

# Lego 21042

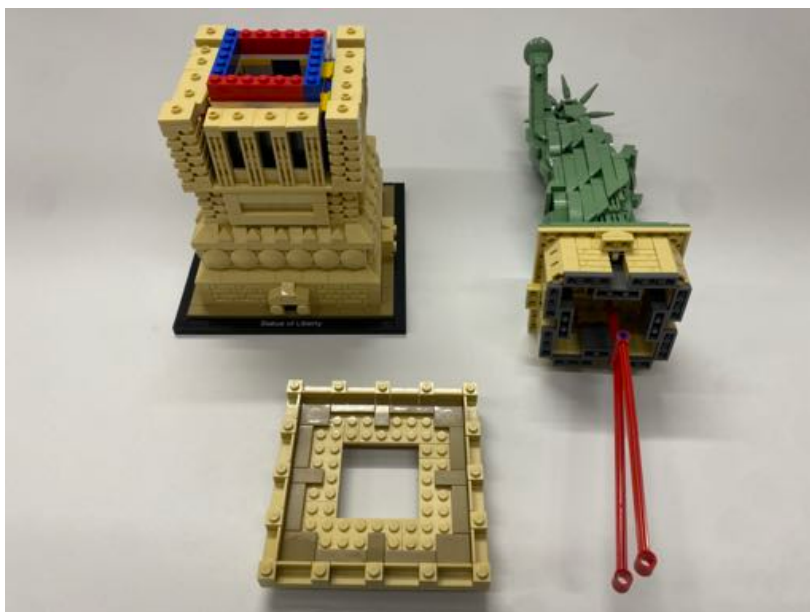

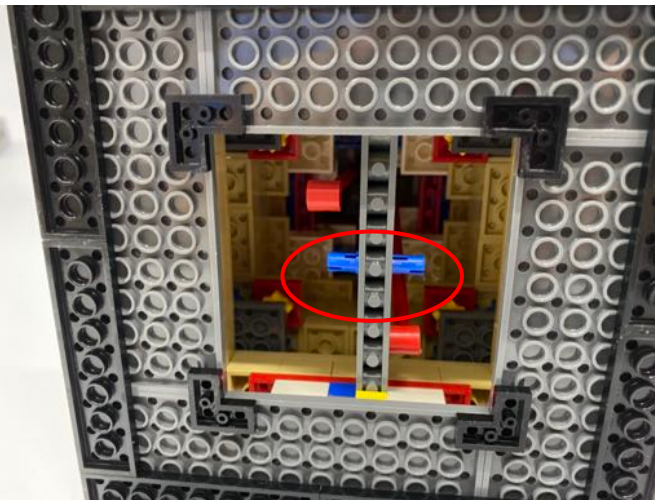

## *Statue of Liberty*

### *Installation Guide*

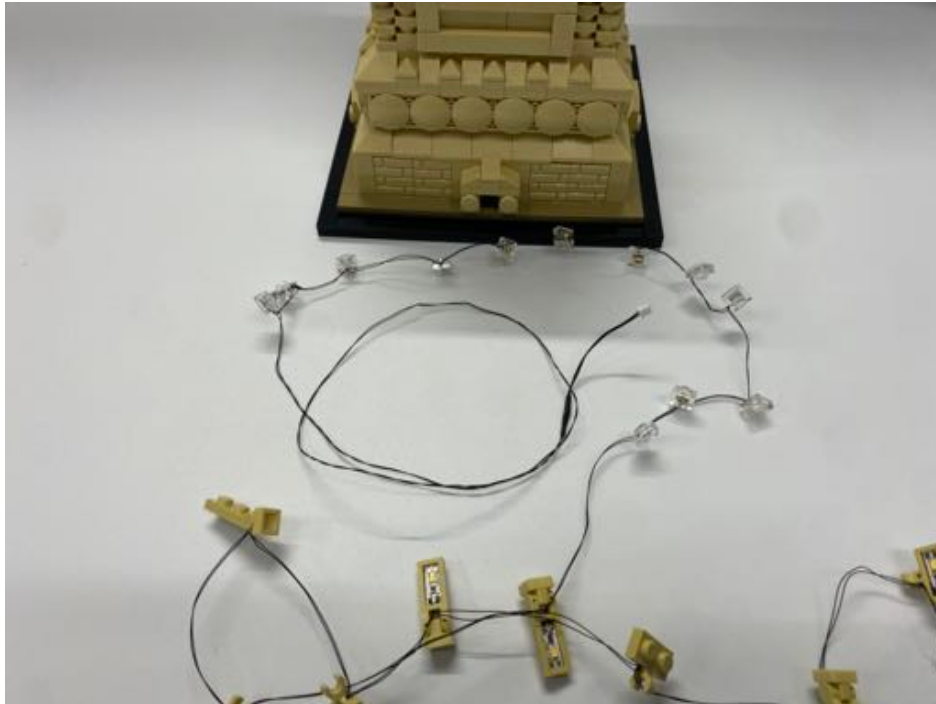

