

Lego 75969

Harry Potter **Hogwarts Astronomy Tower**

Installation Guide

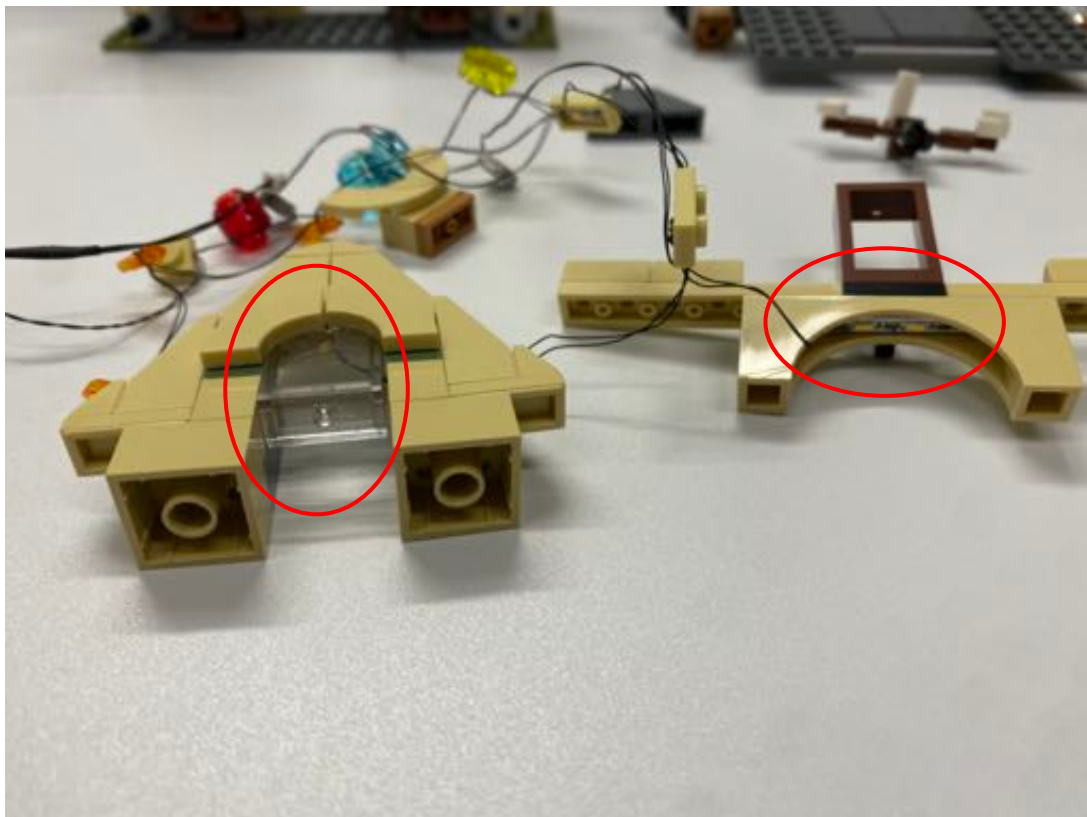

Start by splitting the building
Then take the following lighting parts for this side of the house

