

Lego 10295

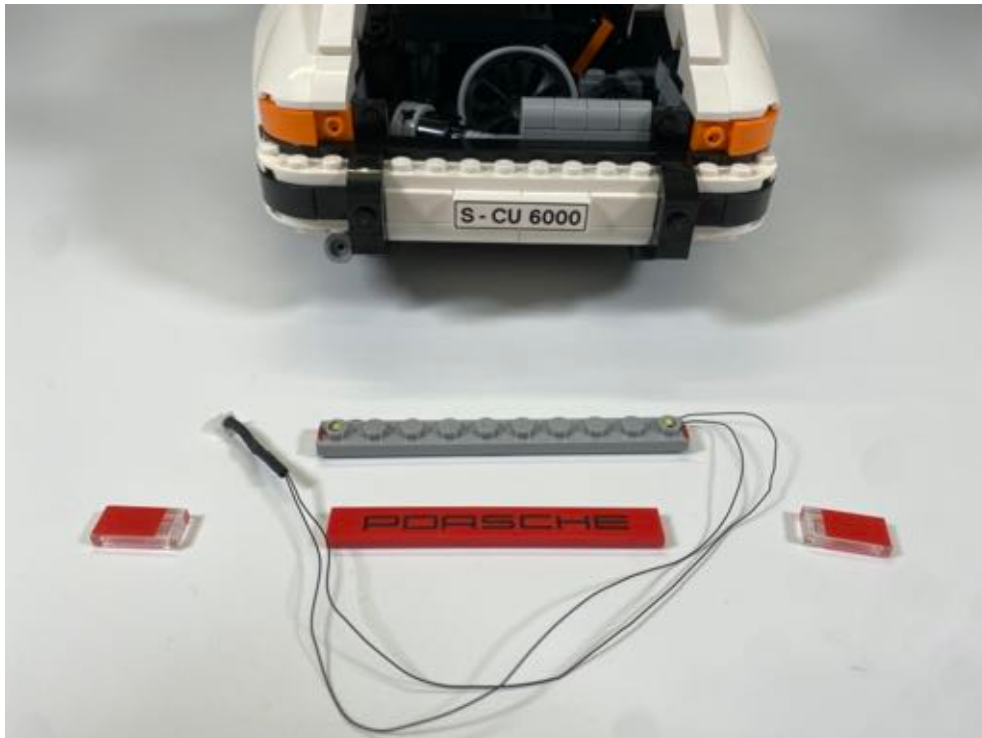

Porsche 911

Installation Guide

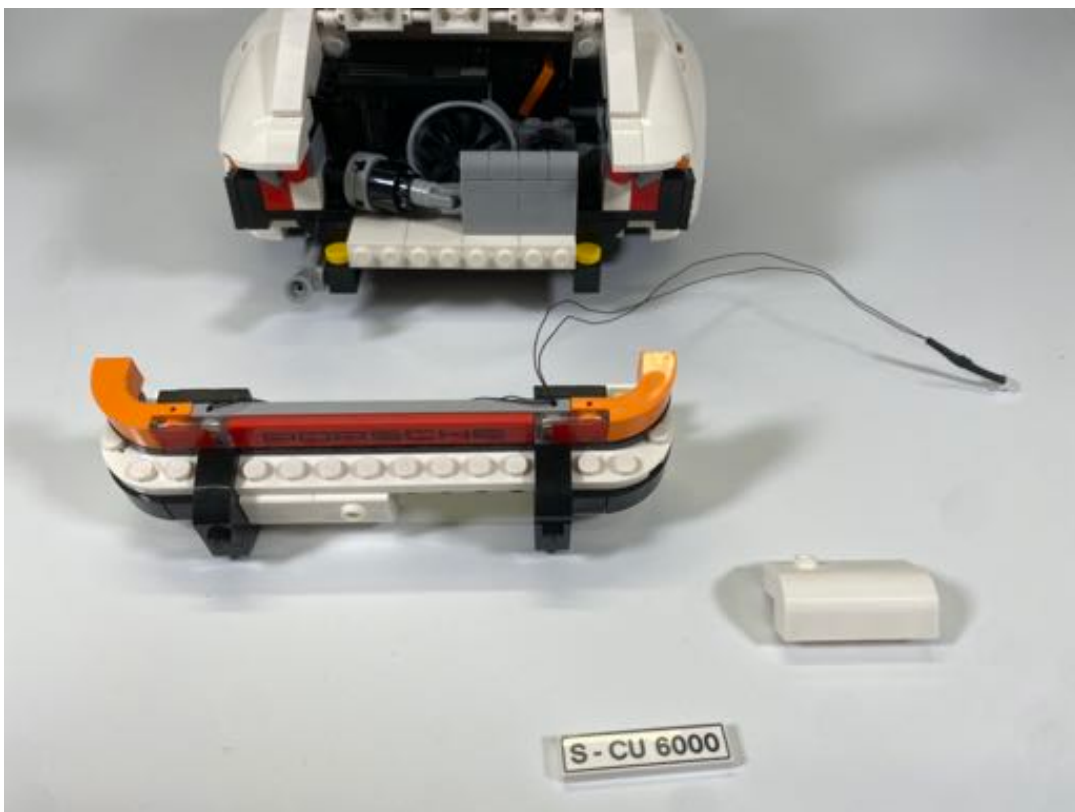

Start from the rear lights, remove the following plates