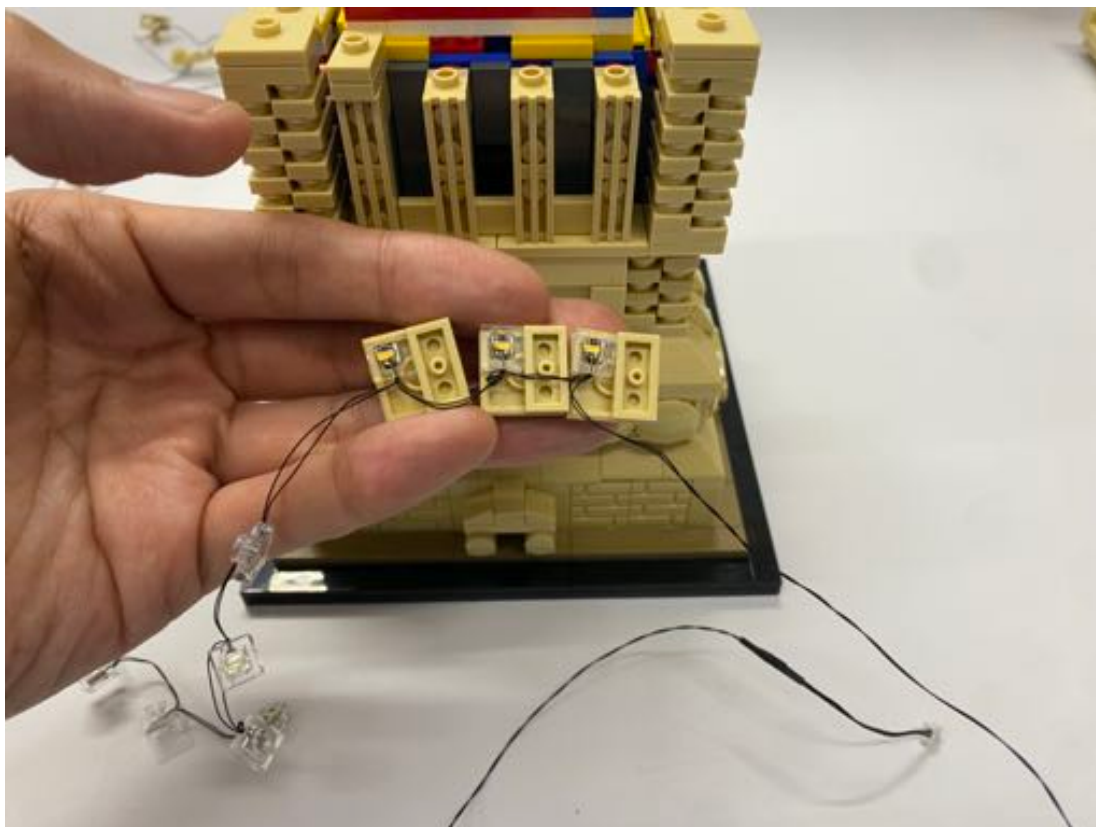

Start by splitting the statue after detaching the lock from bottom

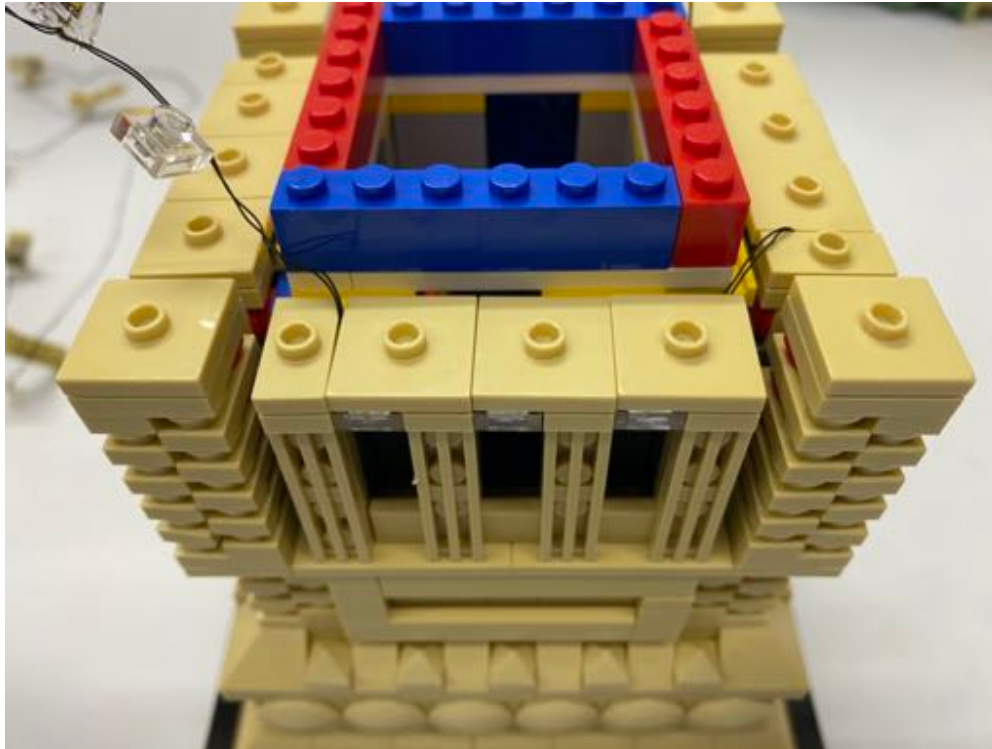

Take out the following lighting