

Lego 10279

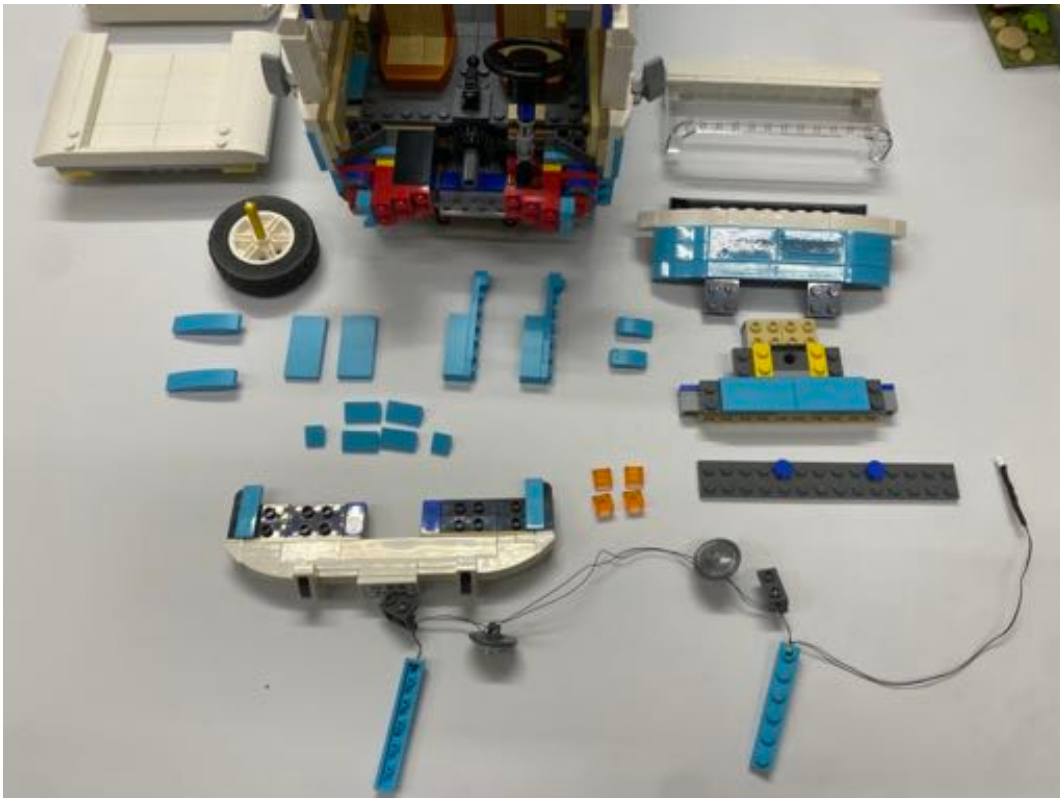

Volkswagen T2 Camper Van

Installation Guide

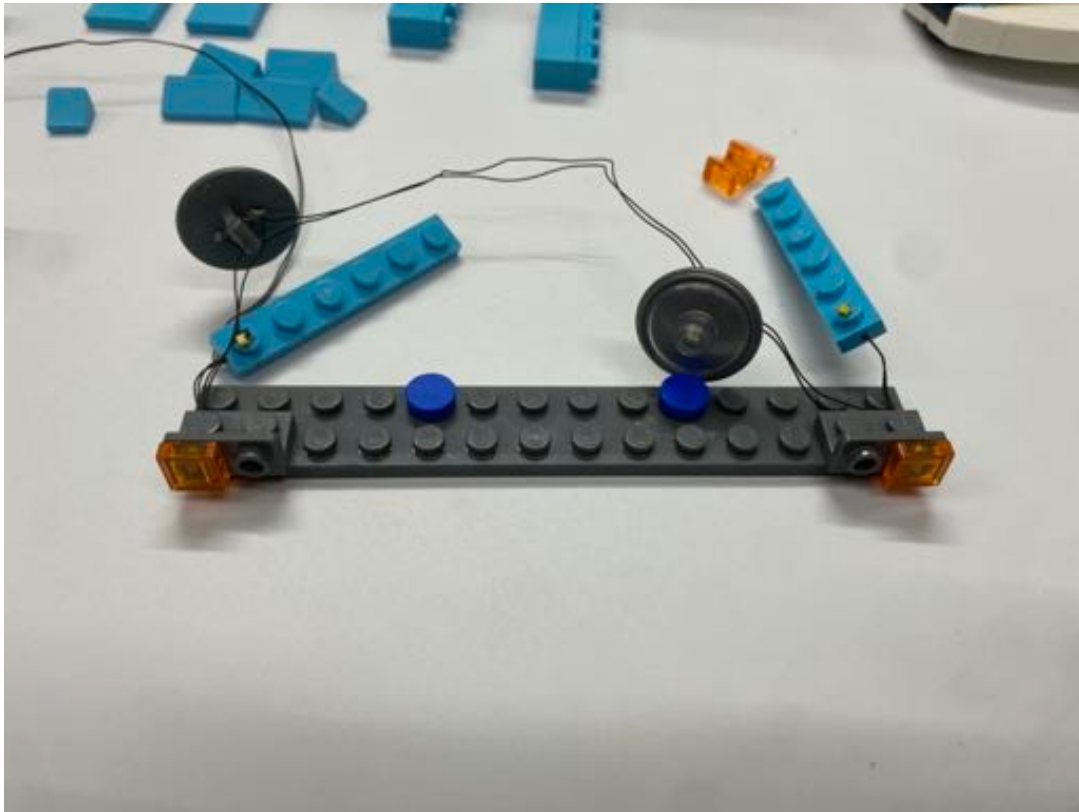

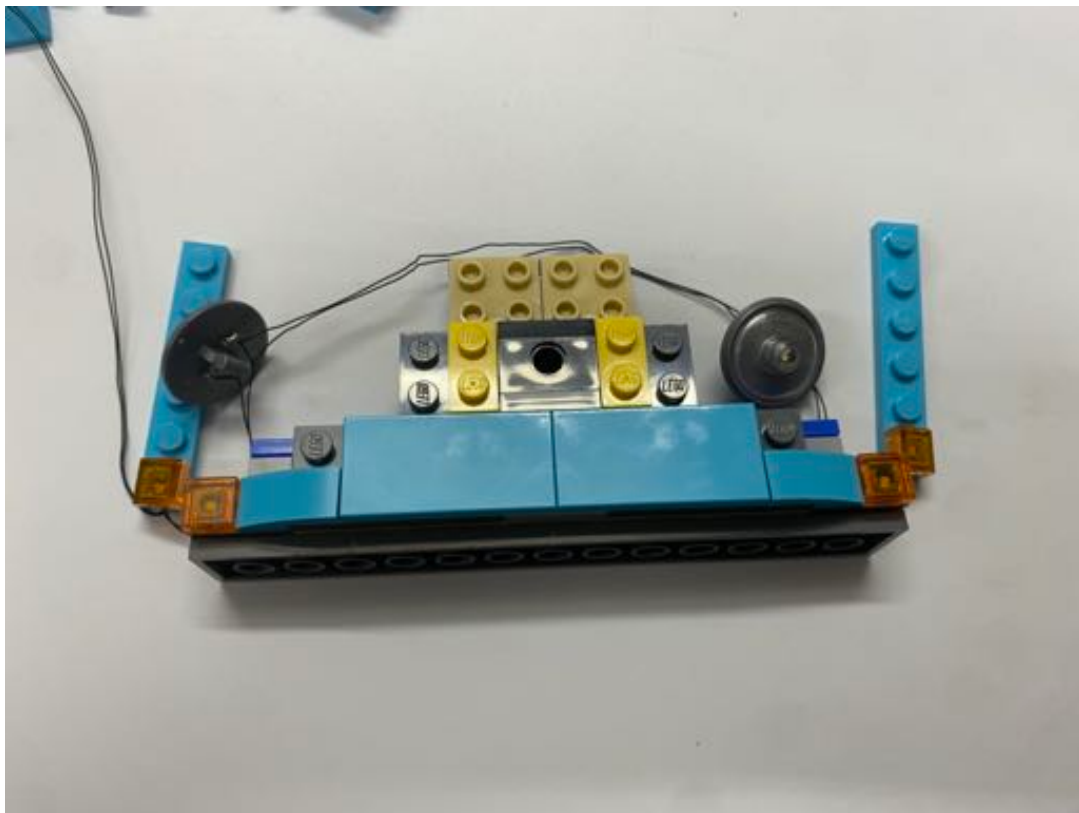

