

# Lego 76240

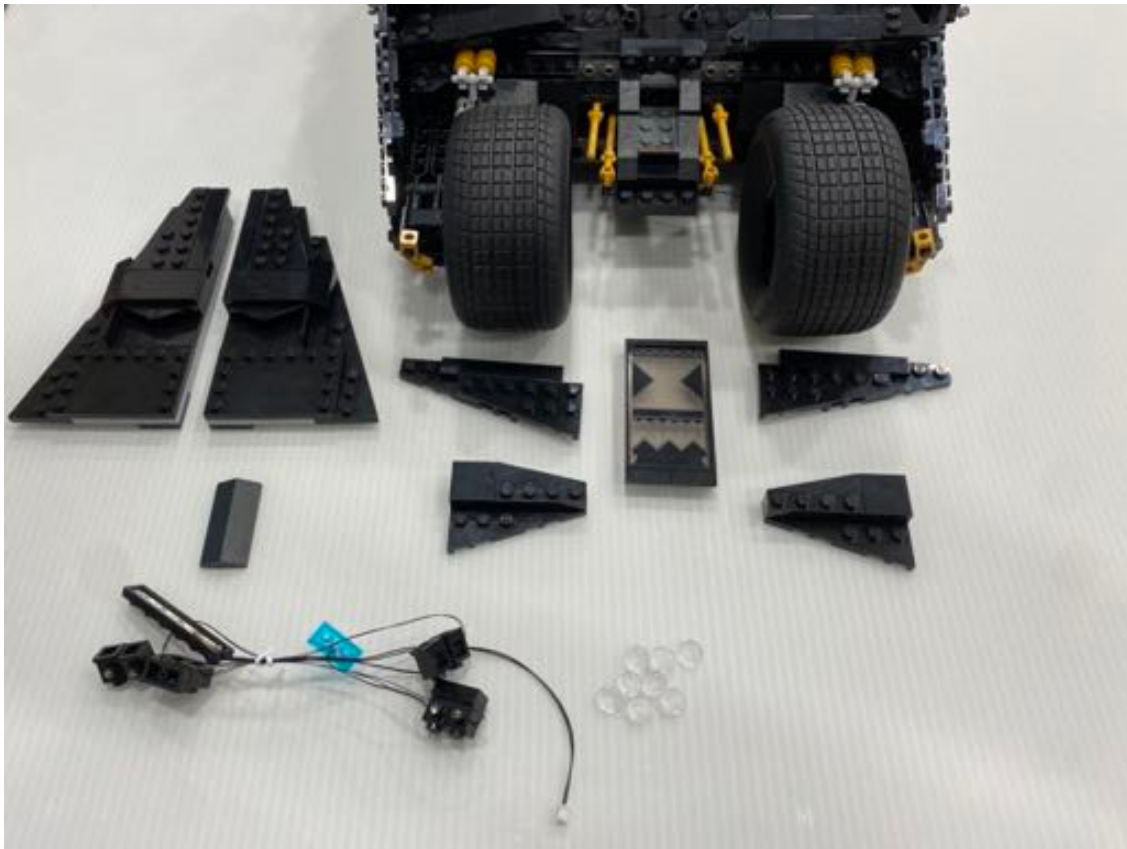

## **Batmobile Tumbler** *Installation Guide*

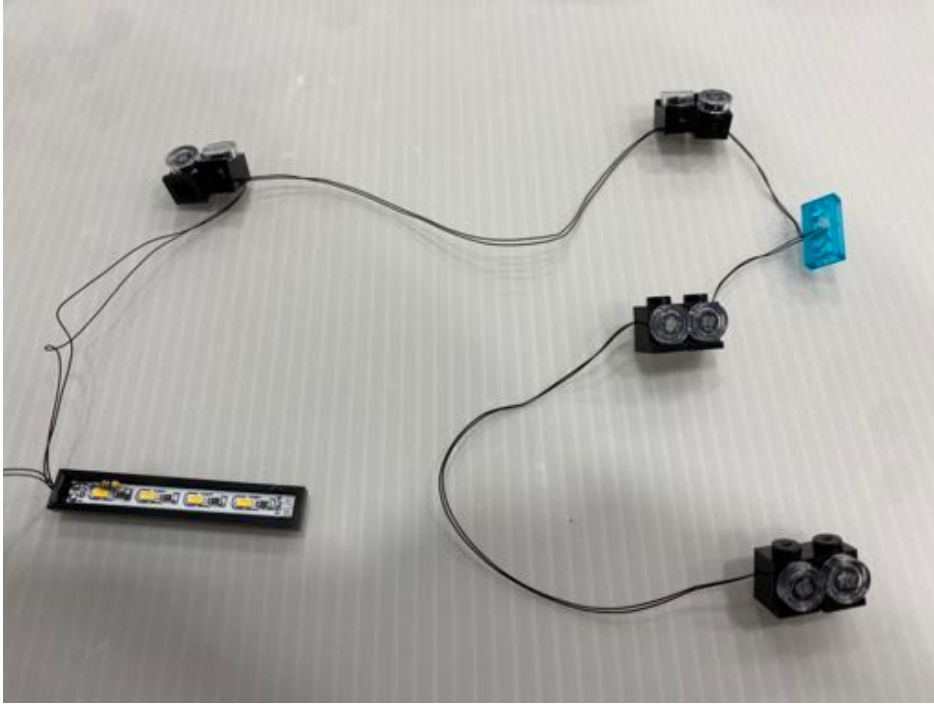