parts to install at the base

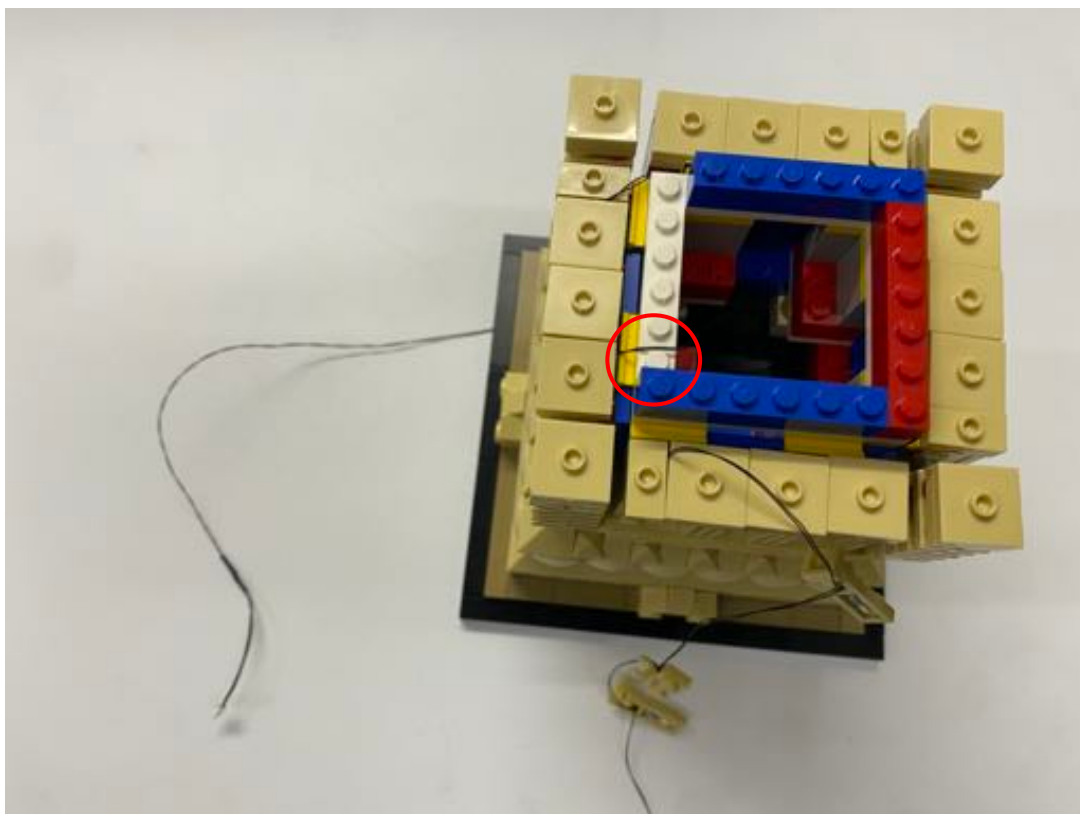

Turn around the base and start installing from the back  
Install the lighting plates next to the connector first

