

# Lego 10290

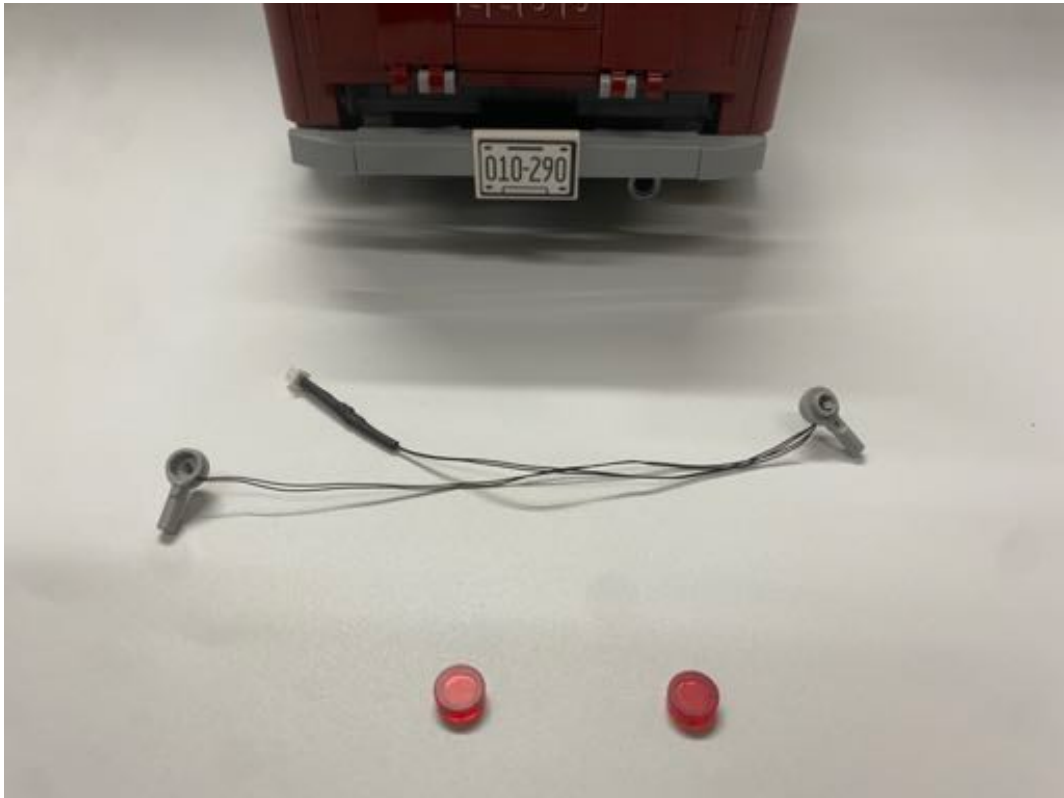

## *Pickup Truck*

### *Installation Guide*

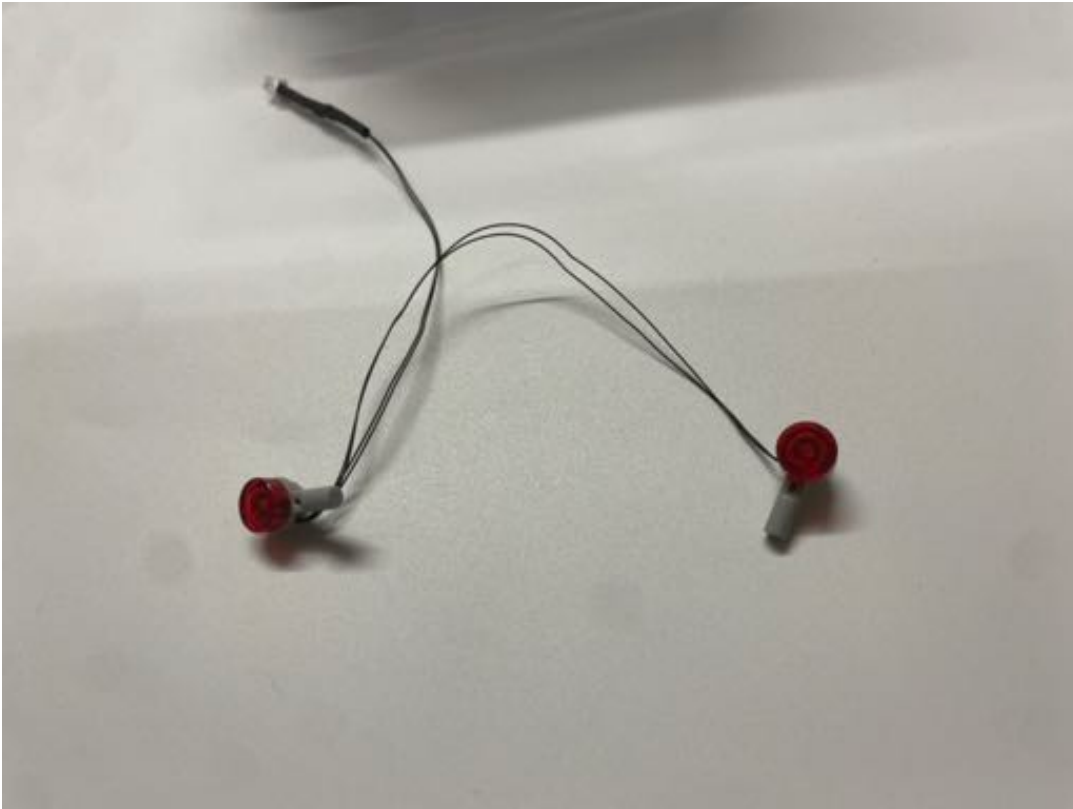

Start from the rear lights, remove the rear lights, detach the red tiles