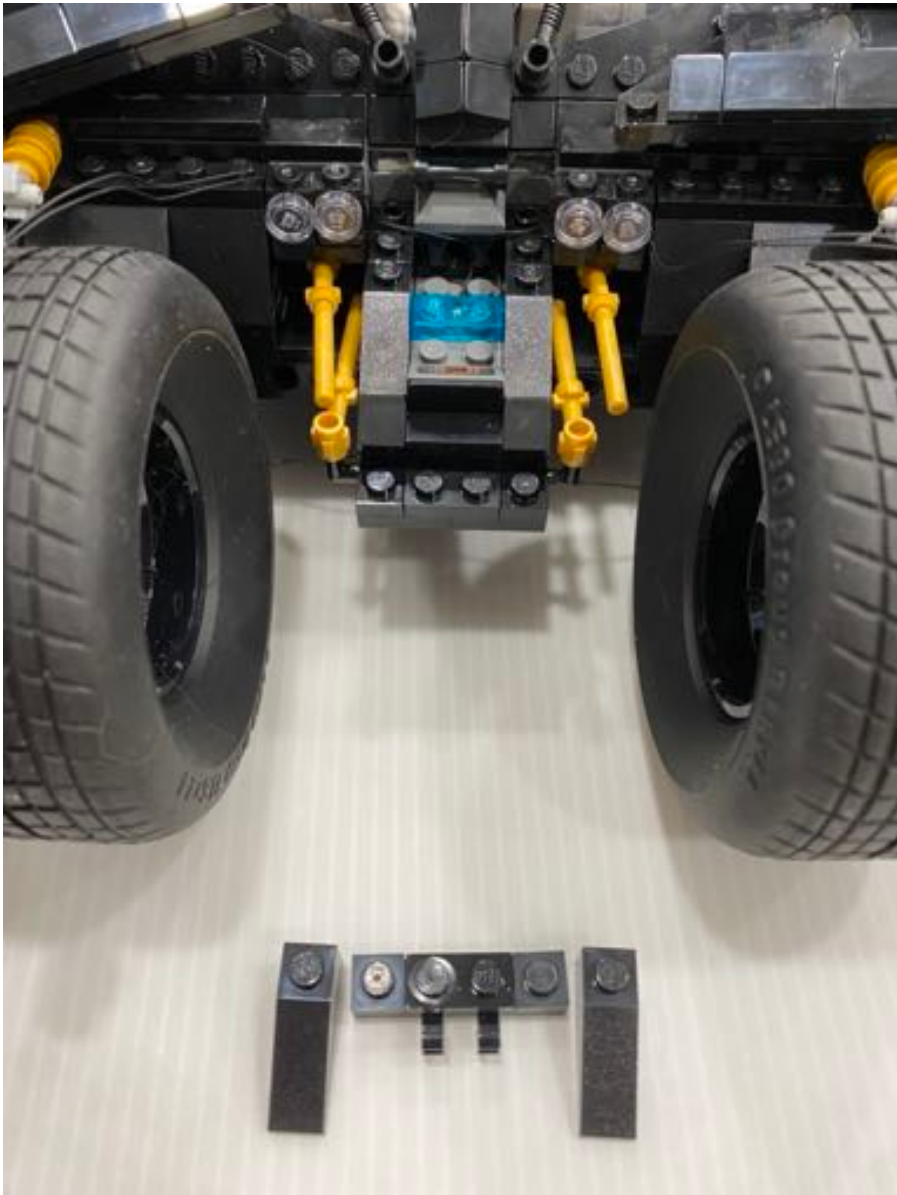

Firstly, detach all the shown parts, take all the clear round tiles off from the black bricks