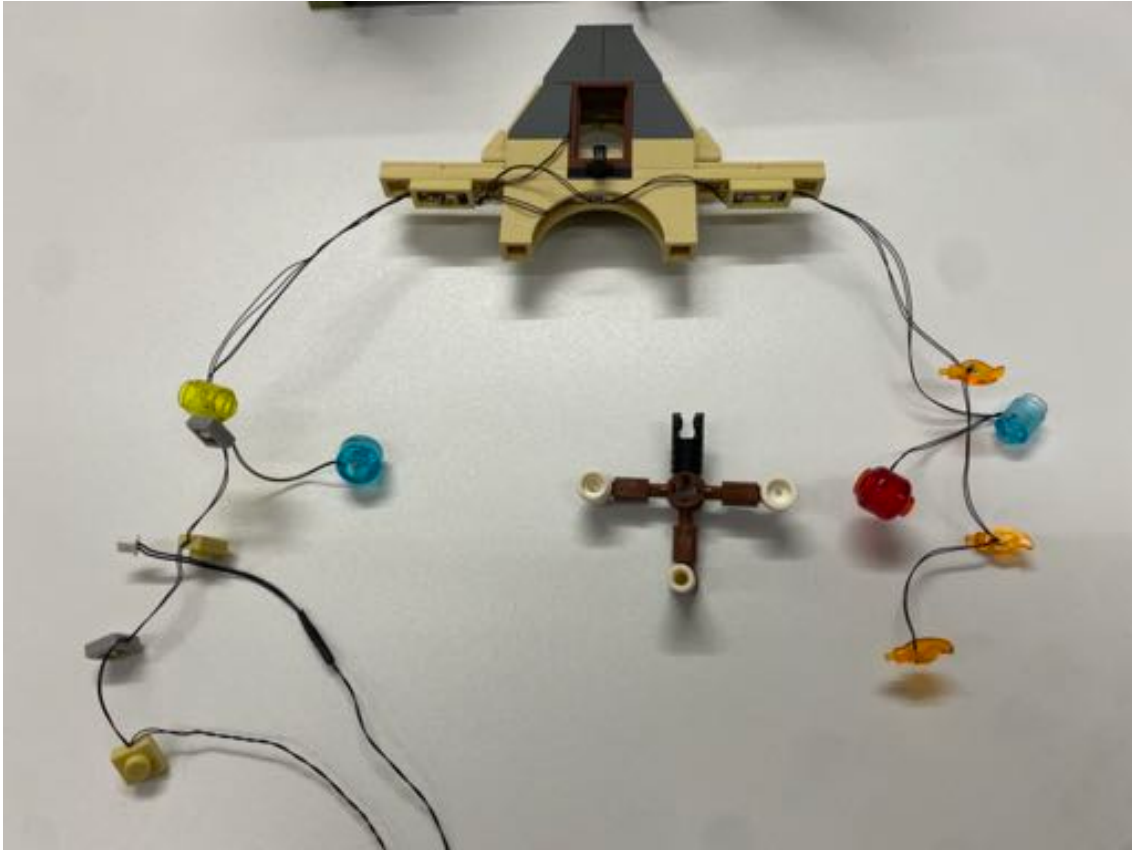

Detach the top of the front side as shown

Replace the clear block of the house by the lighting part
Stick the light underneath the arch

