

Lego 21051

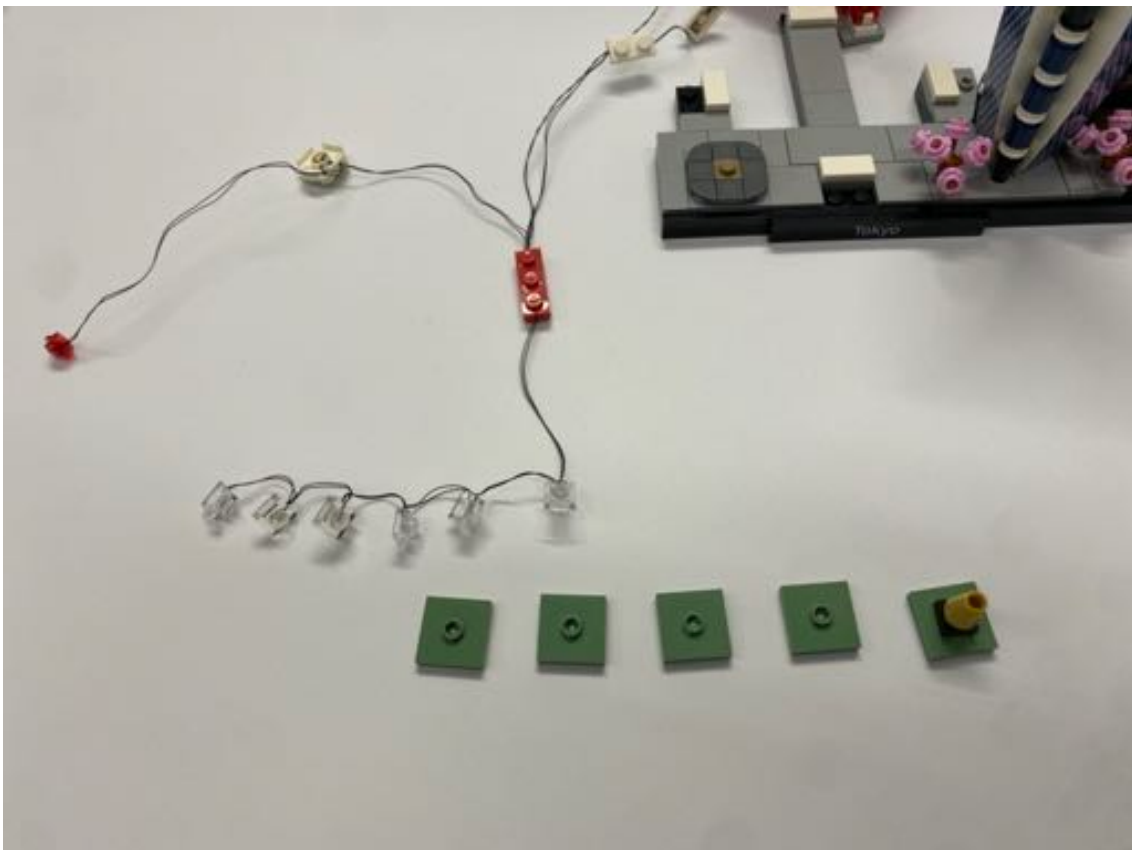

Tokyo

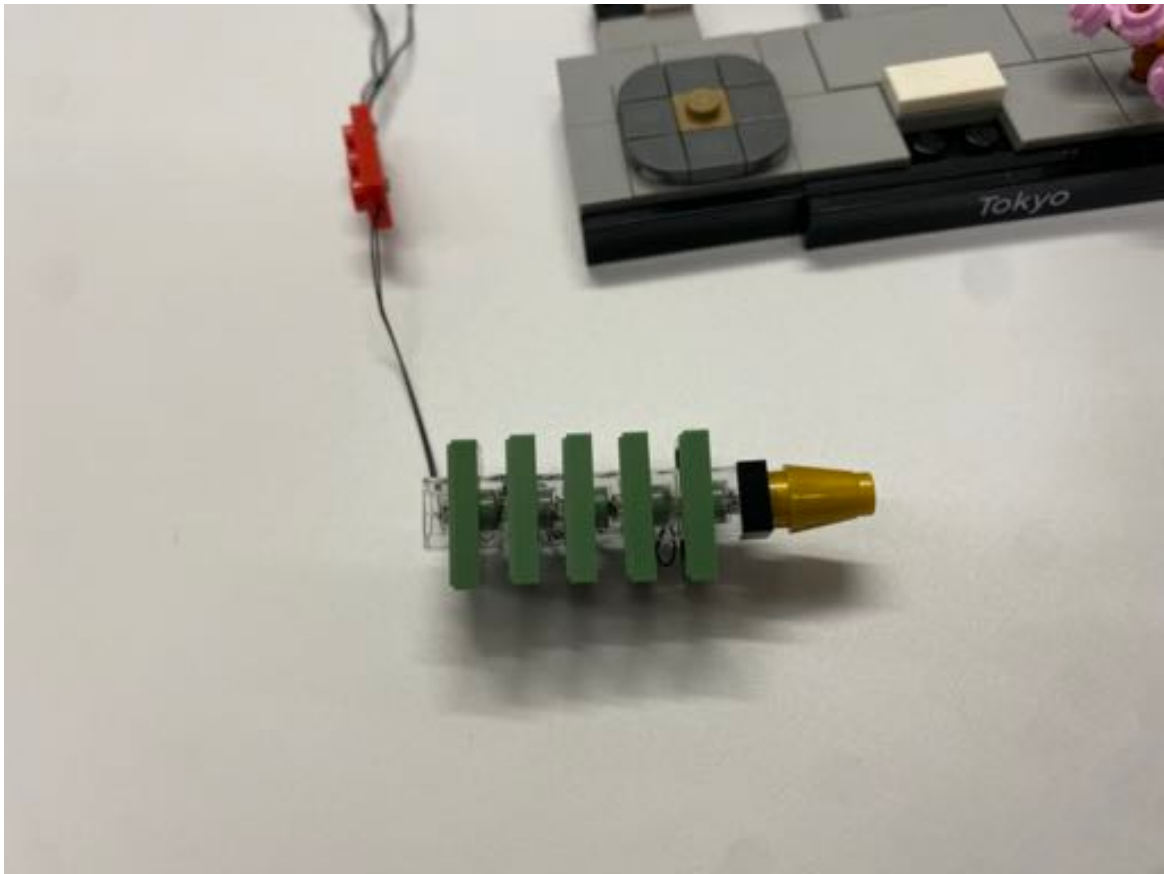

Installation Guide

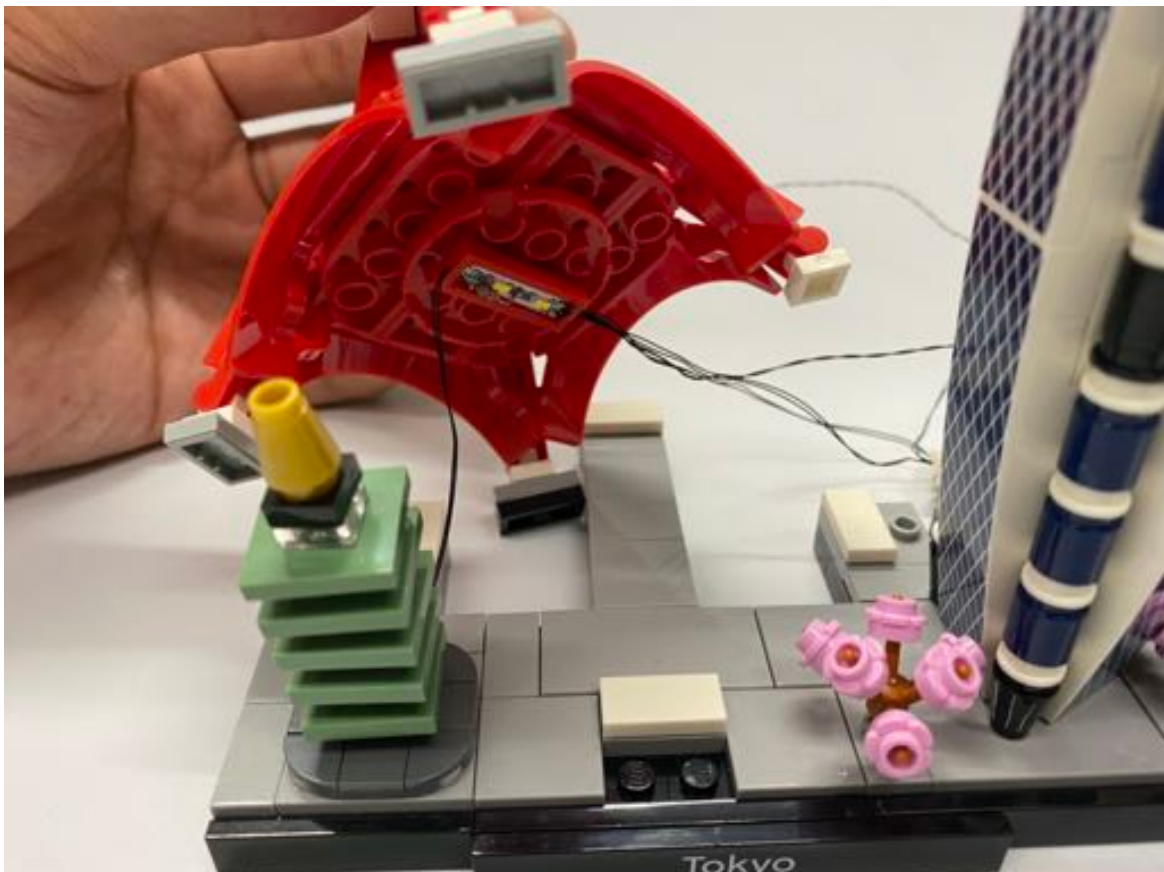

Start from the left side of the model, split the green building and remove the 1x1 plates in between and replace by the lighting plates