Take the lighting parts at the bottom of the picture
And detach the front part of the car as shown

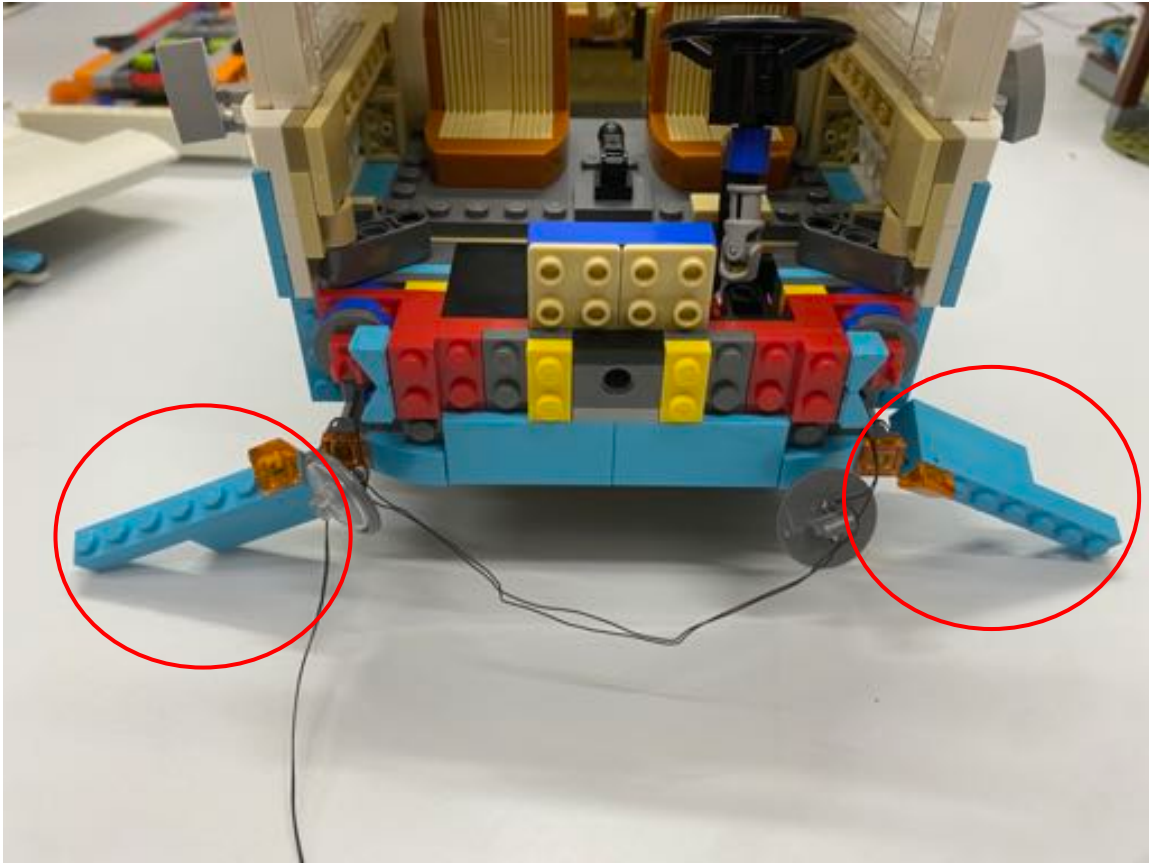

Install the lighting parts on the plate, and place the clear orange tiles on the lights