Then install the remain lighting plates for the other 3 sides

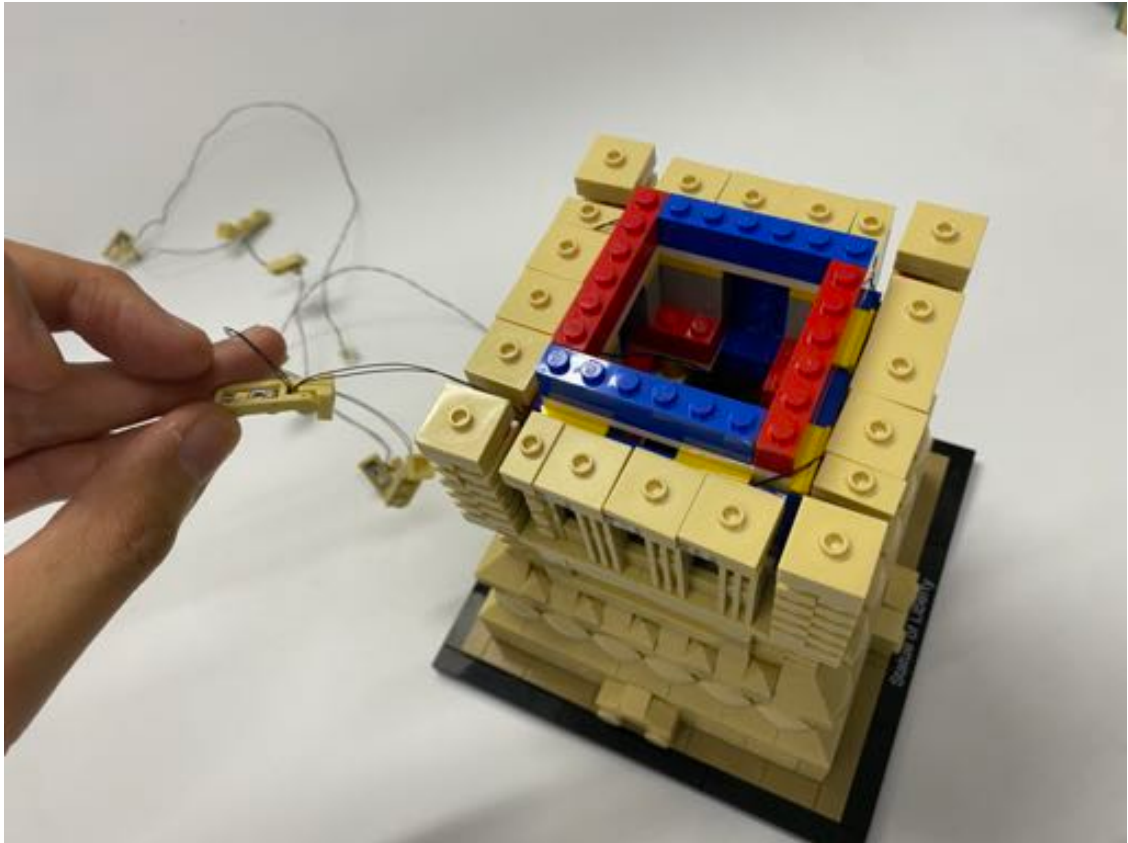

After installing 4 sides, take the blue brick, put the wire with connector in between the studs then restore the brick

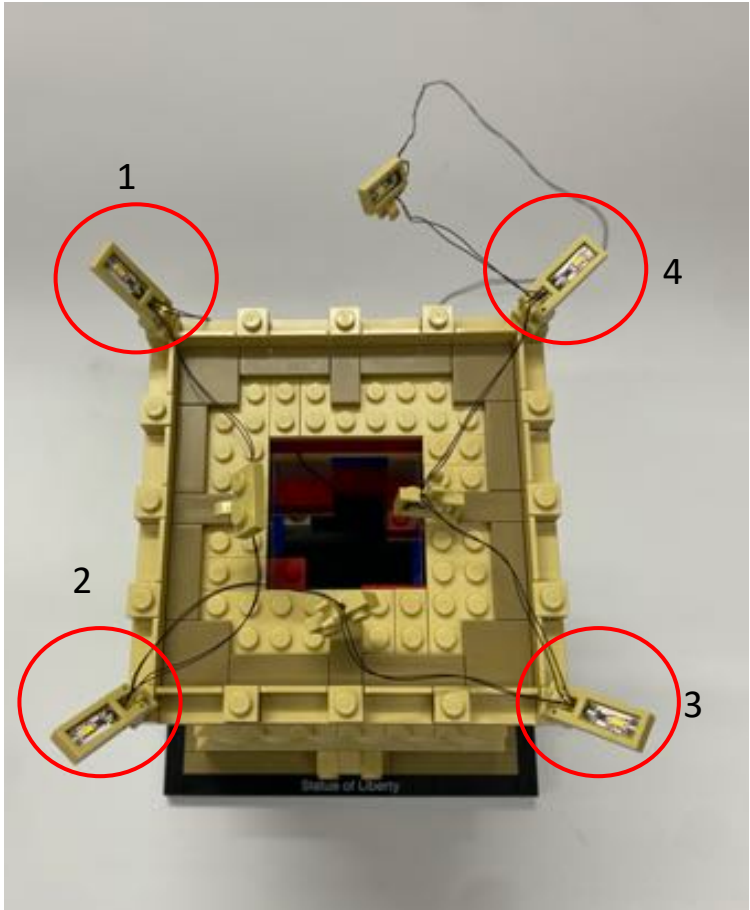

Then take the spot light out from the corner

Put the top back, then install the spot lights to 4 corners by this order  
Beware the last one should be installed on the side facing the back

Put the statue back to the base, then remove the following tan parts  
Switch the slopes on the lighting parts then install to the statue

