

# Lego 76407

Harry Potter

## The Shrieking Shack & Whomping Willow

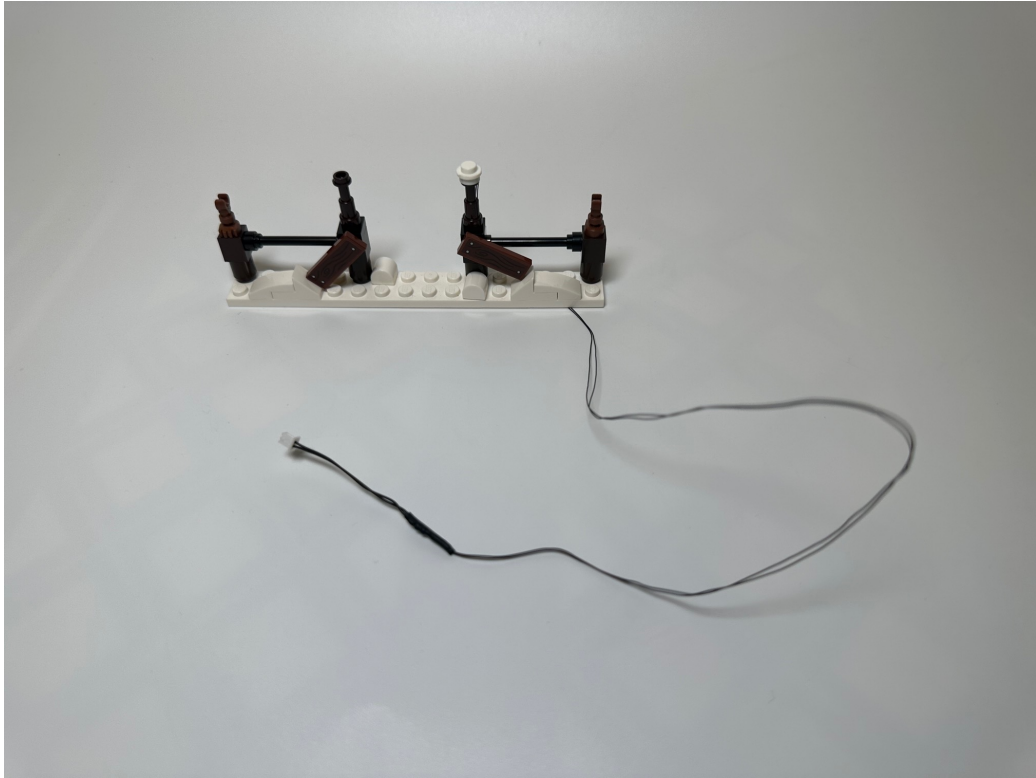

### *Installation Guide*

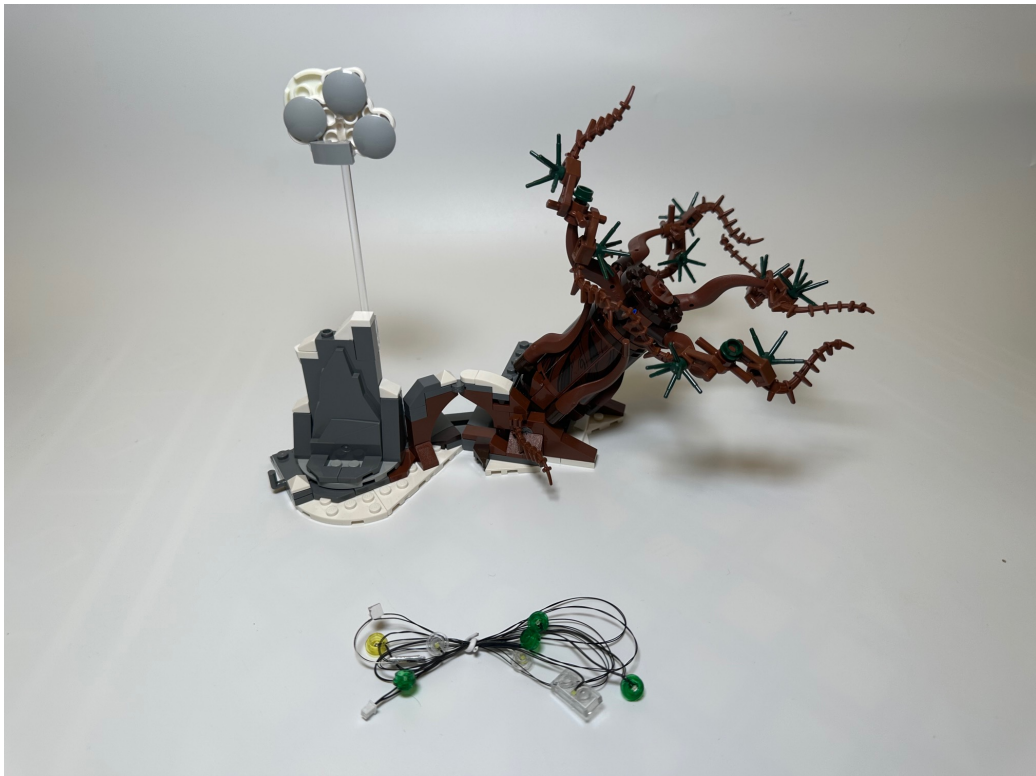

Start by the fence, take the shown lighting part to replace the white round plate on the fence