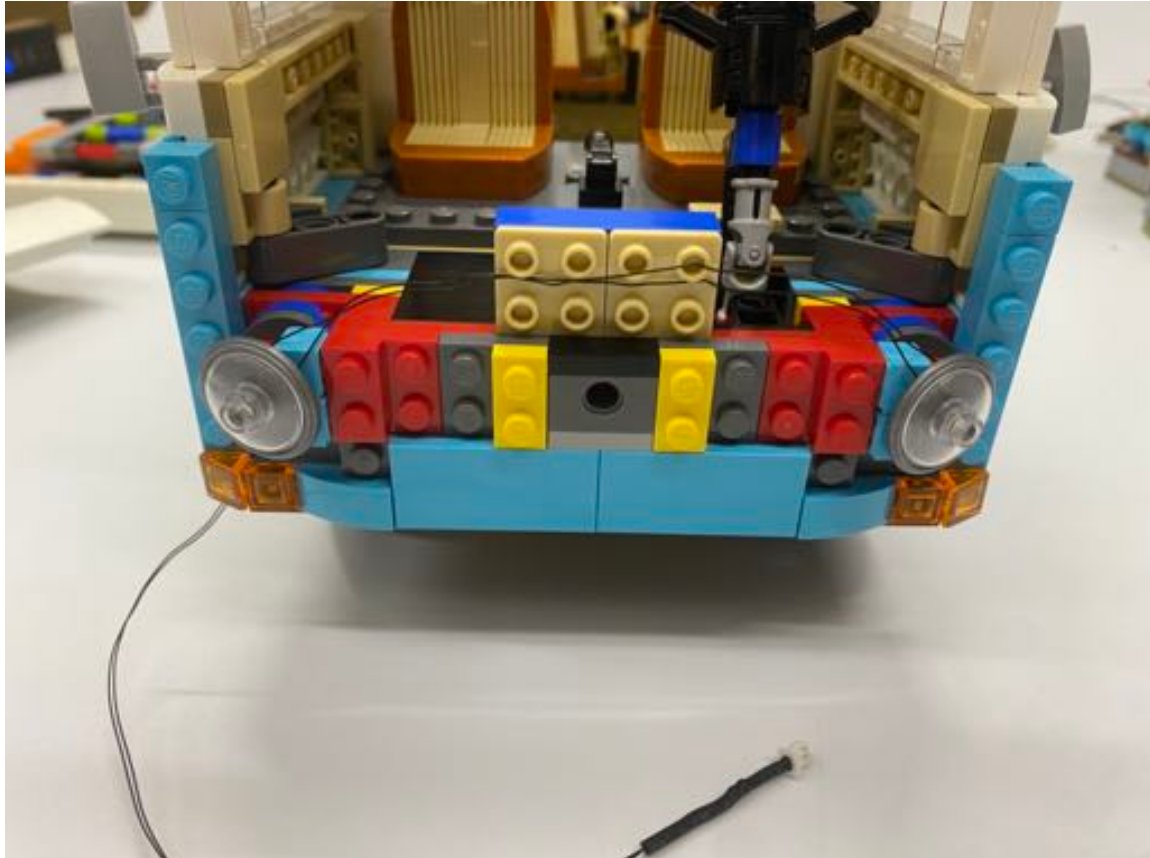

Place the clear orange slope on the lights of blue plate, then restore the bumper like this