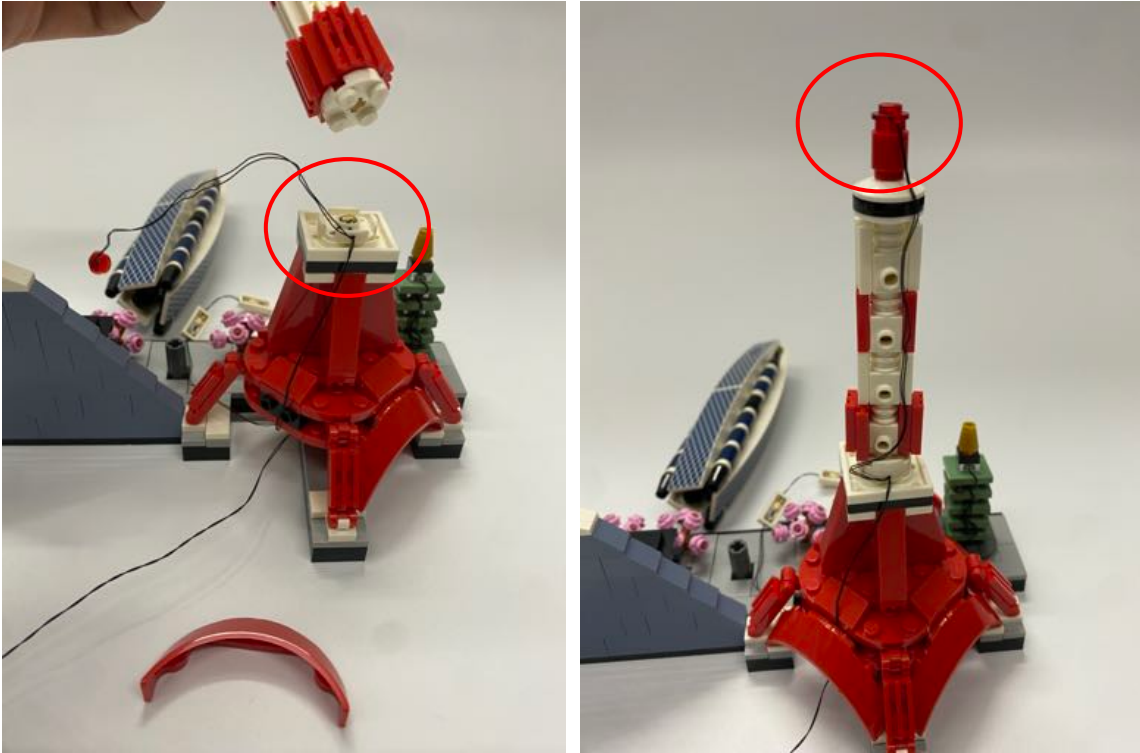

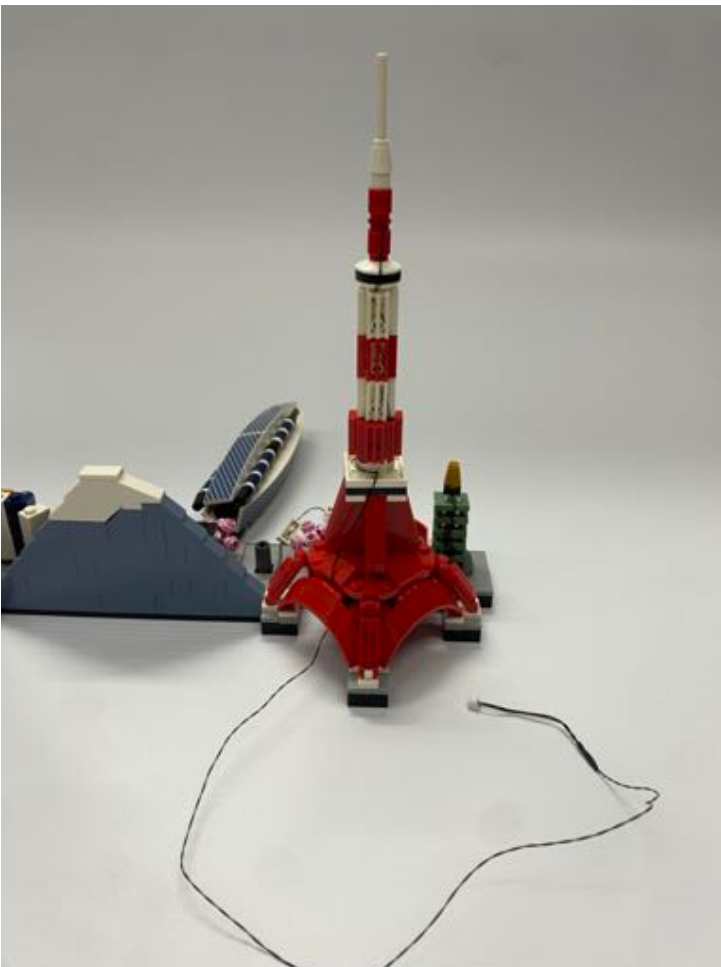

Put the green building back, lift up the Tokyo Tower and install the 1x3 lighting plate underneath

Install the 2x2 round lighting plate and red round plate to certain place of the tower

