

# Lego 21058

## *Great Pyramid of Giza* *Installation Guide*

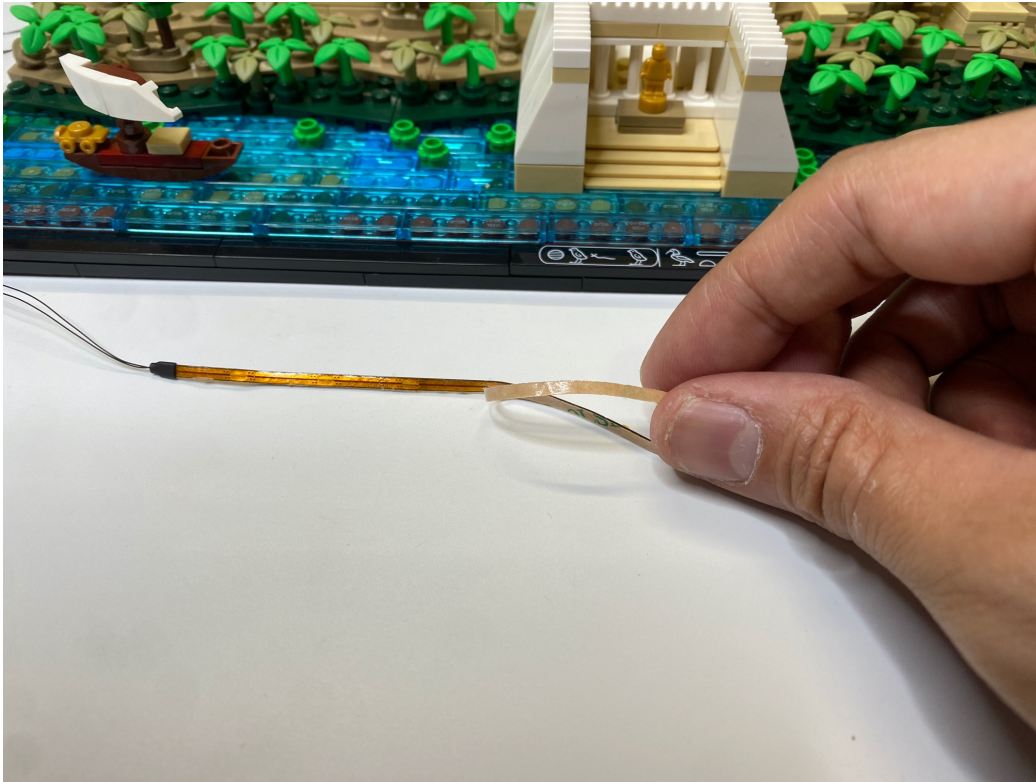

The 2 sets of lighting parts will be assembled on 2 sides of the Pyramid  
And start by the left side first