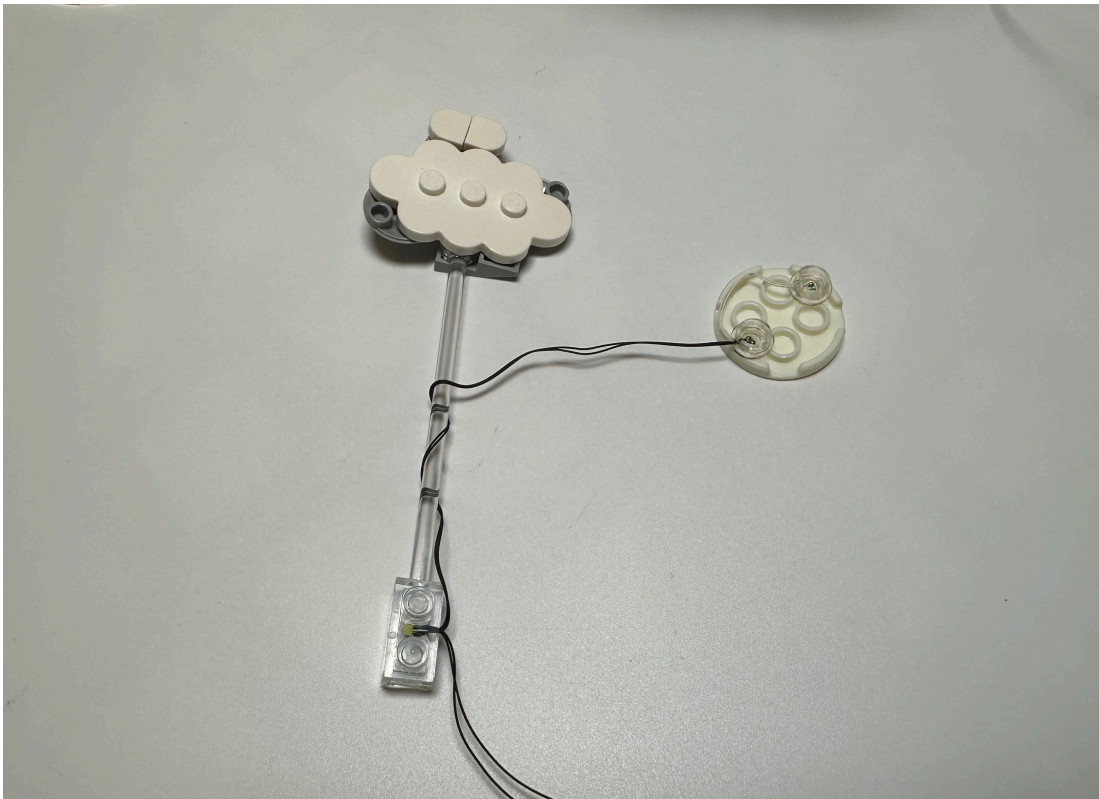

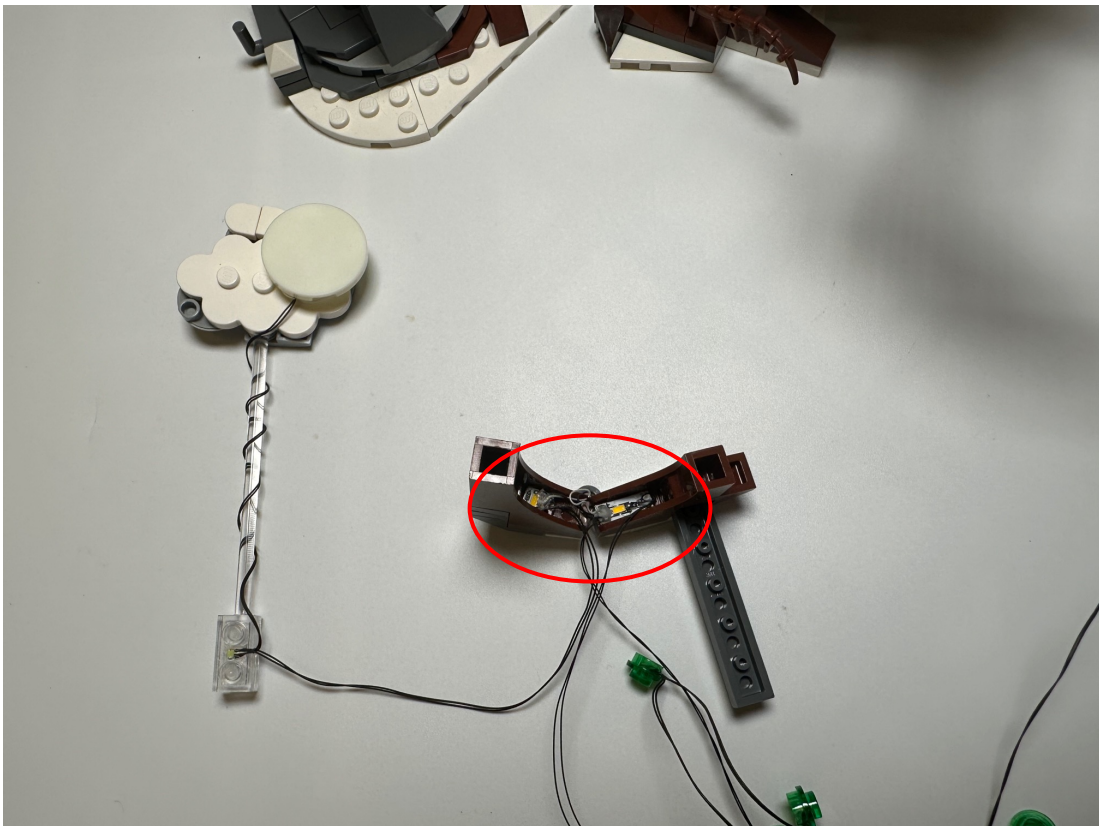

Then take the lighting part with green round plates for the tree

Start from the end with clear round plates, assemble them behind the big white round tile