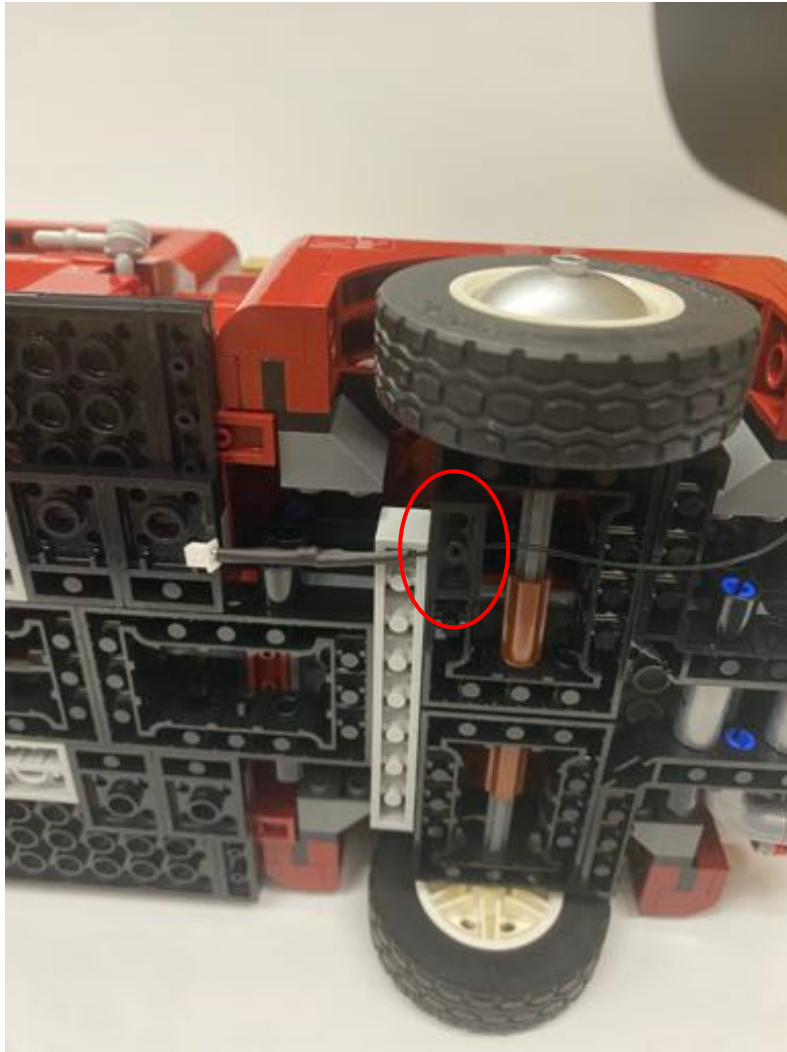

Combine the red tiles with the lighting parts

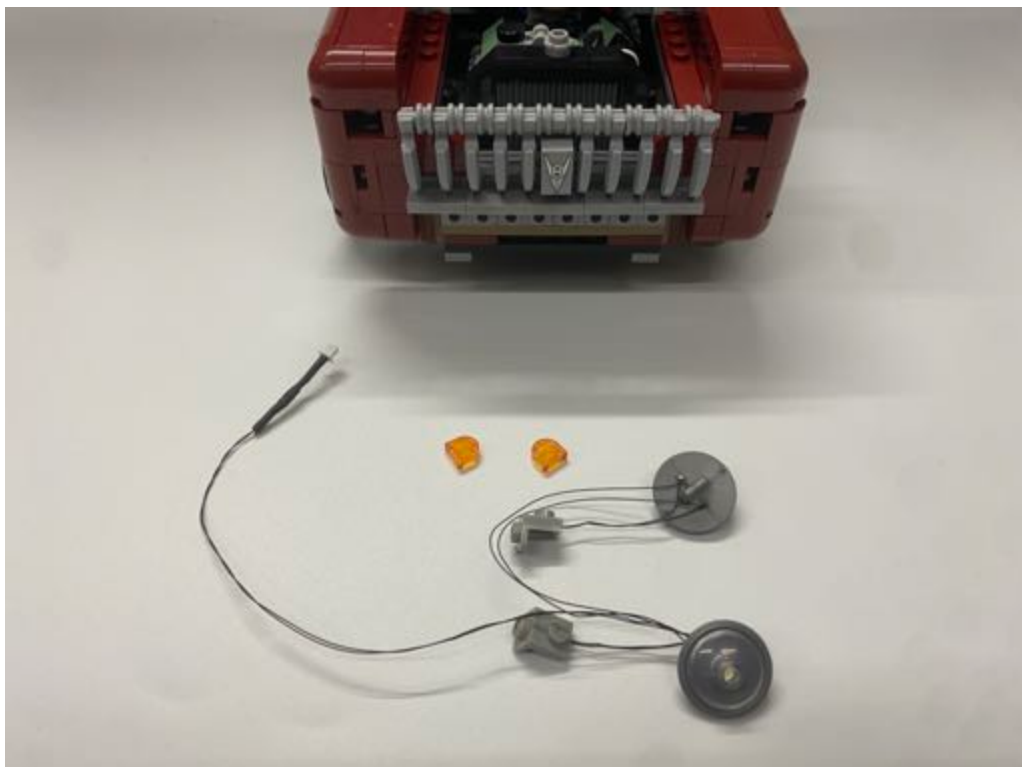

Restore the lights, hide the wires underneath the car