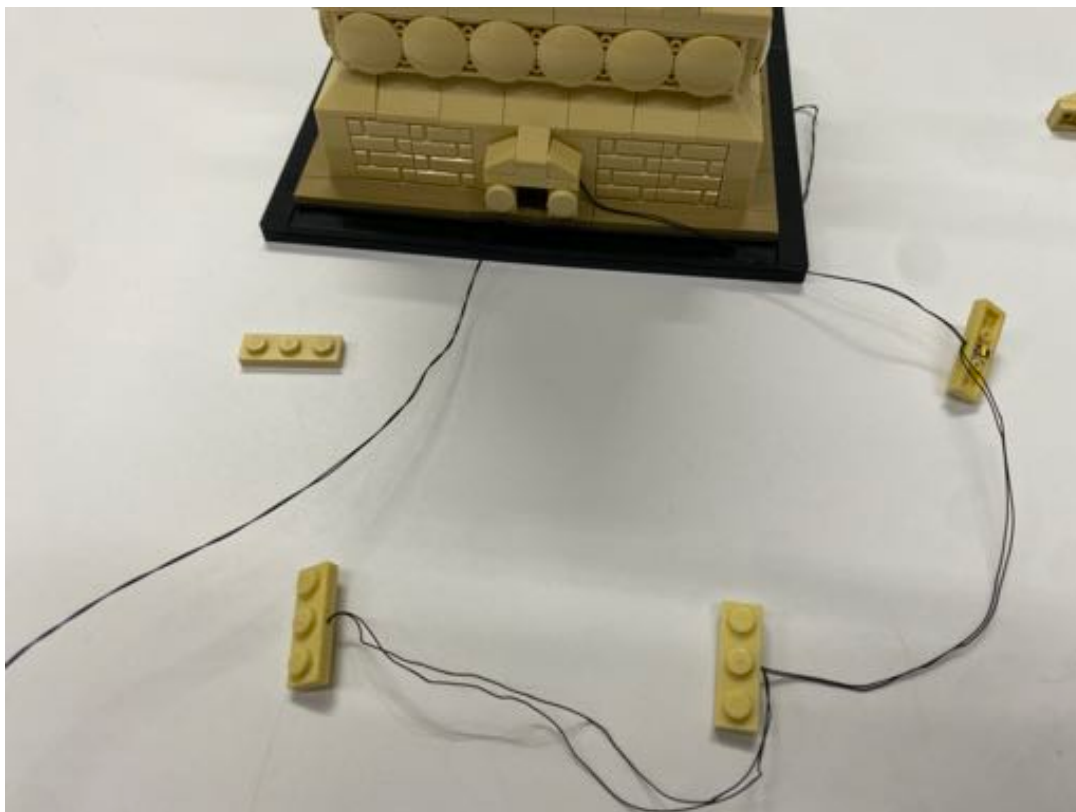

Then pull the clear lighting round plate to the top

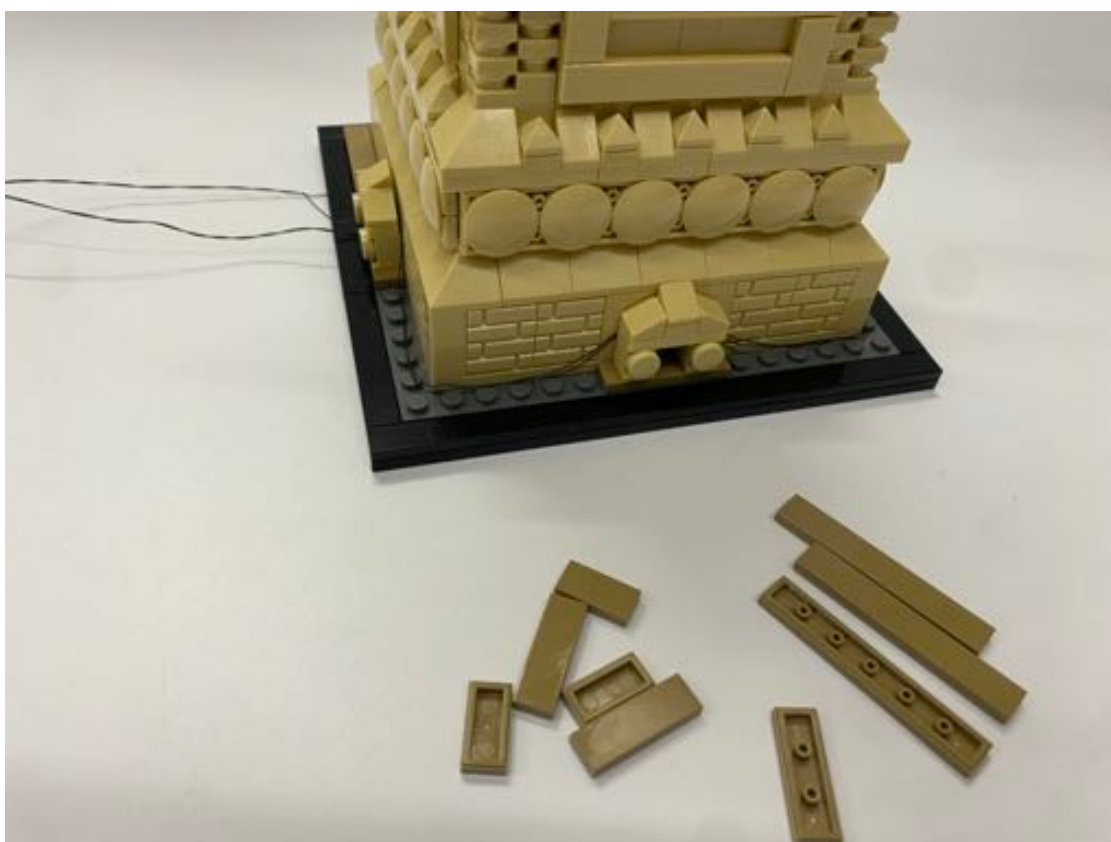

For the bottom, remove the following parts

Install the lighting 1x3 plates, the one next to connector has to be on the back side