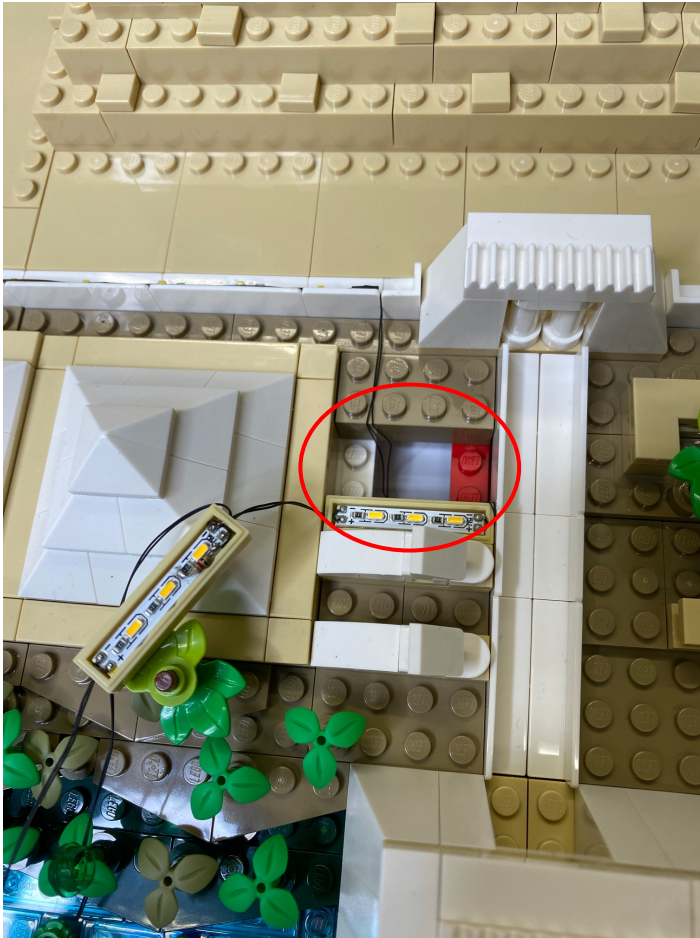

Start from peeling off the tape of the led strip

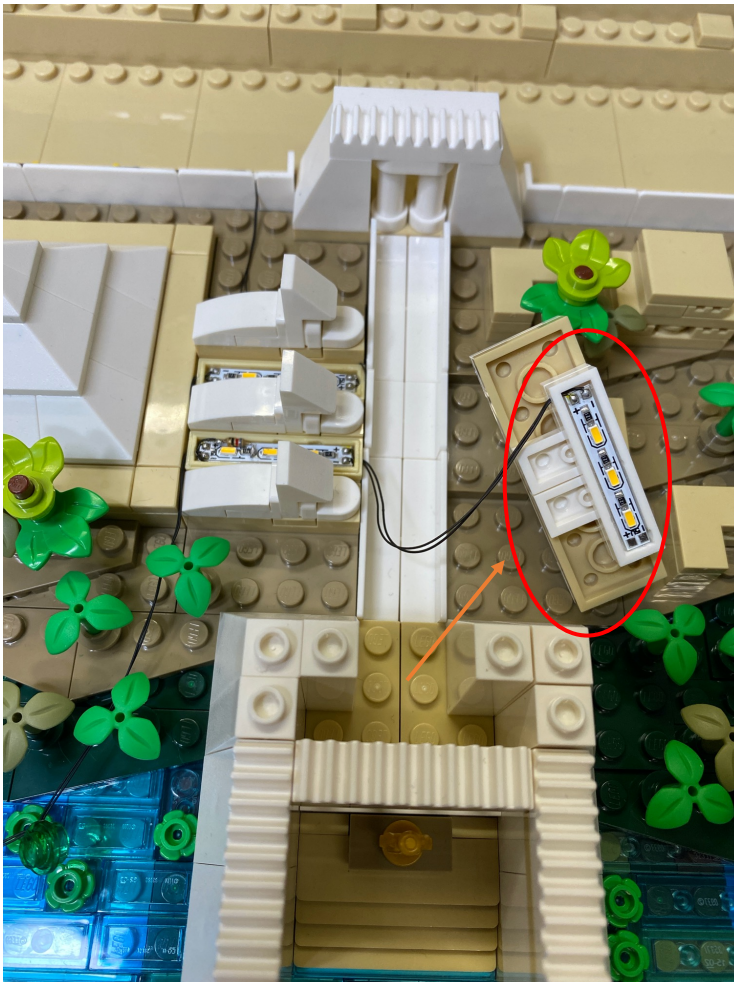

Stick the led strip on the side as shown, the connector should face the back side