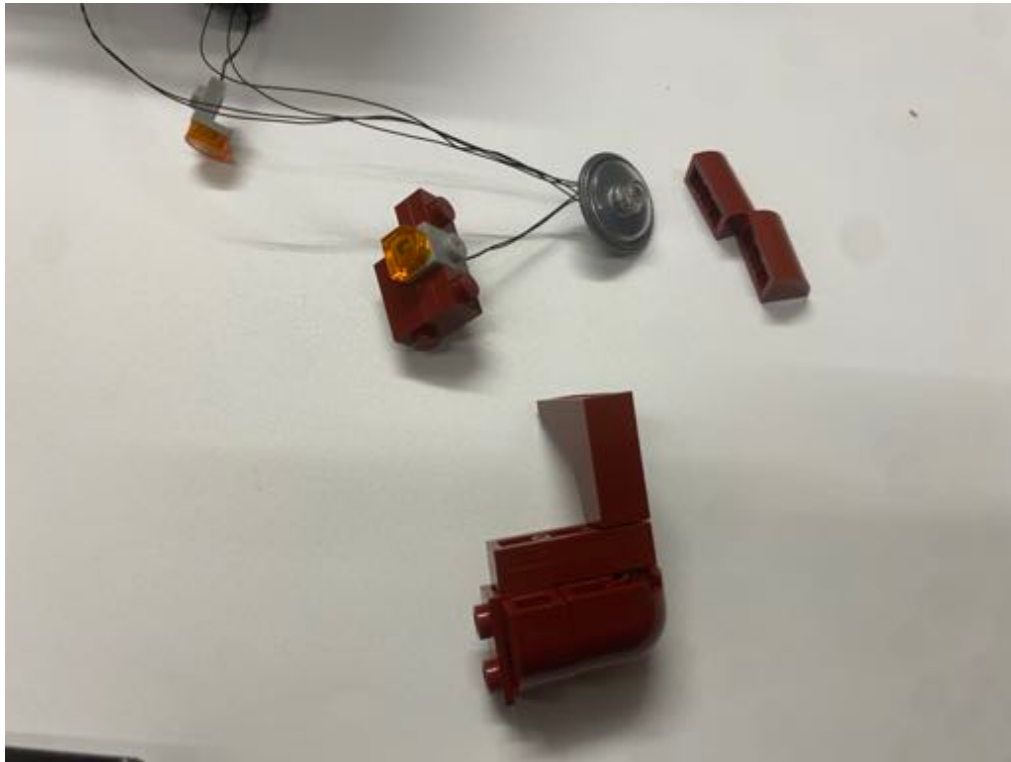

Move the connector to the bottom and stable by the 1x2 plates provided

Then for the front lights, remove the clear orange tiles to combine with the lights