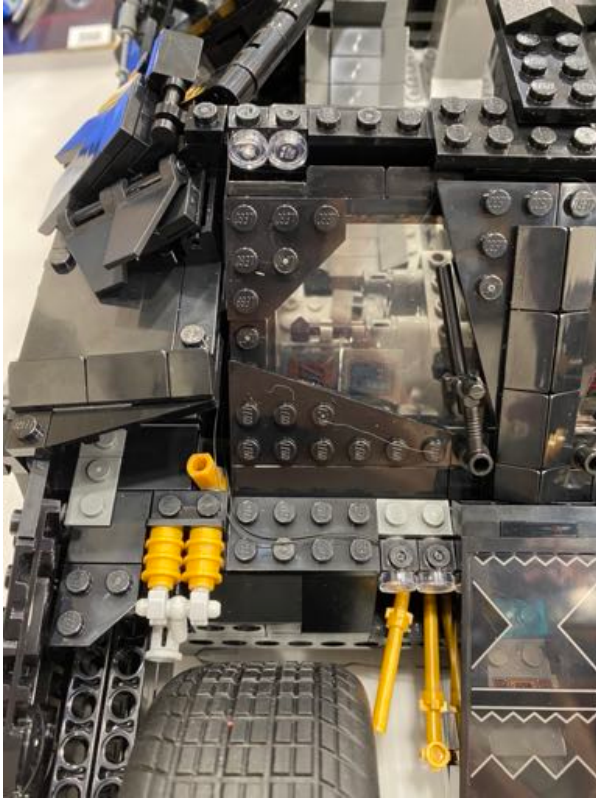

Assemble the clear round tiles to the lighting bricks

Take off the parts shown, assemble the lights and the blue 1x2 lighting plate

To move the remain lights to the top, clean the path by removing some parts

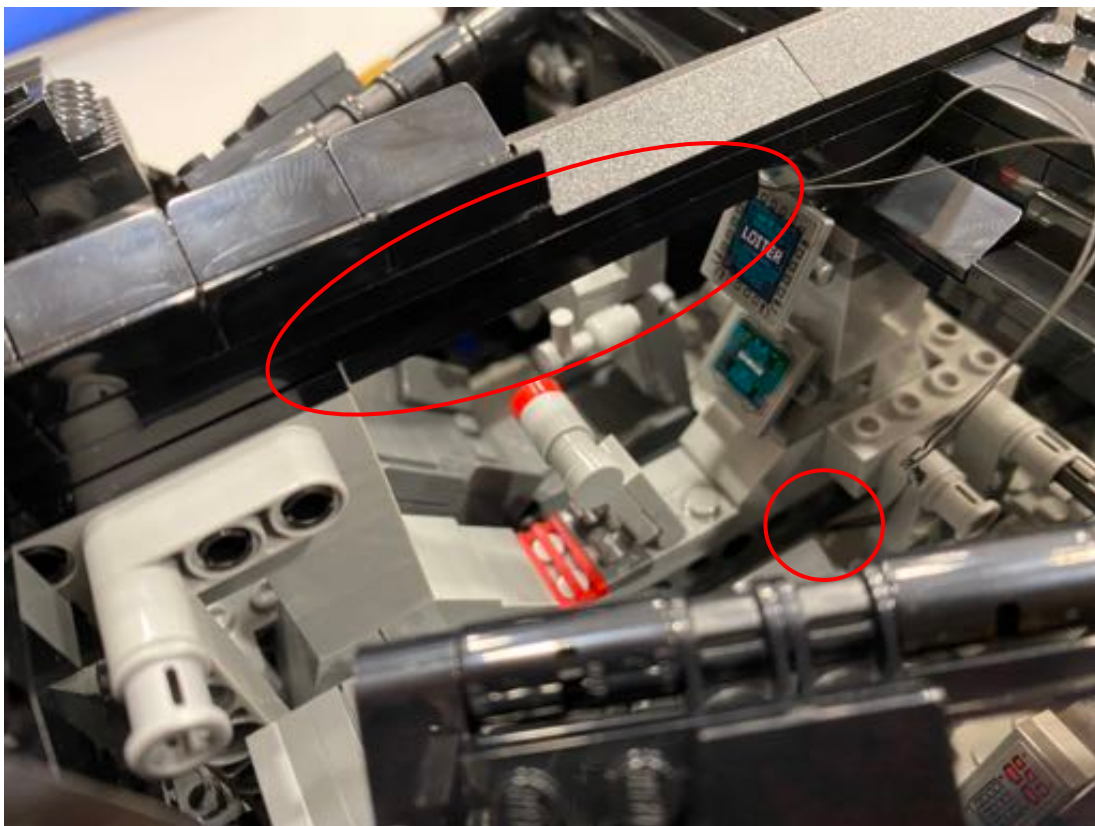

Then do the same thing for the other side

Restore the removed parts after the lights are setup