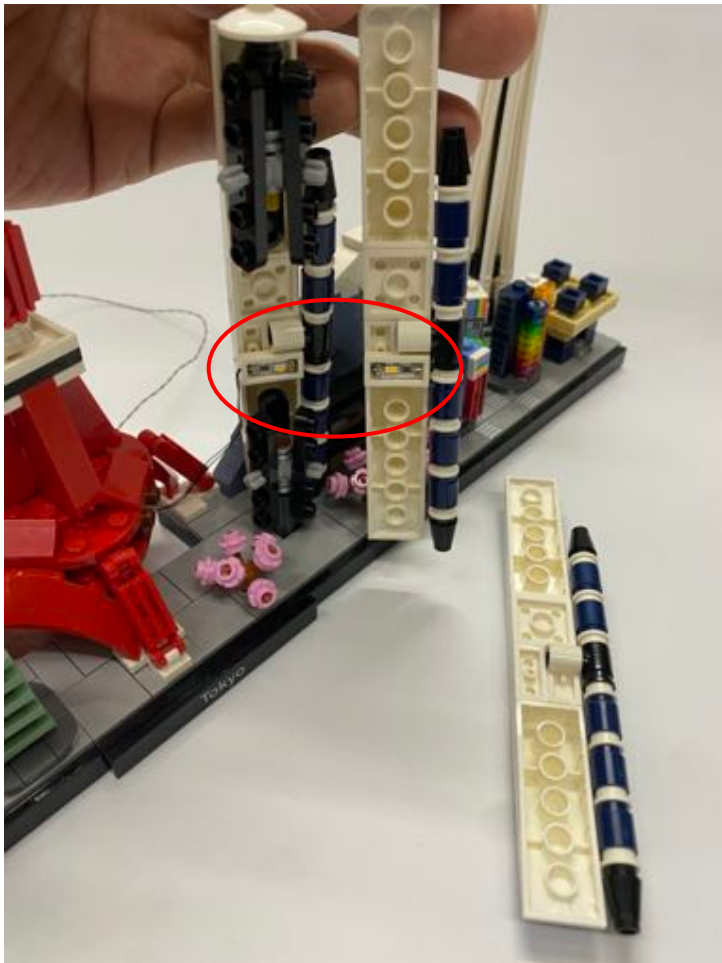

Then restore the tower

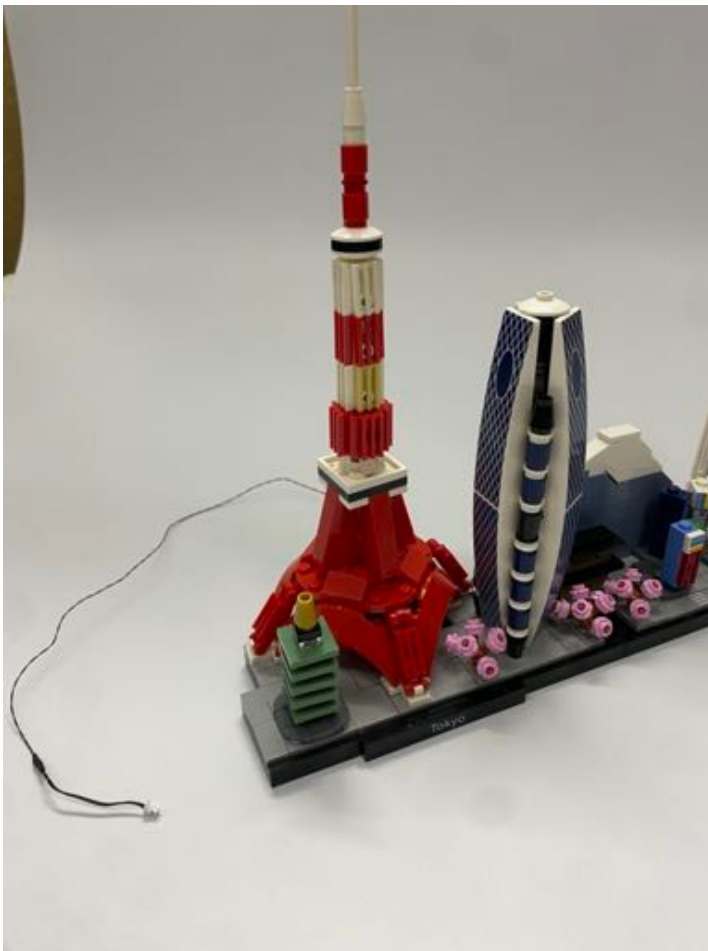

The white 1x2 lighting plates pull to the front and remove the blue building