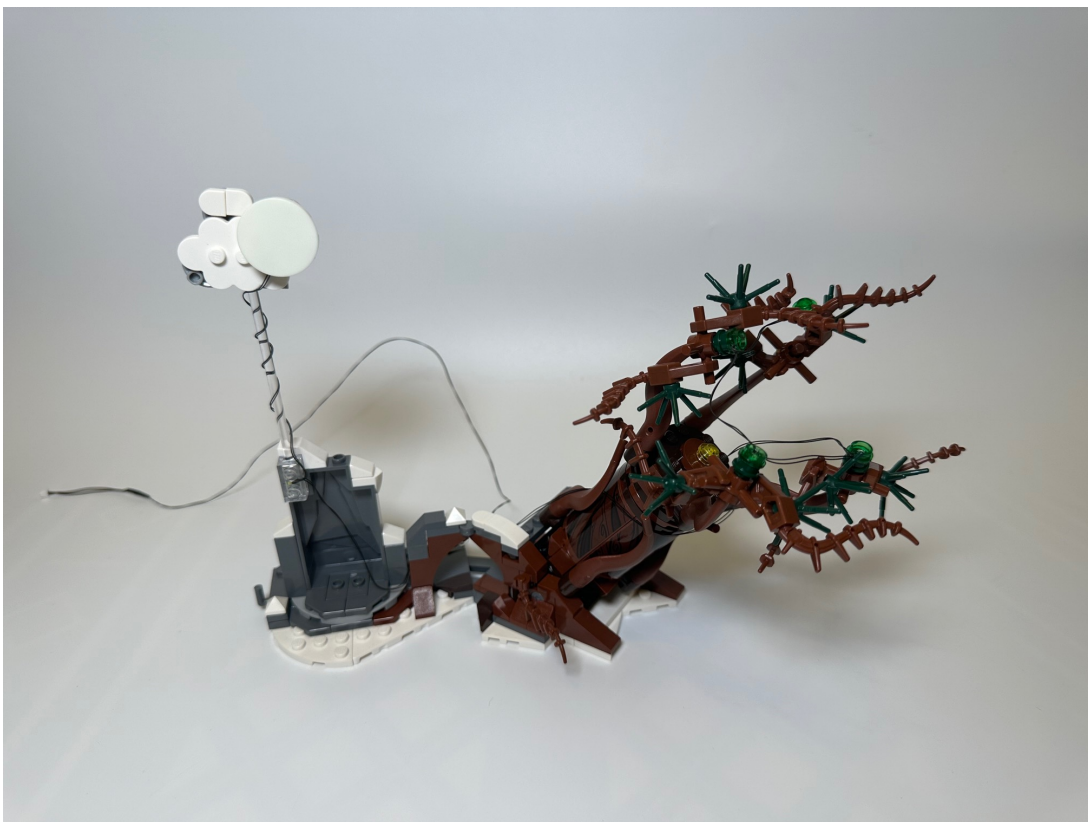

Put the round tile back, then stick the led bars follow by the clear round plates under the brown arches in between the pole and the tree

Put the arches back, then assemble the yellow lighting round plate on the middle of the tree