Restore the orange light on any side first

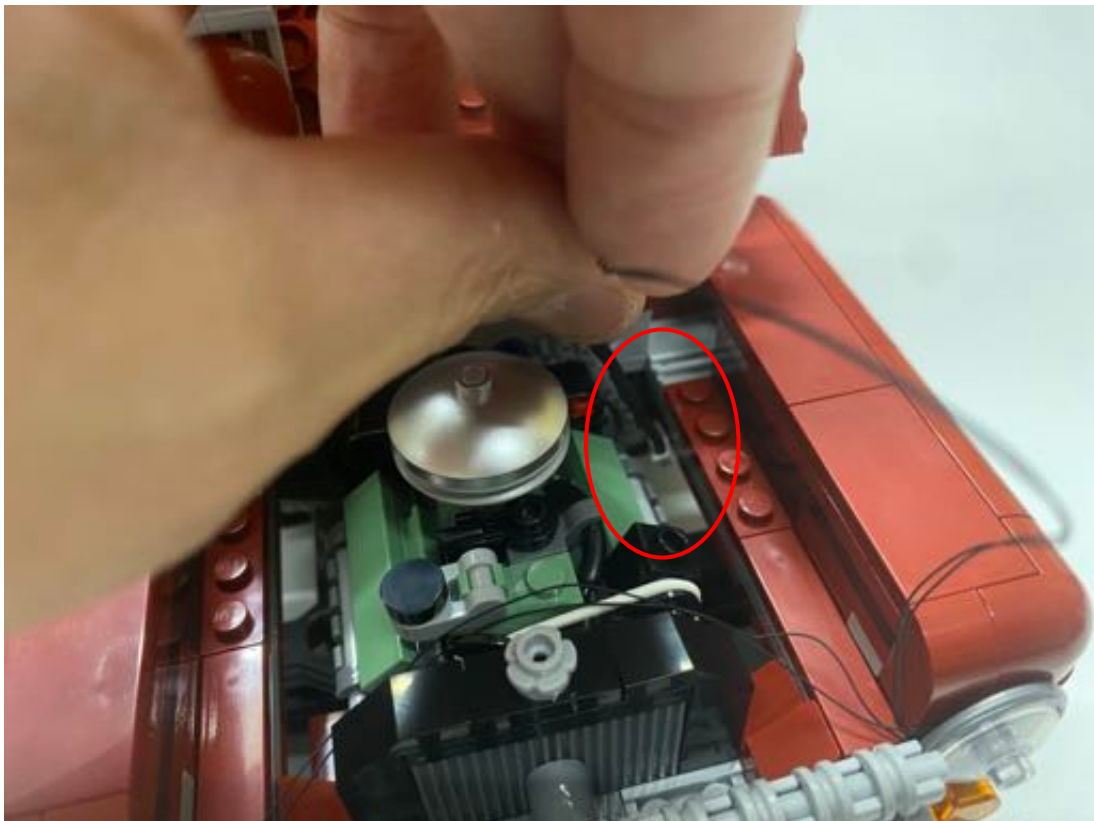

Restore one side of the front light and move the remain lights to other side by passing through the engine area