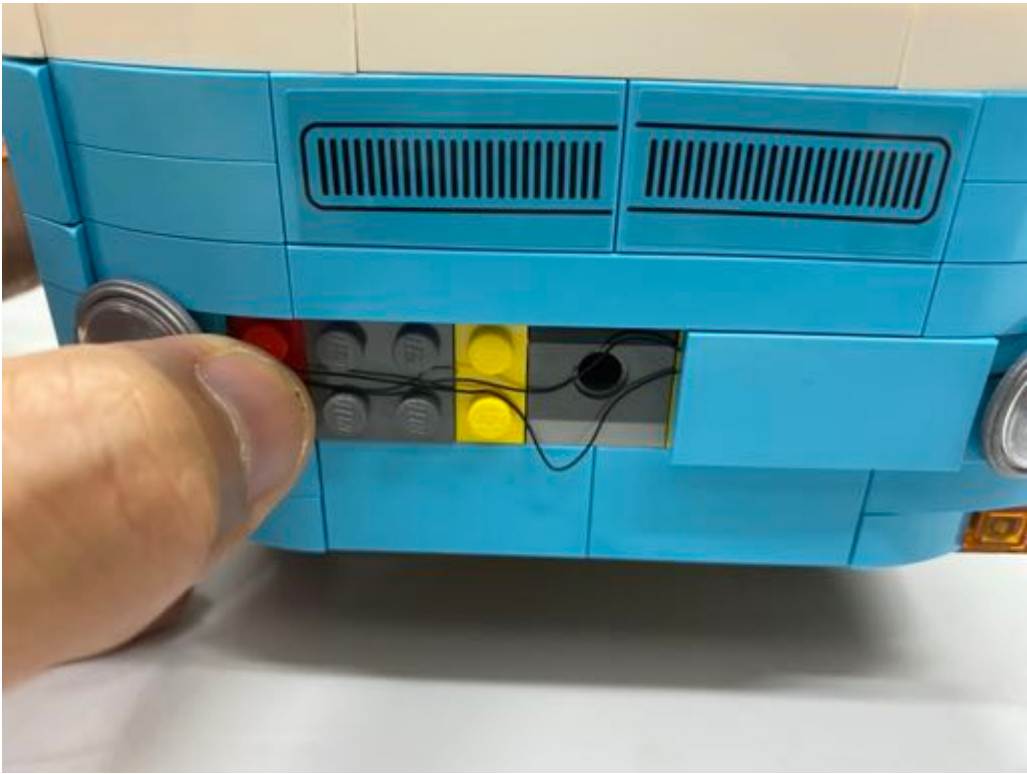

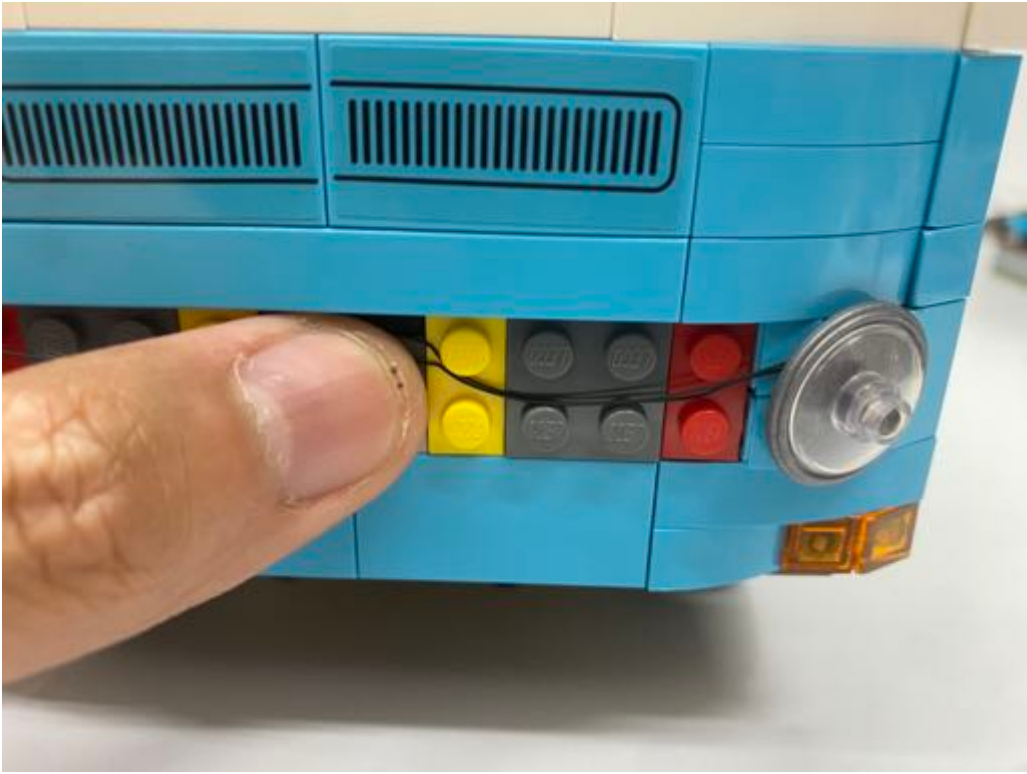

Recorp the upper bumper with the car, also the parts of the side

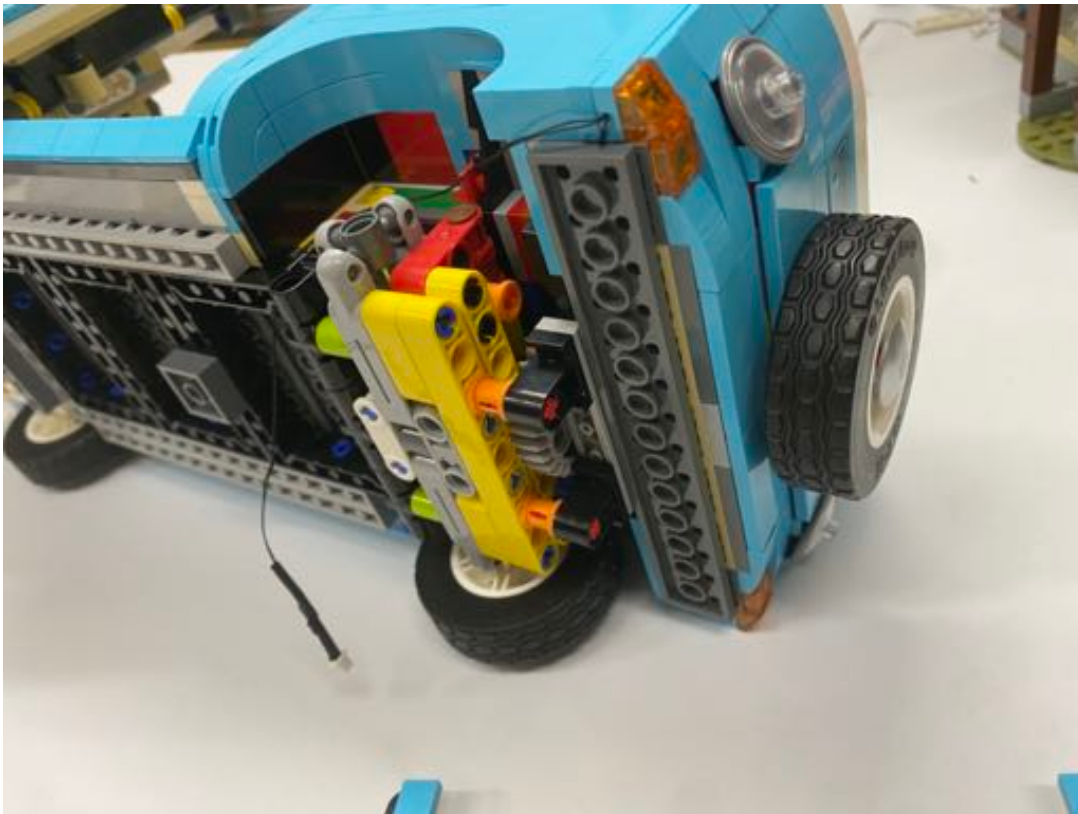

Restore the parts of previous step and the front car light

Restore the upper part, to restore the 2x4 tiles you need to stable the wires in between the studs to avoid breaking the wires when restoring the tiles

