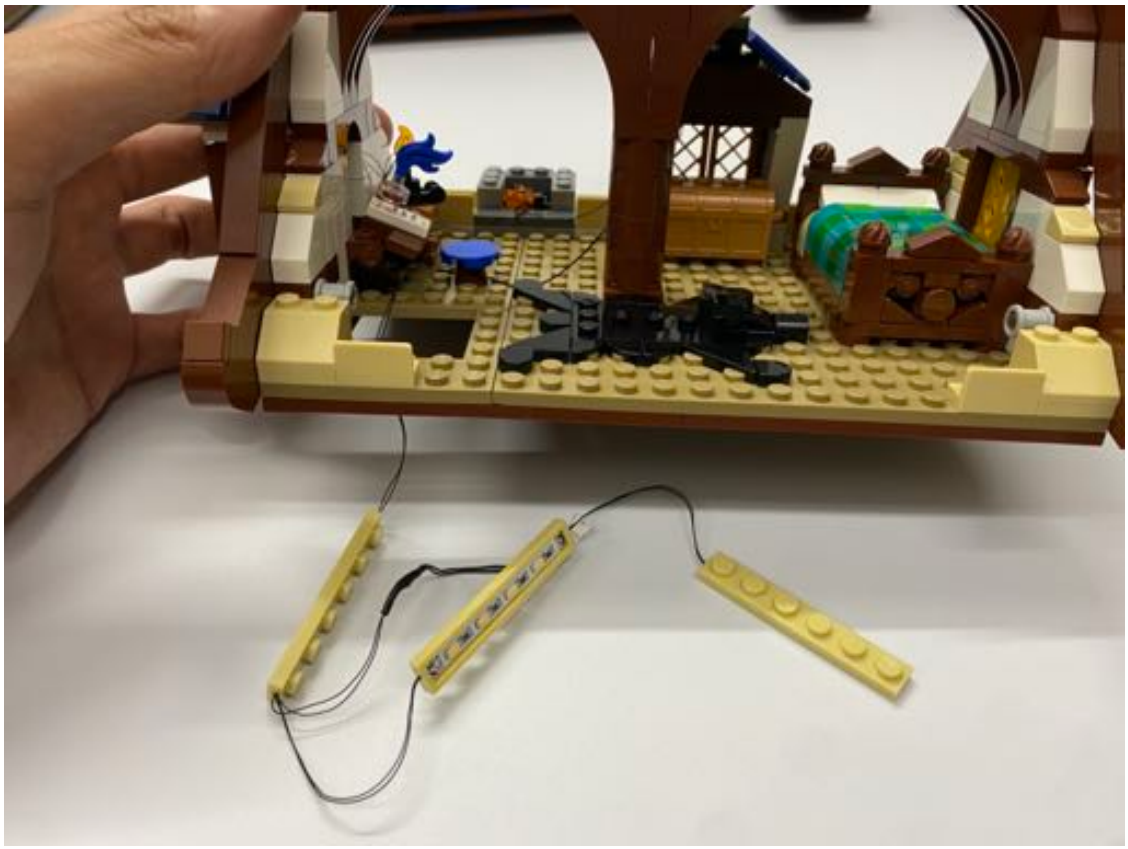
Install the flames as shown, and install the round plate followed by the arrow