Then restore the other light

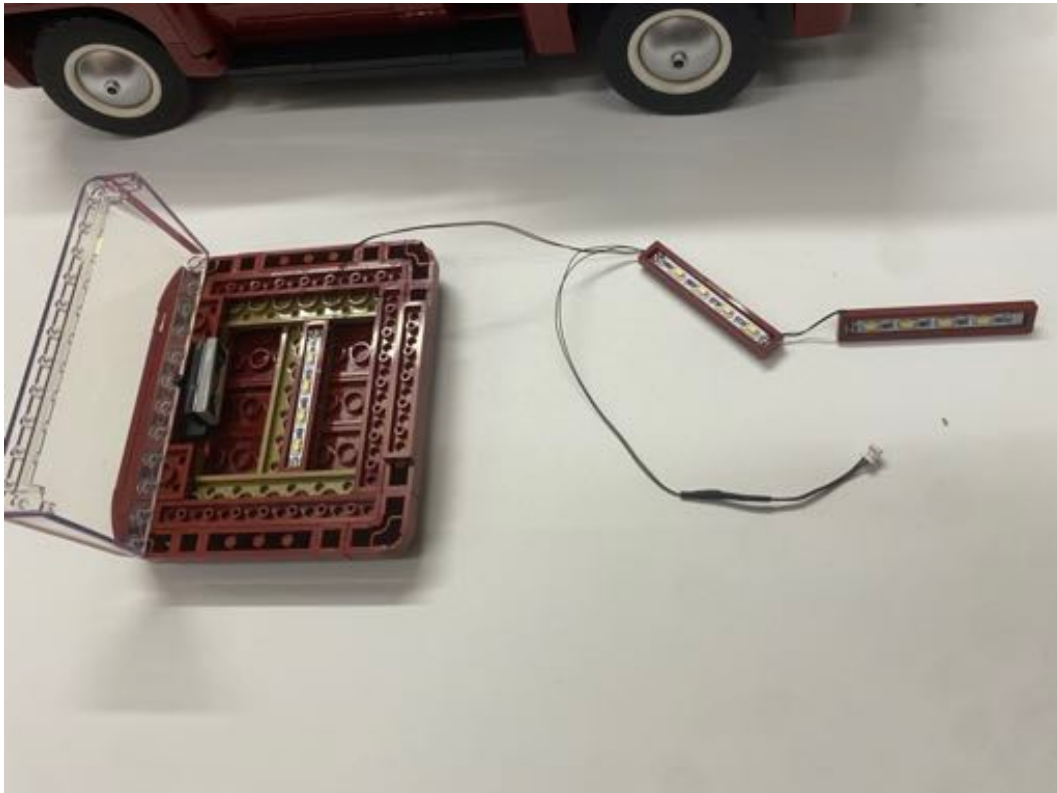

Pass the connector to the bottom of the car by the hole shown

At last assemble the remain lights

Remove the top, assemble the lighting plate with the longest wire

Put the top back, pass the remain lights to the back and assemble as shown

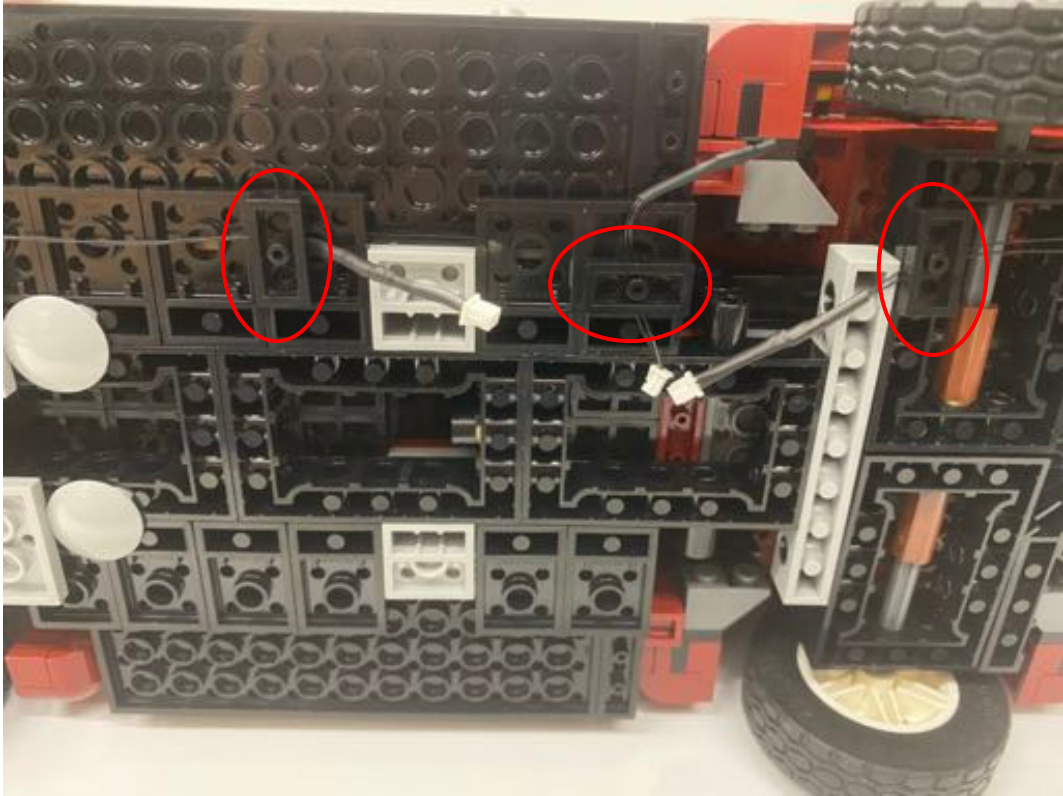

Pass the connector to the bottom through the shown gap

Stable the connectors by the 1x2 plates provided

Now you can choose to power by USB or battery.

If powered by battery, connect to the battery case and stick it underneath the vehicle

If powered by USB, connect the connectors to the USB cable