Take the side layer off and install the lighting plates

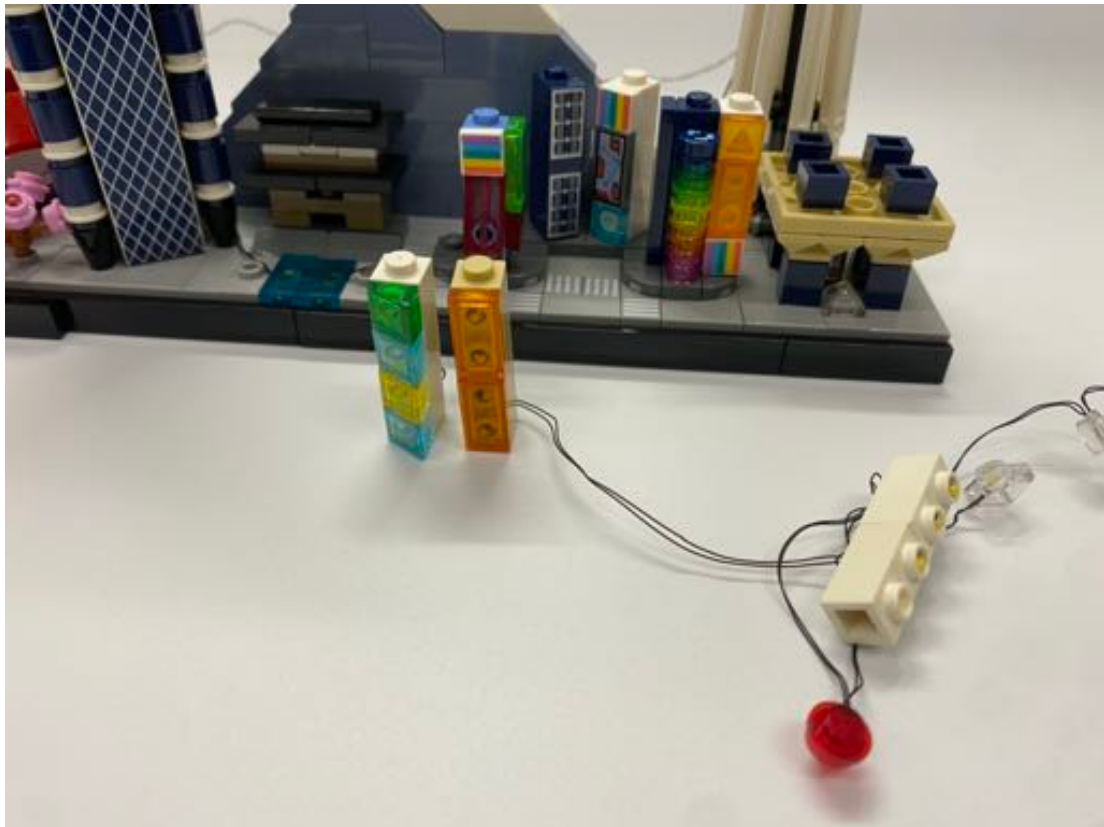

The left side of the model is done

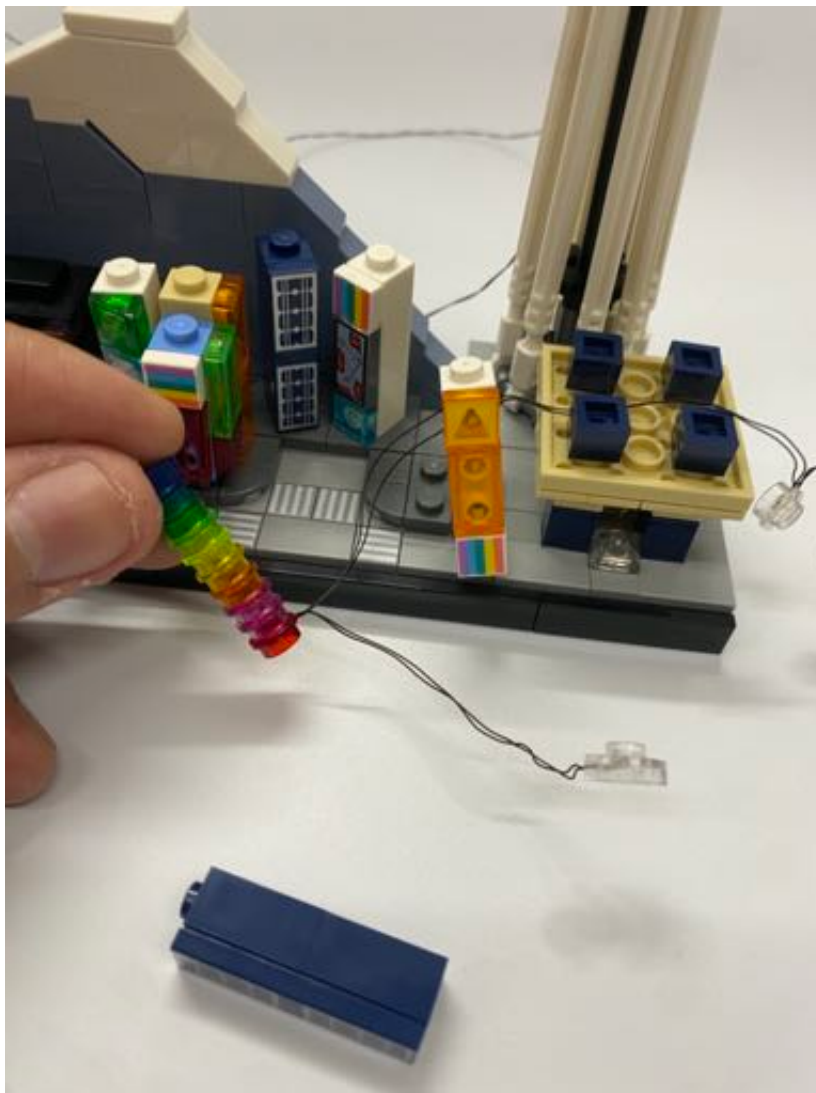