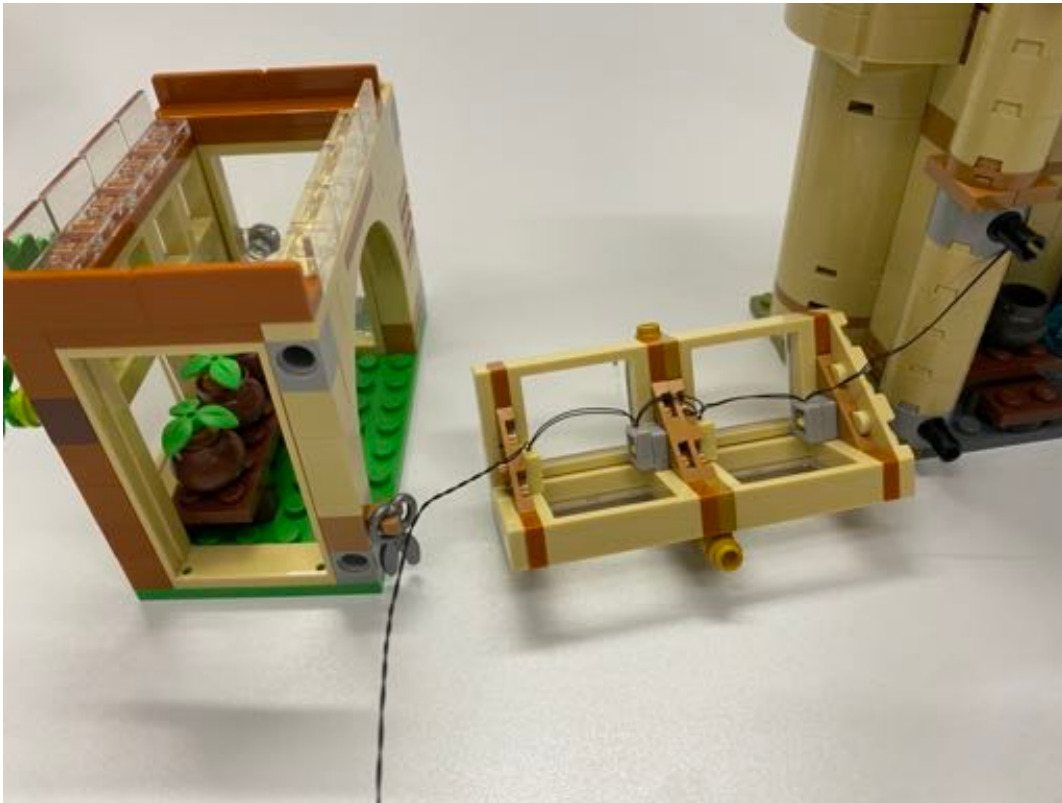

Combine the parts of the previous step, assemble the 1x2 lighting plates on both sides
Make sure to follow the direction as shown

Restore the top, then assemble the fires on candle and the clear lighting parts on table

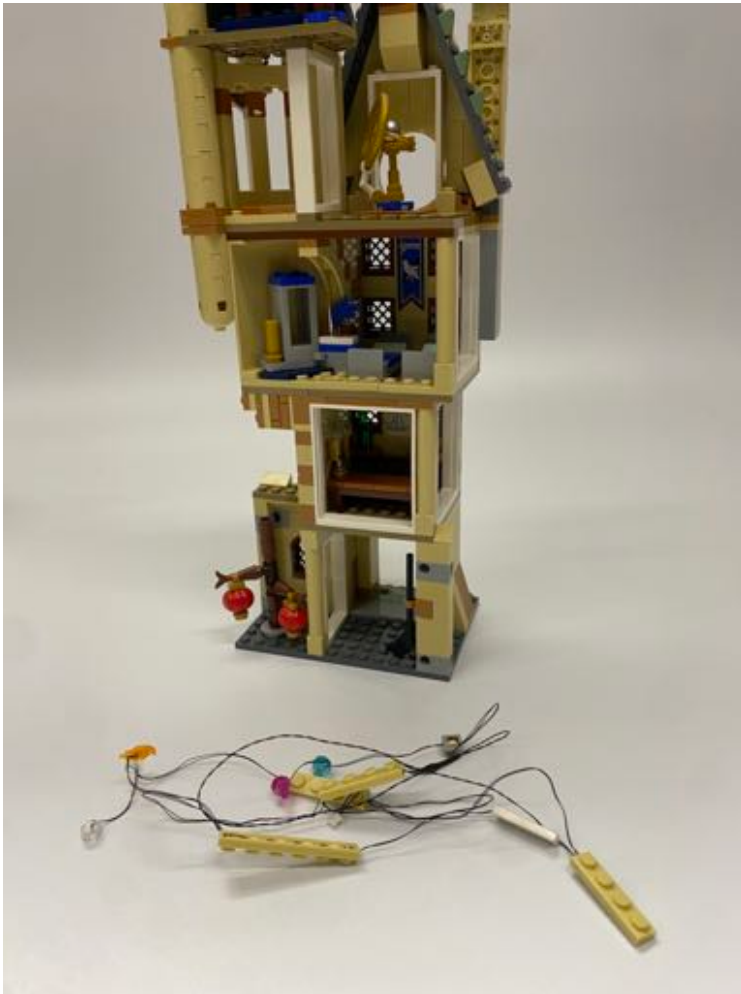

Remove the top of the attached building, stick the remain lighting parts to the top