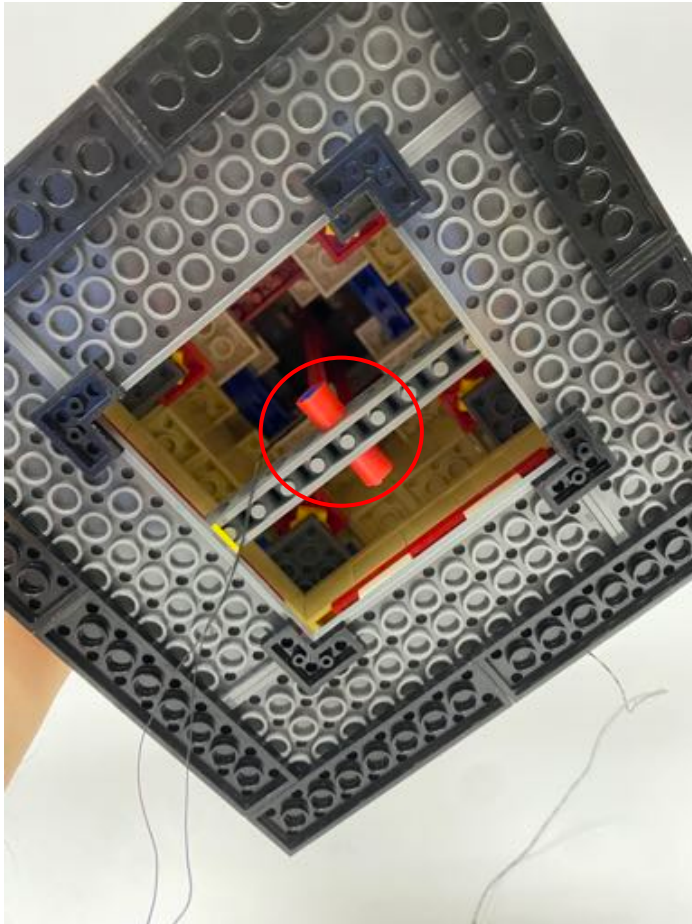

Remove the dark tan tiles, hide the wires underneath after installing all the lights

At last, remember to lock the statue

Connect with the USB cable then it's done