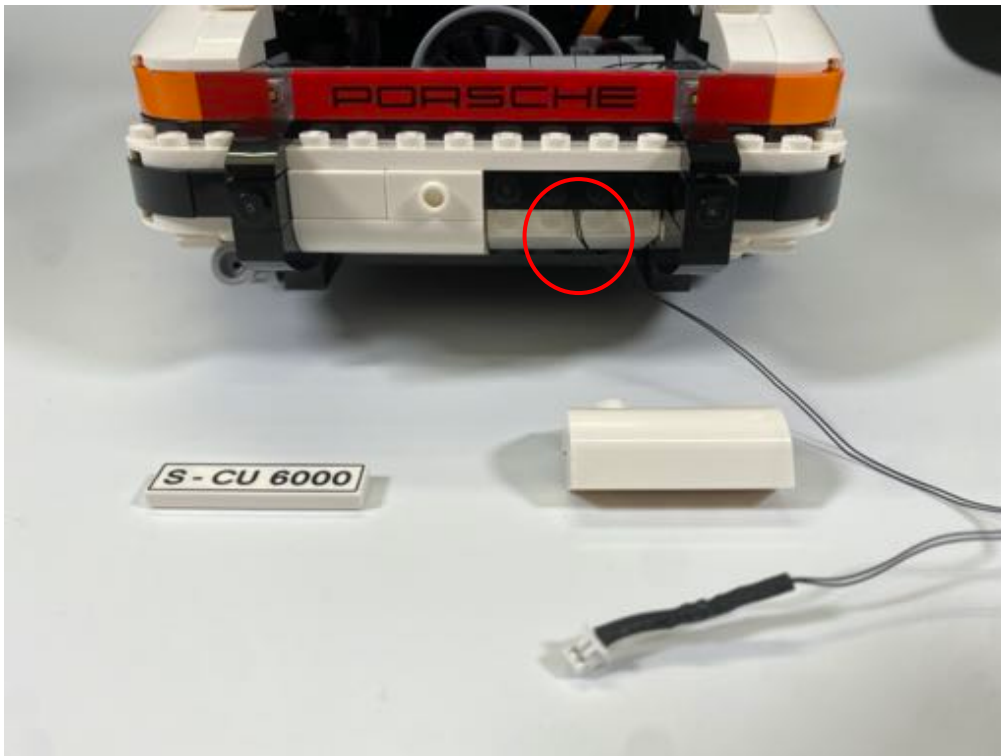

Replace the 1x8 grey plate by the lighting plate

Take the rear bumper away combine with the light, separate the white parts from it