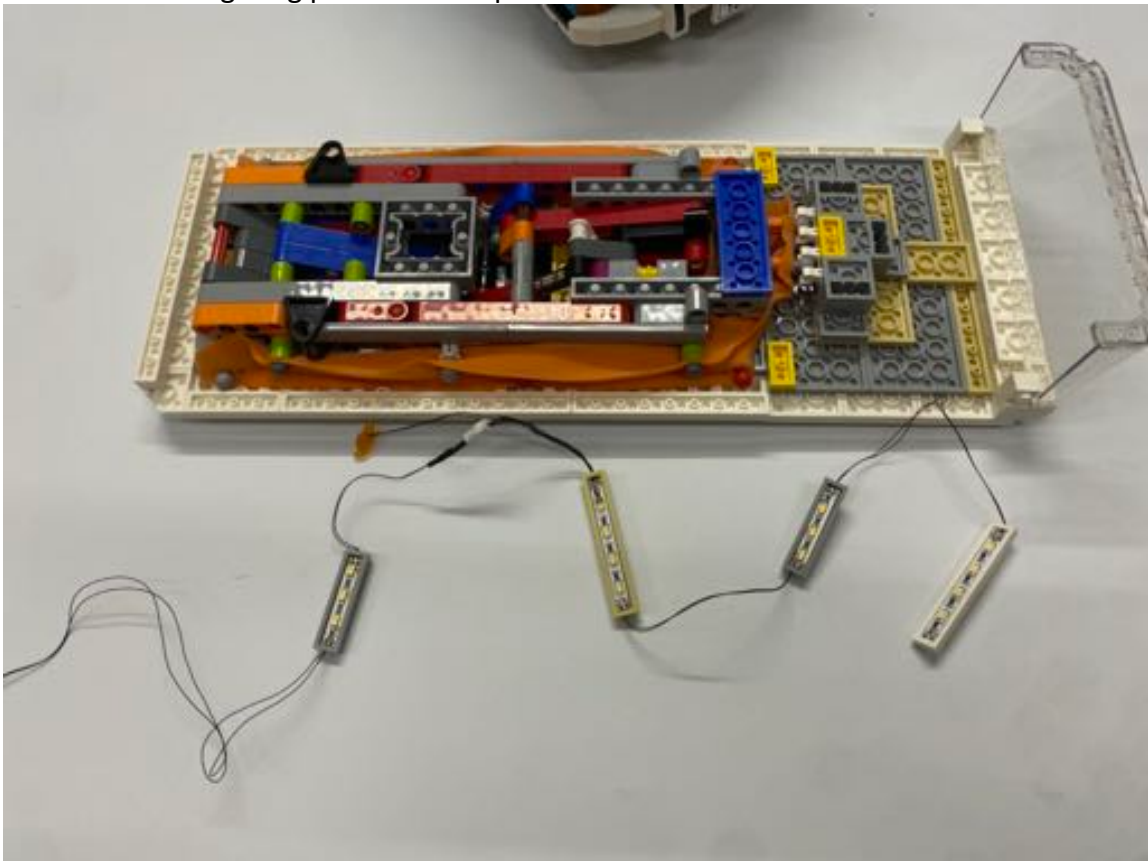

Place the connector to the bottom of the car

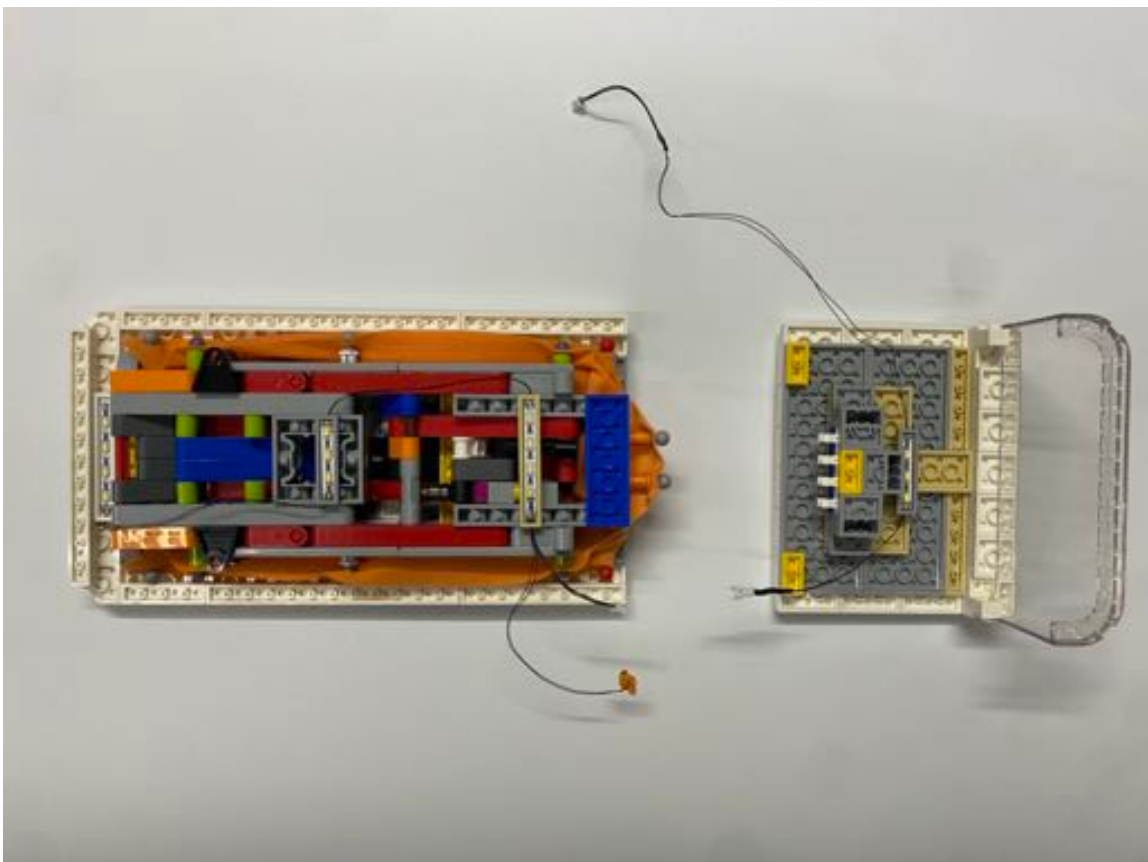

Then the front part lighting installation is done

Now take this lighting part for the top

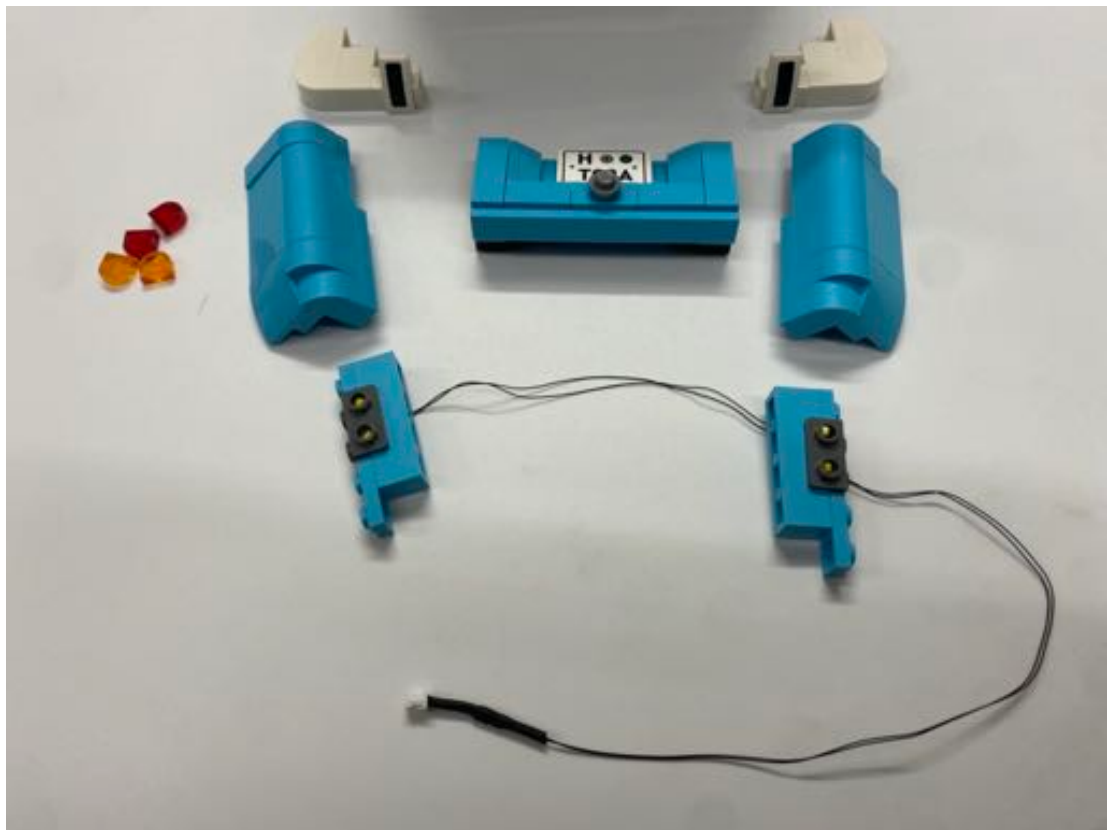