Now you may put the roof back and restore the building

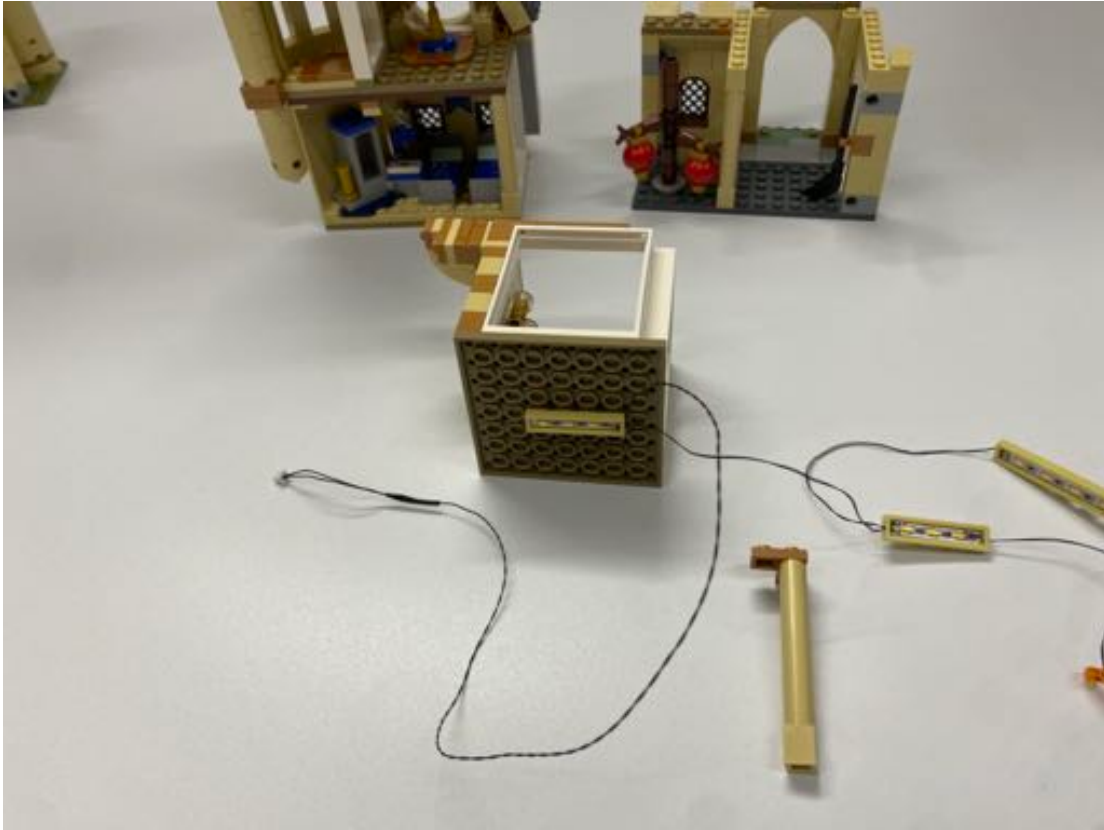

Now it's turn for the other side

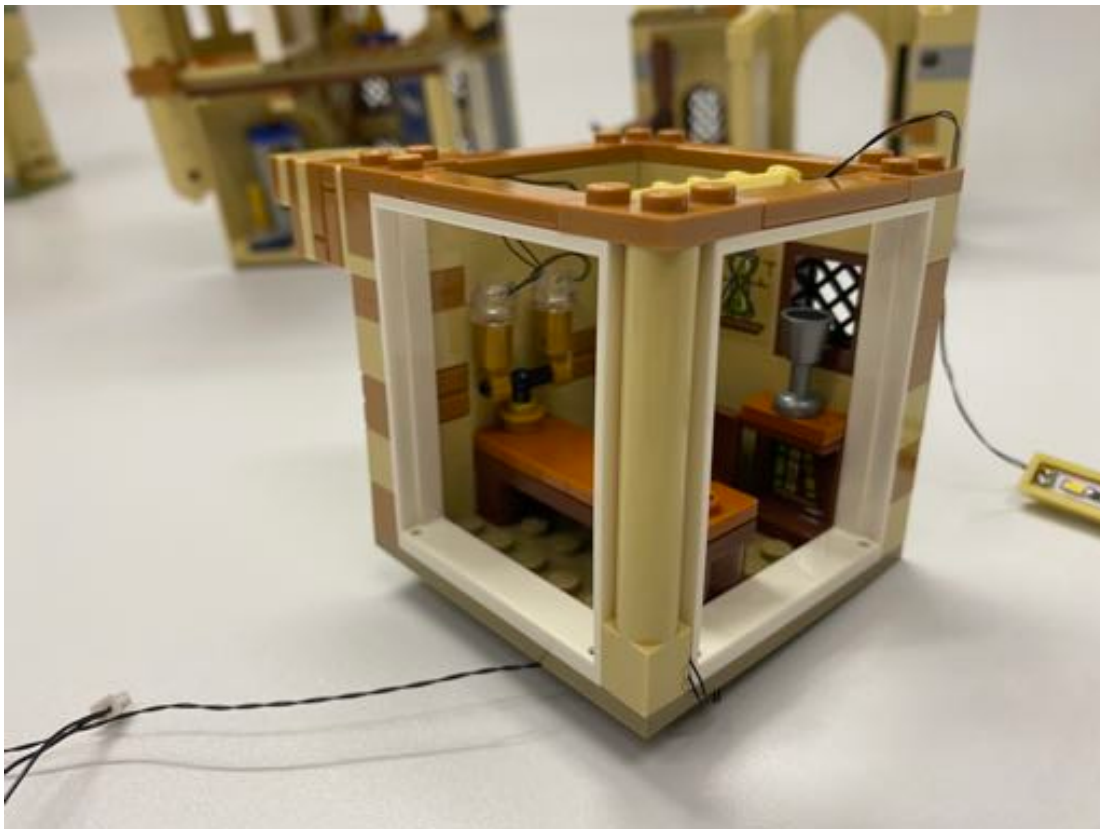

Same as the previous side, split the building as shown

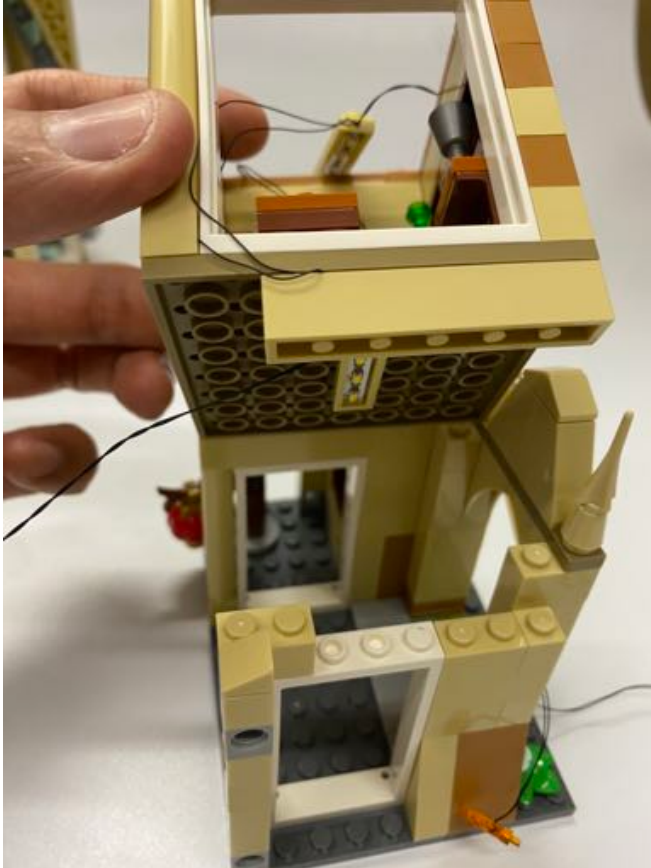

Assemble the 1x4 plate next to the connect to underneath the 2nd floor
Then remove the pole in purpose to pull the remain lights upward

After that restore the pole, install the two lighting clear round plates to the candle

Before combining the 2nd floor with the 1st, clip the wire in between the studs of the block attached to prevent it got broken

Put the rest of the building to the top and push the 1x4 plate into the ceiling

Pull the lights into the building by removing pole, the similar way as downstairs
Install the 1x6 as ceiling light and the fire to candle

Then assemble the 1x4 lighting plate and the white lighting tile

At last, stick the 1x1 lighting tile and install the lighting diamonds

Connect with the USB cable and that's all~