For the other side, replace the 1x2 blue tiles by the lighting tiles

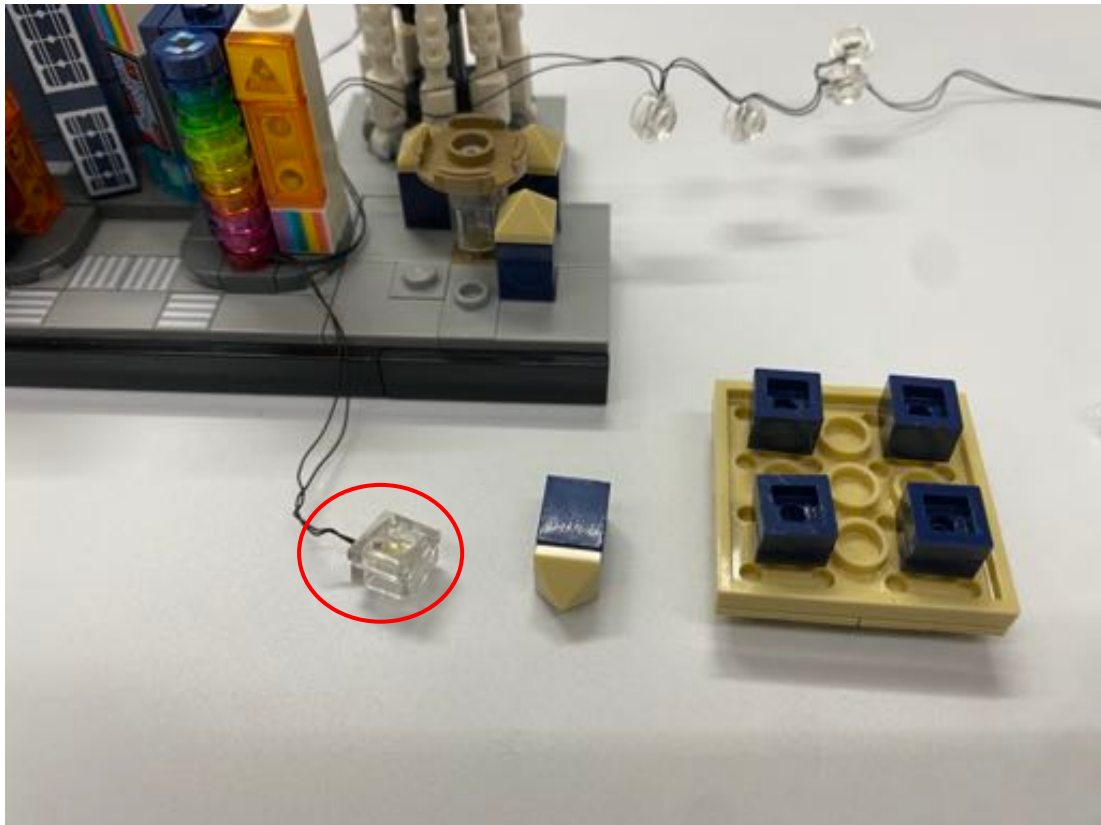

Take the clear parts from the model and put them on the lighting parts