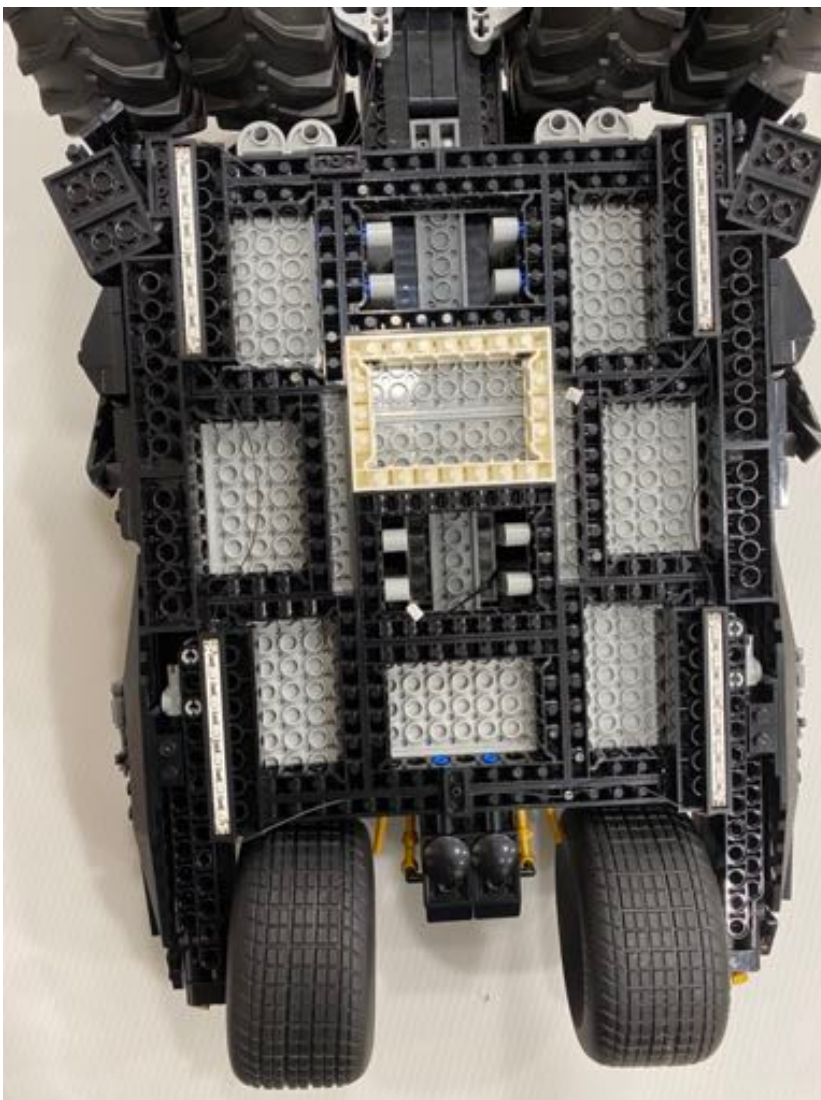

For the lighting black plate, assemble it as shown, then pull the connector through to the bottom of the car

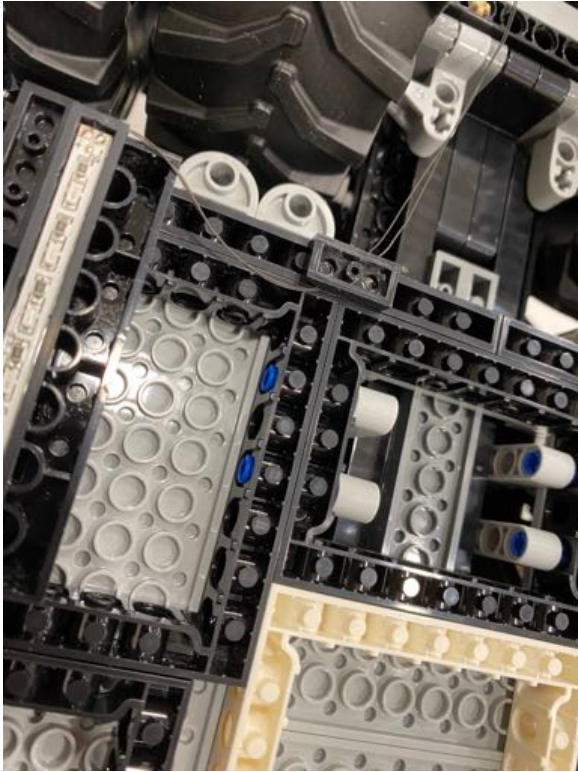

Now for the other lighting parts

Assemble the lighting plates underneath the car  
Make sure direction that the remain lights will be moved to the rear side