Install it as shown
Beware of the position of the fire

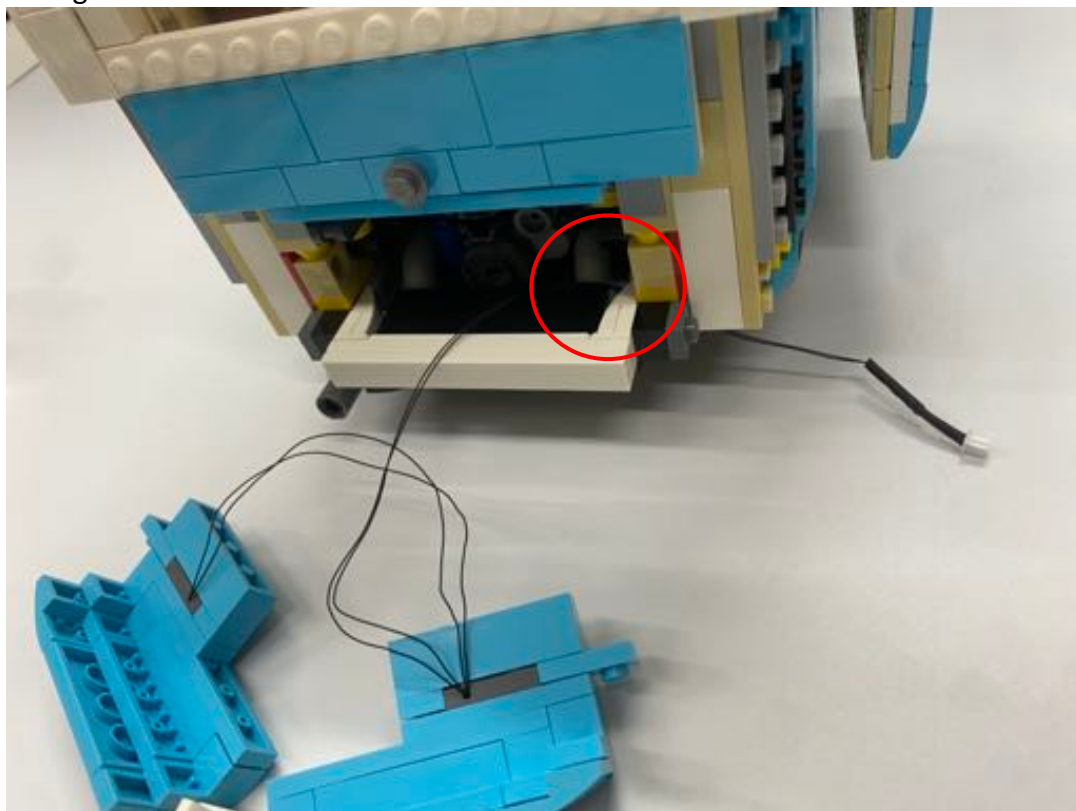

Now it's turn for the rear side, detach the following parts

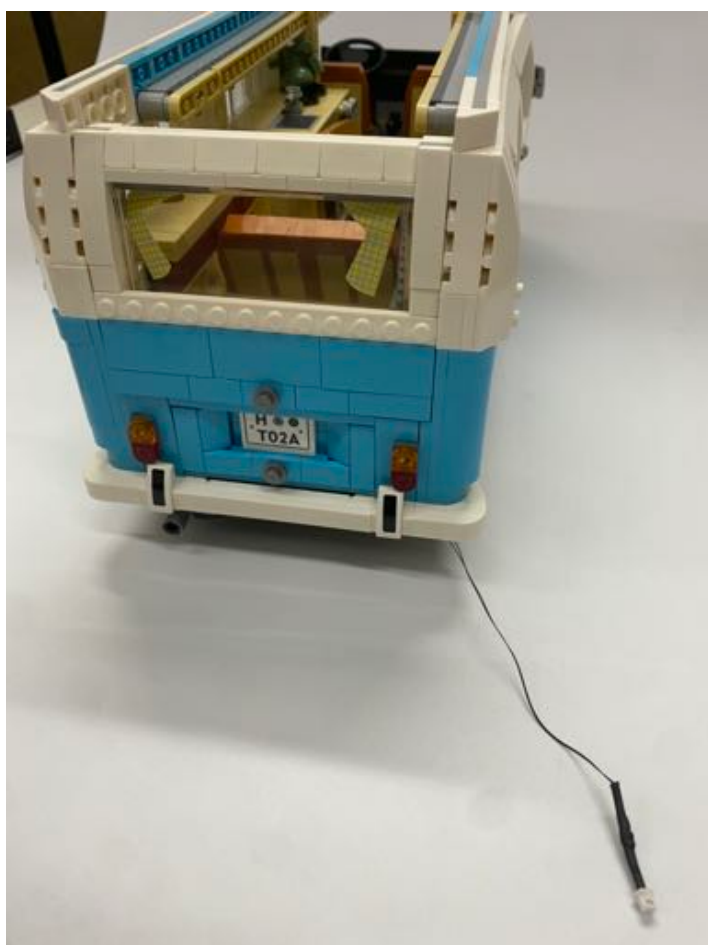

Replace the grey part by the lighting parts