Install the lighting 1x4 plates

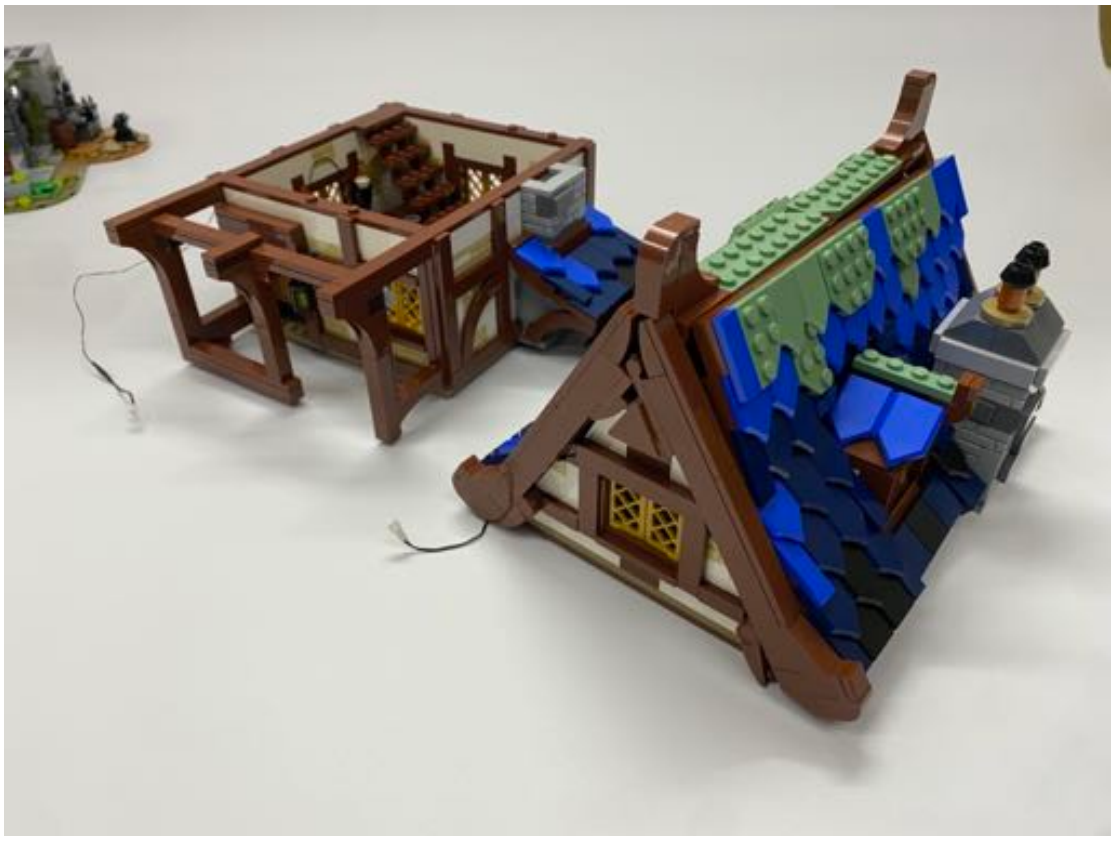


Move the remain lighting plates to the bottom

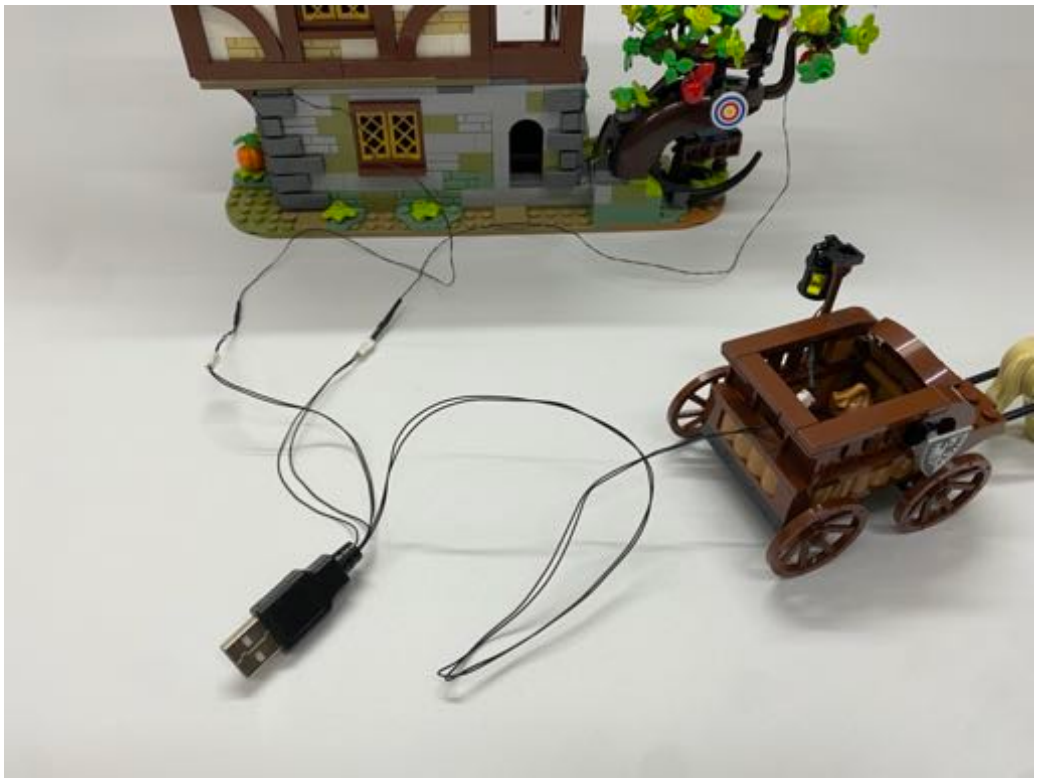


Then install them as shown

Now restore the top level and connect with the lower one



Connect the plugs then combine the house

Take the tree away and install the round plates on it


Connect the USB cable then that’s it