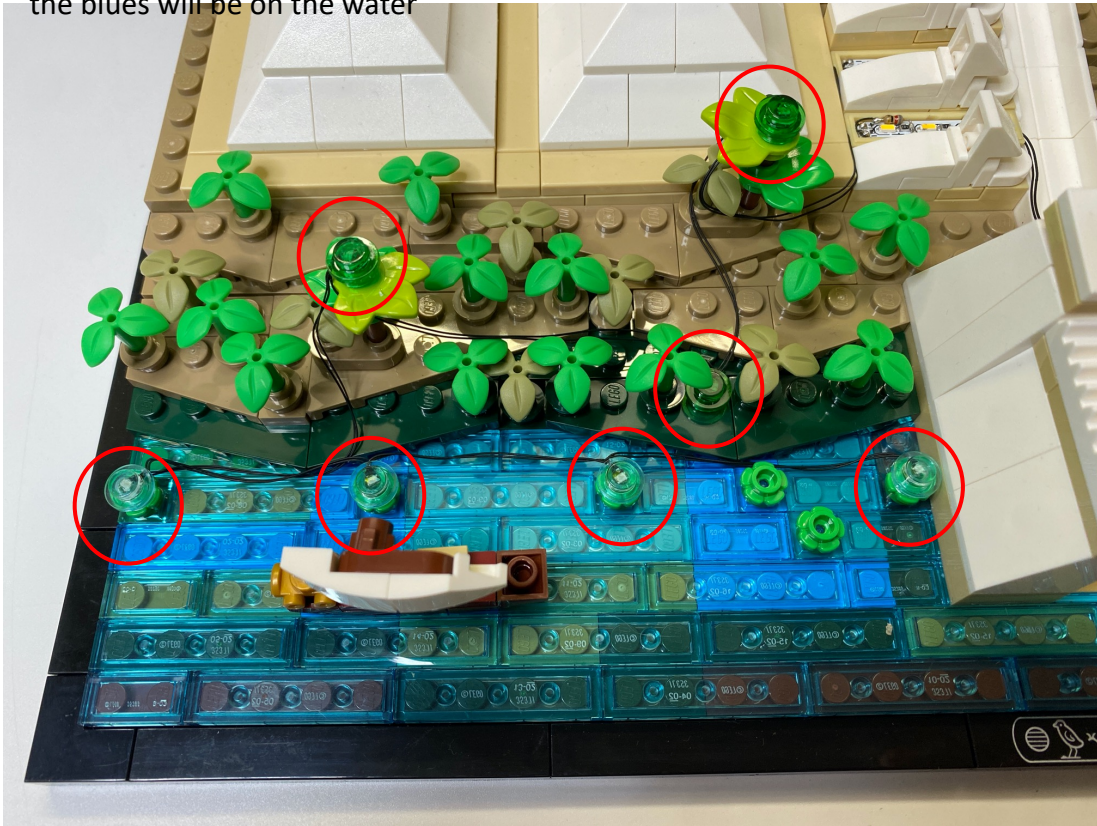

Assemble the tan lighting parts in between the Sphinxes of Giza and hide the excess wires under the block