The wires can be stabled by the plates provided

Move the remain lights to the rear, detach the shown parts

Replace the lighting part to one of the 2x2 round plates

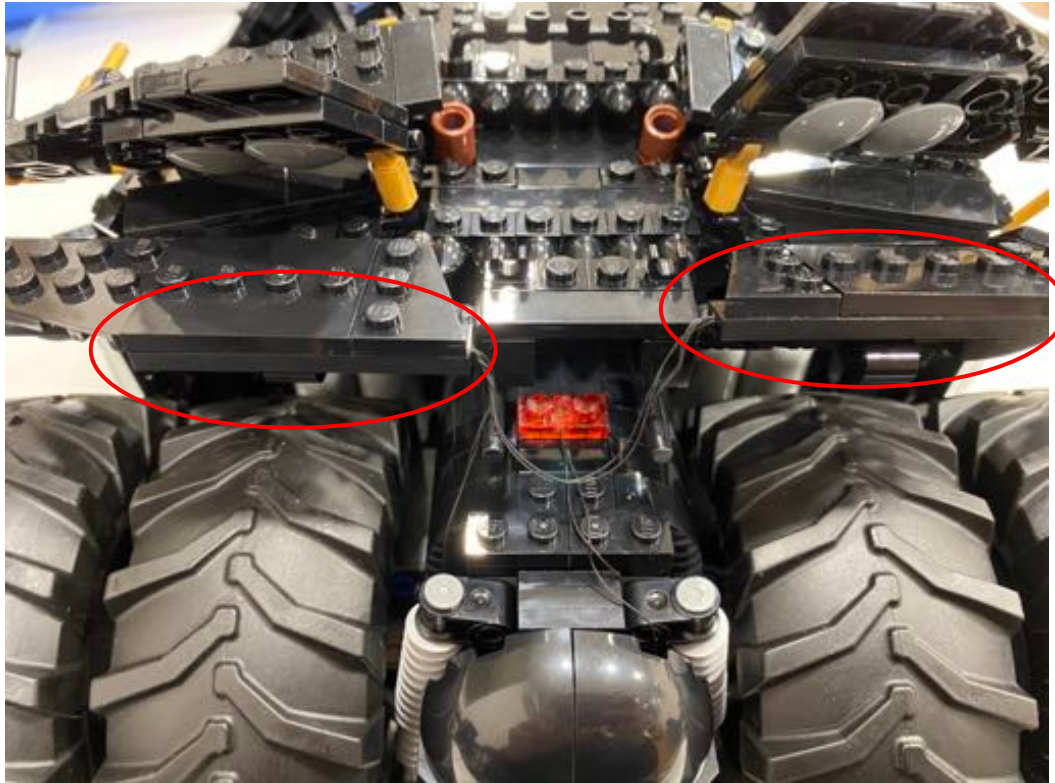

Restore the shown parts, place the wires at the shown area so that it can be covered by the bricks