Restore the bumper, before that place the wire in between the studs

Then restore the previous parts

For the inferior light, remove the seat and the side away first

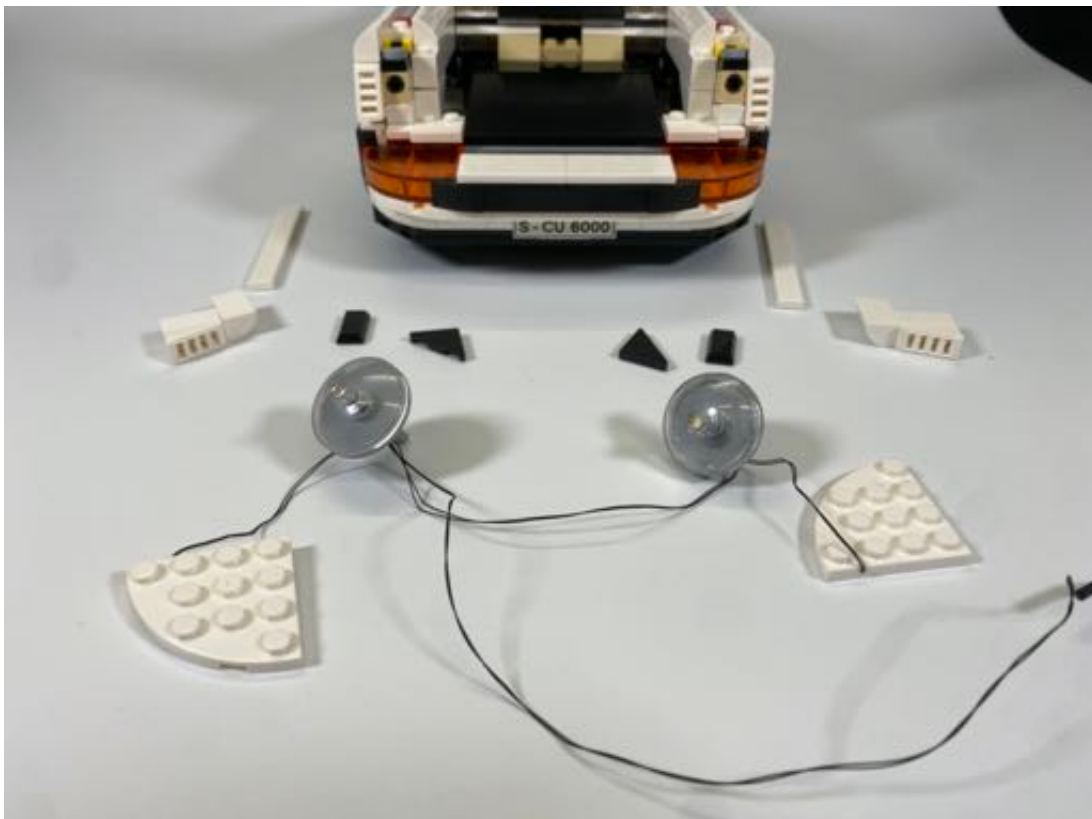

Install the light then place the wire as shown

Restore the removed parts afterward

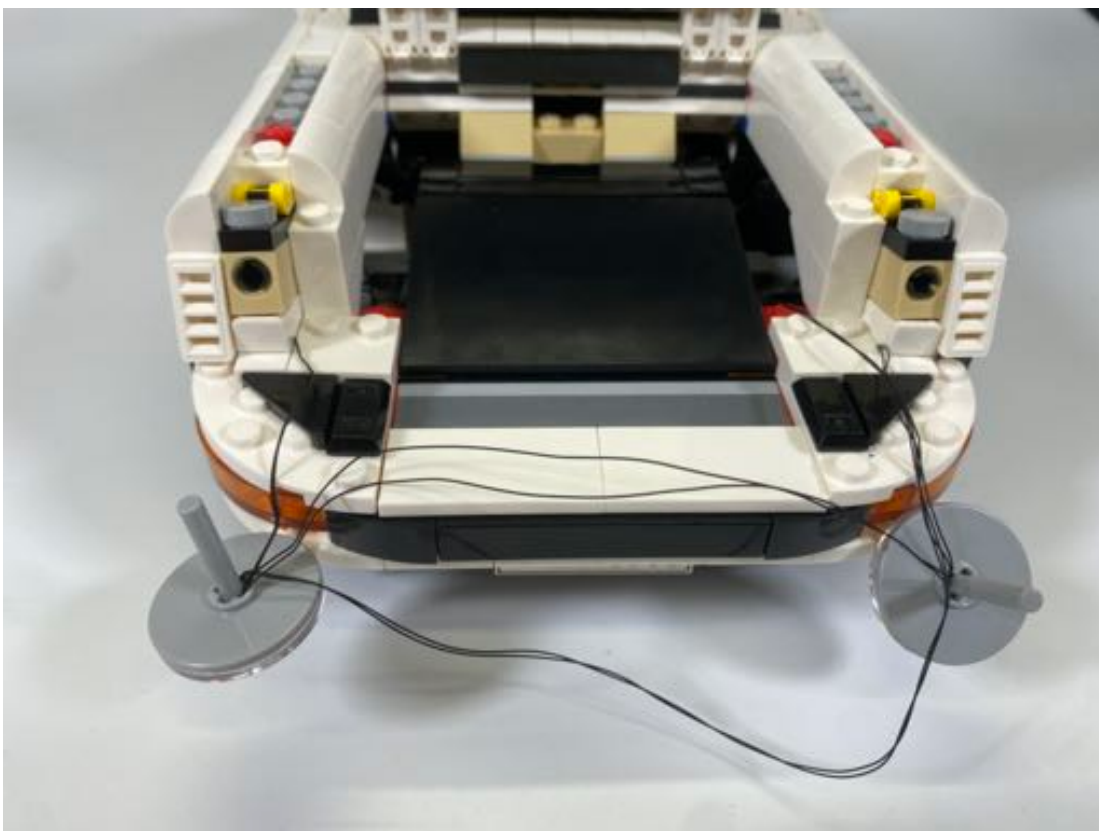

For the front, remove both of the lights and the white plates under, keep the black plates