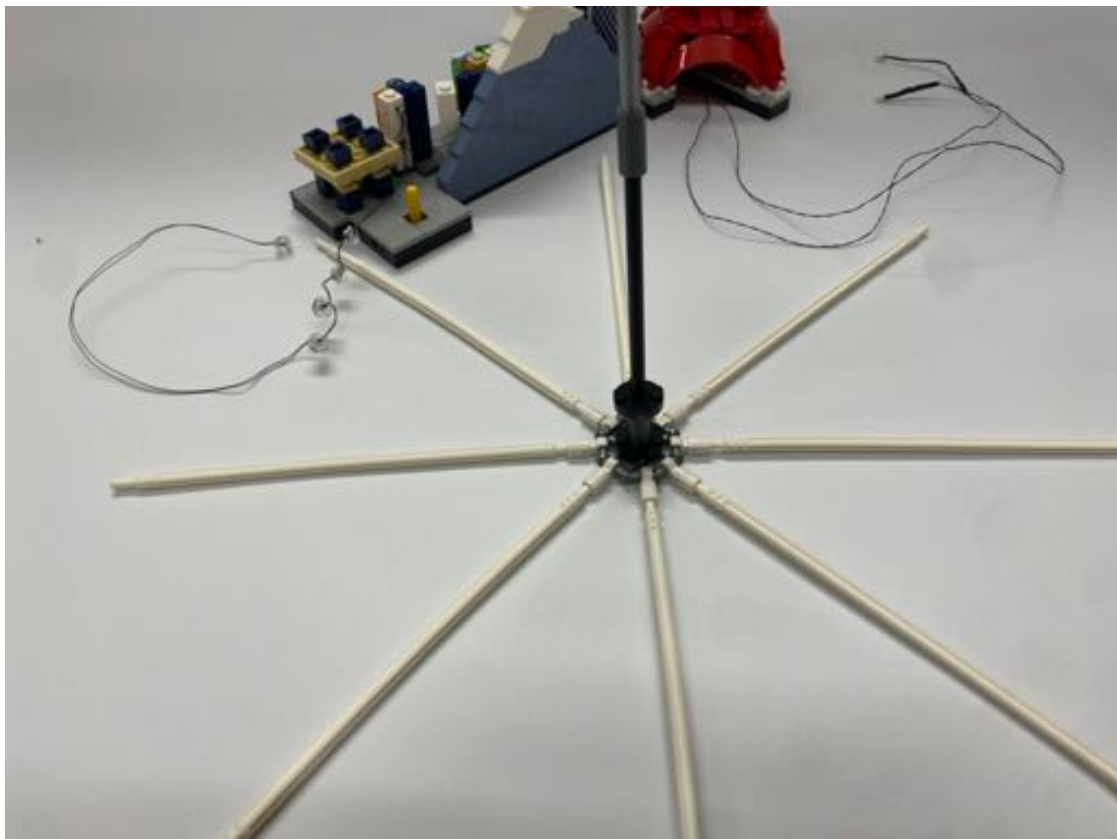

Then do the same thing for the other side

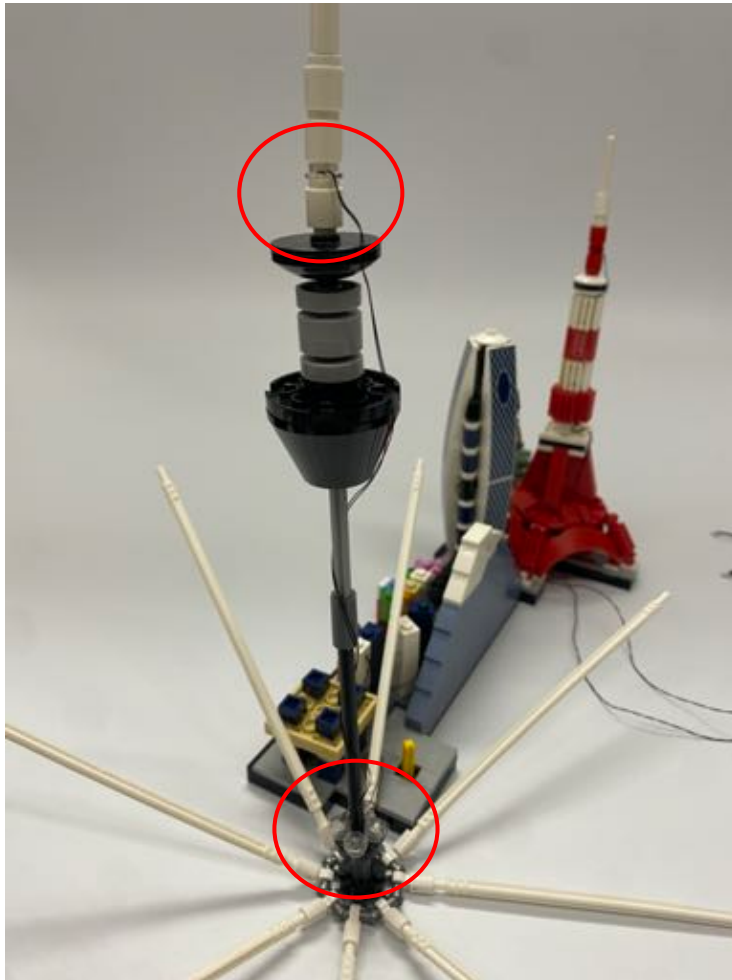

Replace the 1x1 plate by the lighting plate

For the remain lighting round plates, install them to the tower

Install them as shown then restore the tower

Connect with the USB plug then you can light it up