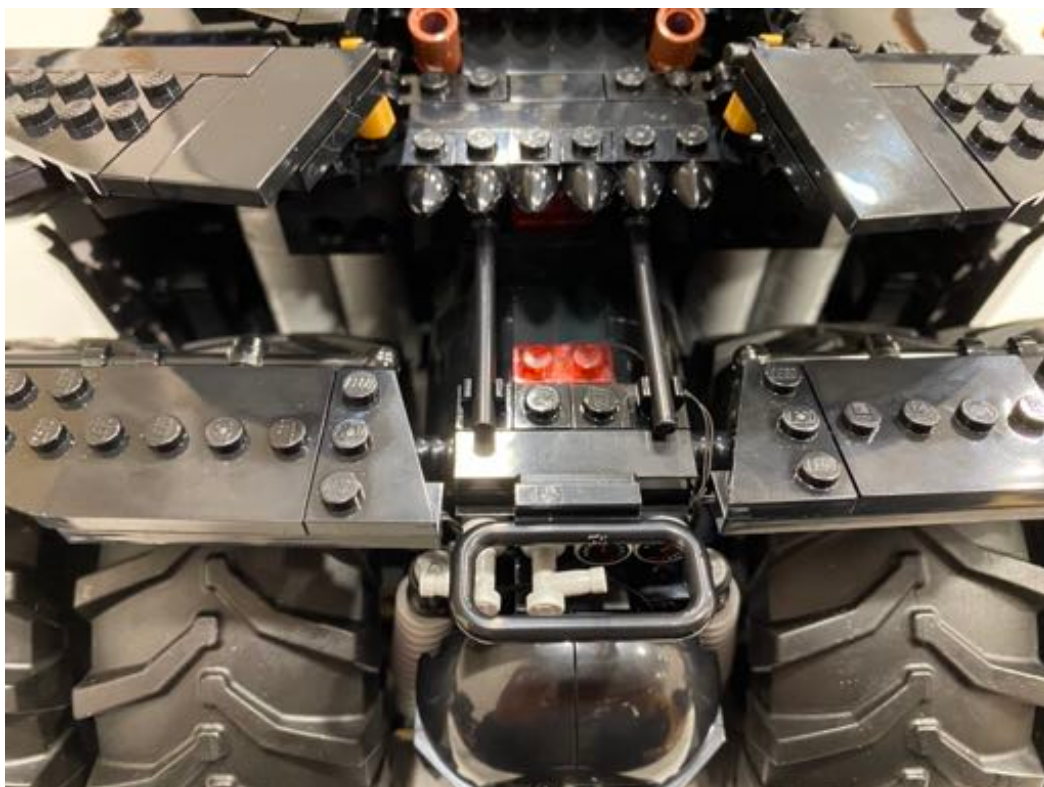

Assemble the lighting plates followed by the pic

Restore the rear after the lights are settled

Now you can connect the power source by USB cable or the battery case  
The battery case can be plugged underneath the car as shown