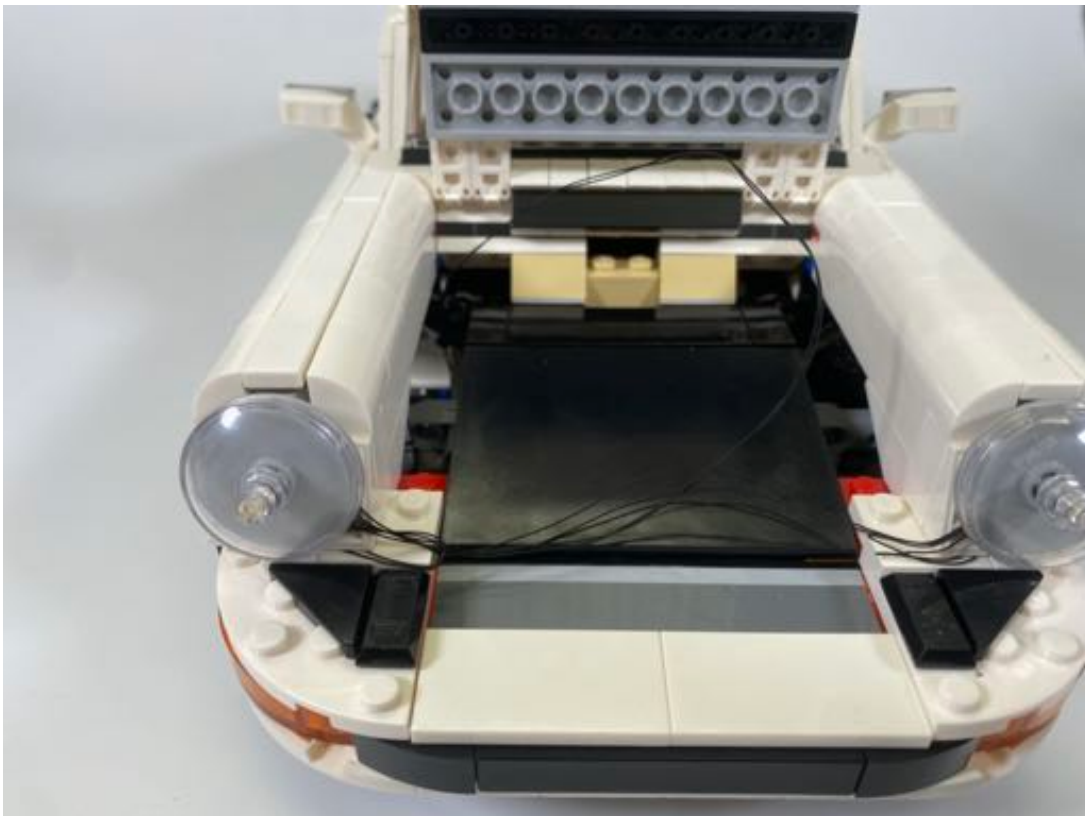

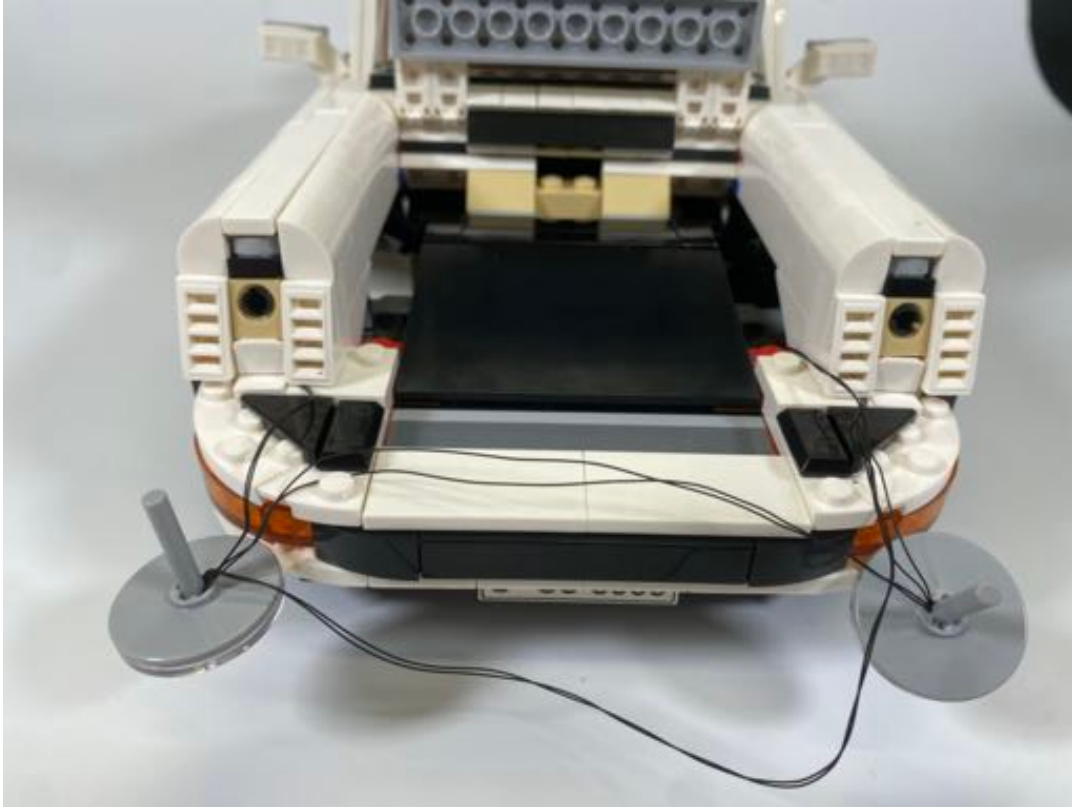

Combine the black plates on the white lighting plates

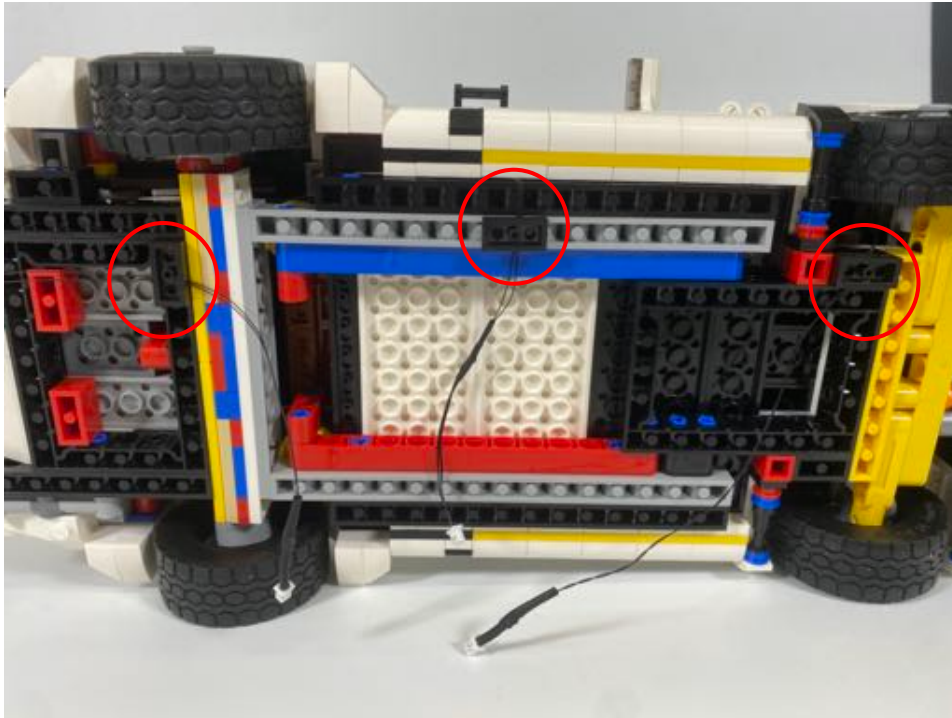