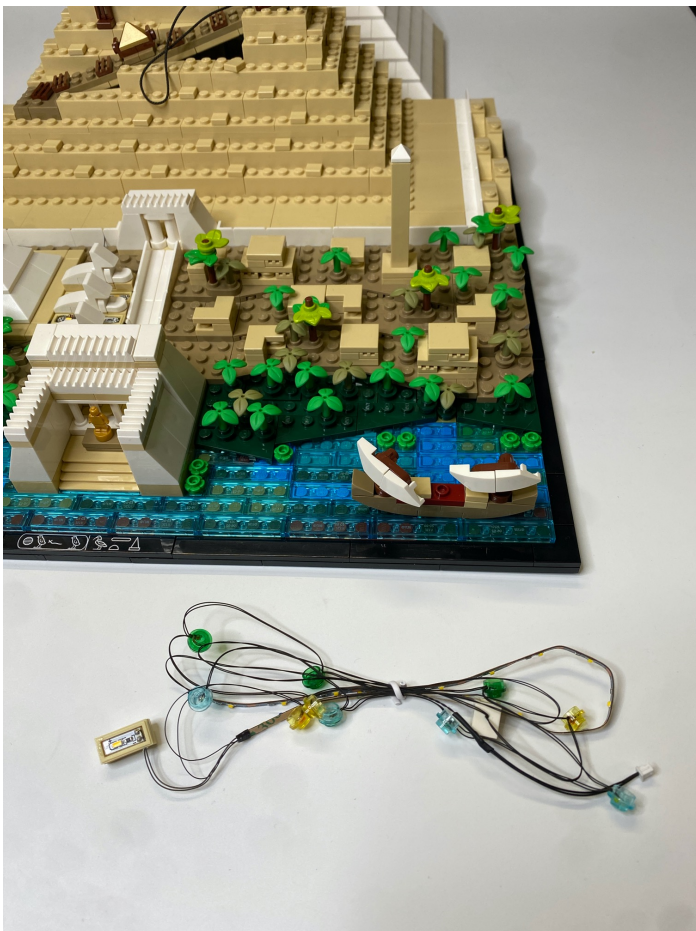

The 1x4 lighting plate will be assembled at the entrance

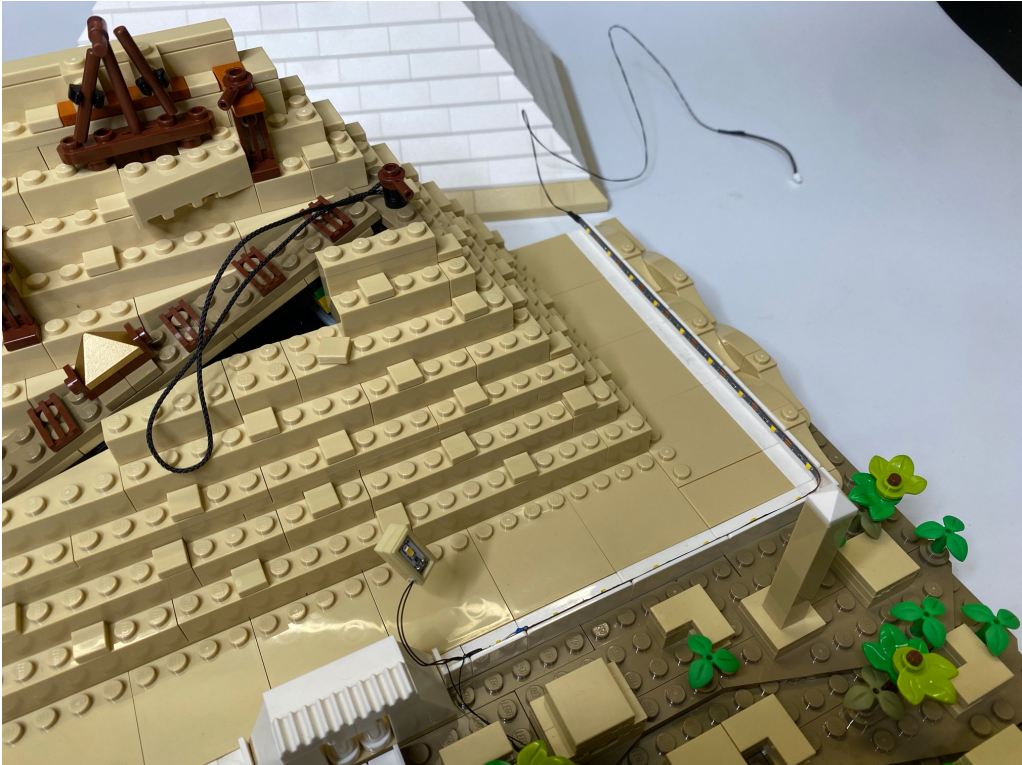

For the remain lighting round plates, the greens would be assembled on the trees, the blues will be on the water

Now it's turn for the other side

Start from stick the led strip, same as the previous side  
The tan lighting part would be stay inside the pyramid area and move the rest out

Replace the tan round plates and the white brick in the red circles by the lighting parts

Assemble the remain lighting round plates, similar to the other side

Put the pyramid back and assemble the tan lighting part on the entrance

Double check the whole model do the wires placed properly

At last connect with the USB cable and it's done
