

Lego 76403

Harry Potter

The Ministry of Magic *Installation Guide*

Start by the side parts, take the lighting dishes to replace the dishes of the poles

Then restore the booth with the wire come out from the back

Take this lighting part for the water fountain
replace the clear round block at the middle

Then connect them to the USB cable

Now take the remain lighting parts to assemble it into the main building
Start by splitting it as shown

Take the lighting parts with green flame for this side of the building

Split the bottom part of the building

Assemble the two connected flames and the gem to replace the original one at the entrance

Then remove the shown parts and assemble the rest two flames on the side
And leave the lighting 1x4 plate at the middle

Then restore the removed parts and stable the 1x4 lighting plate

Combine the building and turn it around, remove the desk and the pink plate
Then assemble the remain lighting plates and restore the parts after

Now for the other side building
Start from detaching the parts as shown

Take the white round blocks away, place the led bulb on the gold part then place the round block back, remember to place the wire in between the studs

Turn the building around, assemble the green lighting gems on both side

Then combine the building and assemble the blue lighting gems, blue flame and lighting plate

Then assemble the remain lights on the top floor

Now this side is done

Now take the remain lighting part for the middle part

Start by assembling the middle lighting plate
Make sure the position of the male female plugs

Then pull the yellow round plate to the top to assemble it to the lamp

To restore the buildings, take out the green slope
pull the lighting plate to the top of the side building
Assemble it and connect the plugs

Then restore the removed part

Now do the same thing for the other side

Restore the building then it's ready to light up