Install the lighting white plates first

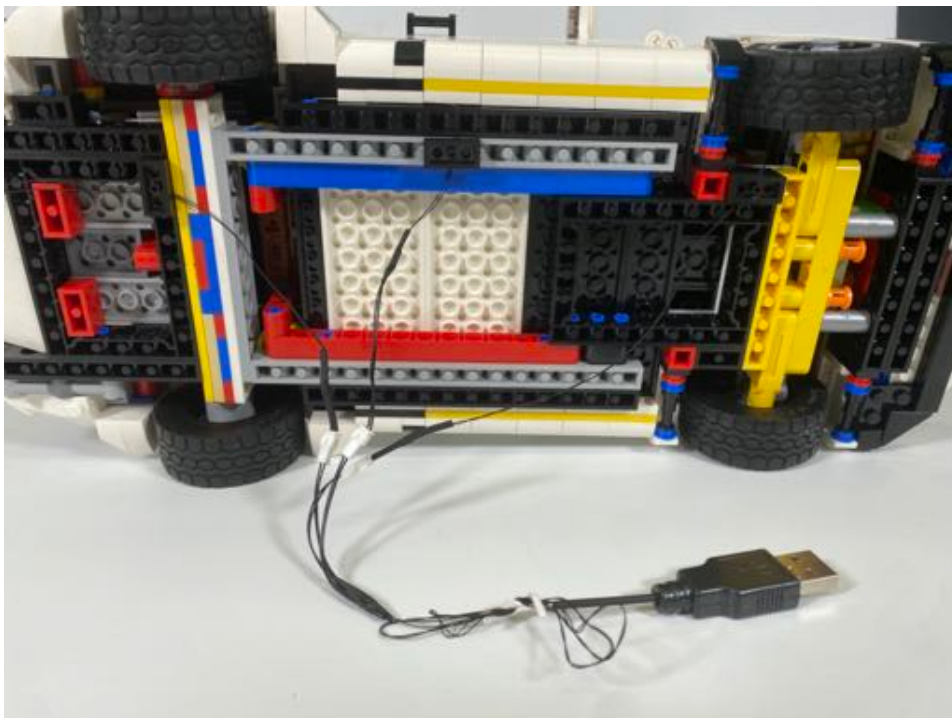

Then restore the white parts and install the front lights after

You can use the black 1x2 plates provided to stable the wires

If powered by USB, just simple connect the plugs

If powered by battery, connect to the battery case and stick it underneath the vehicle