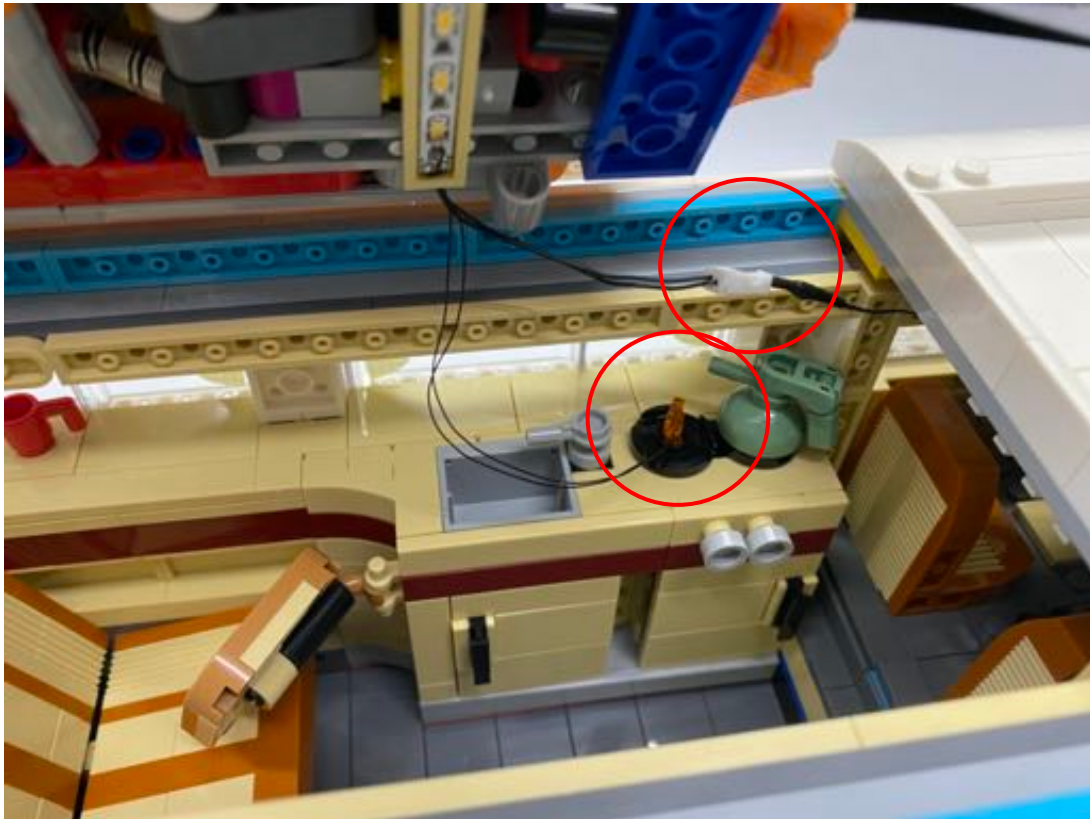

Before restoring the parts, need to pull the connector to the bottom by getting through the hole

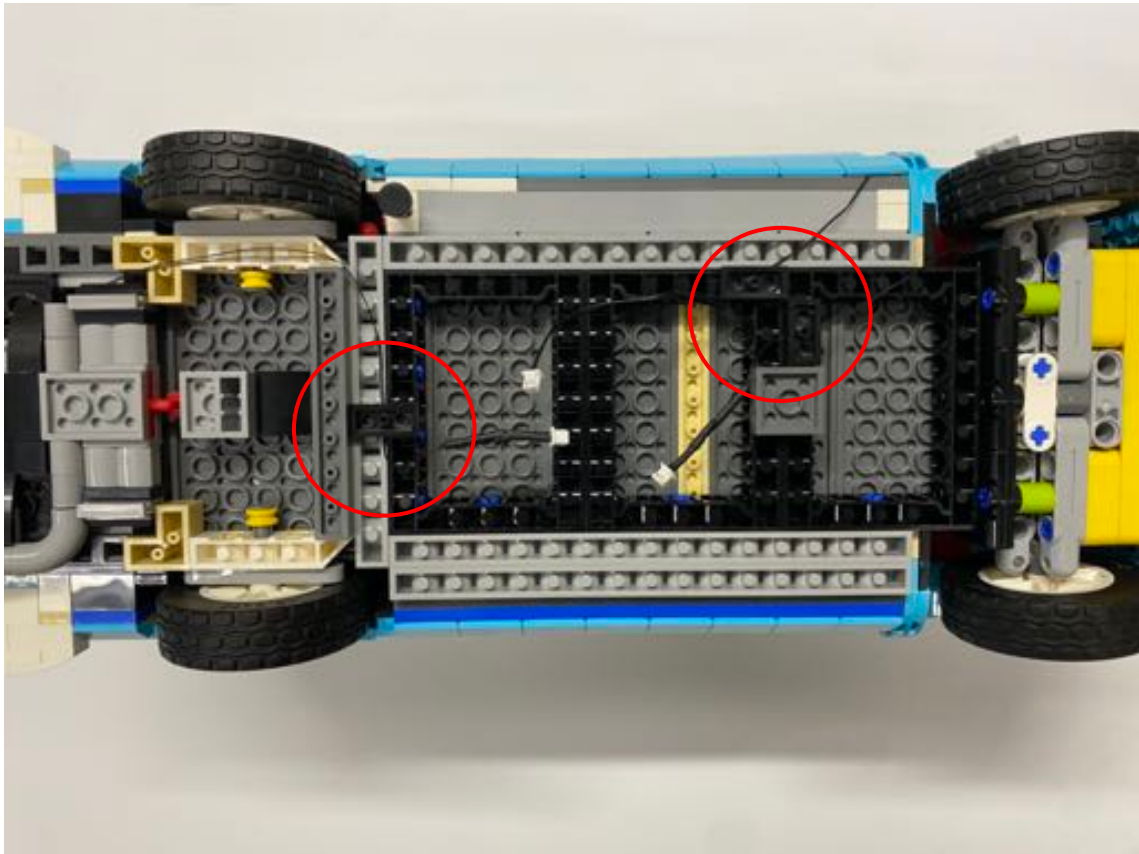

Then you can restore the rear side

Now connect the connector of the remain top as well the fire on the stove
Then restore the top, and remember to check does the top able to flip up

Place three connectors to bottom, stable the wires by the plates provided

Now you can choose to power by battery or USB