For the remain green round plates, assemble them on the branches

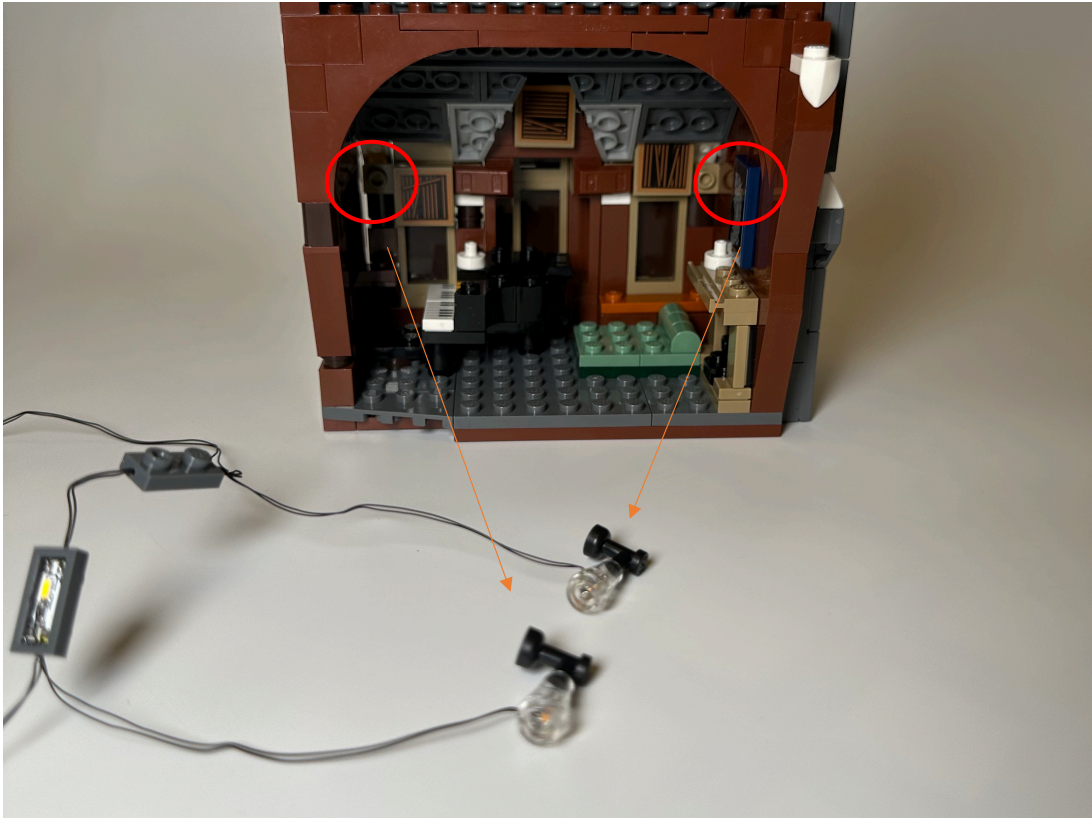

Now assemble the light for the house, split the house first

Now detach the middle window of the 2<sup>nd</sup> floor

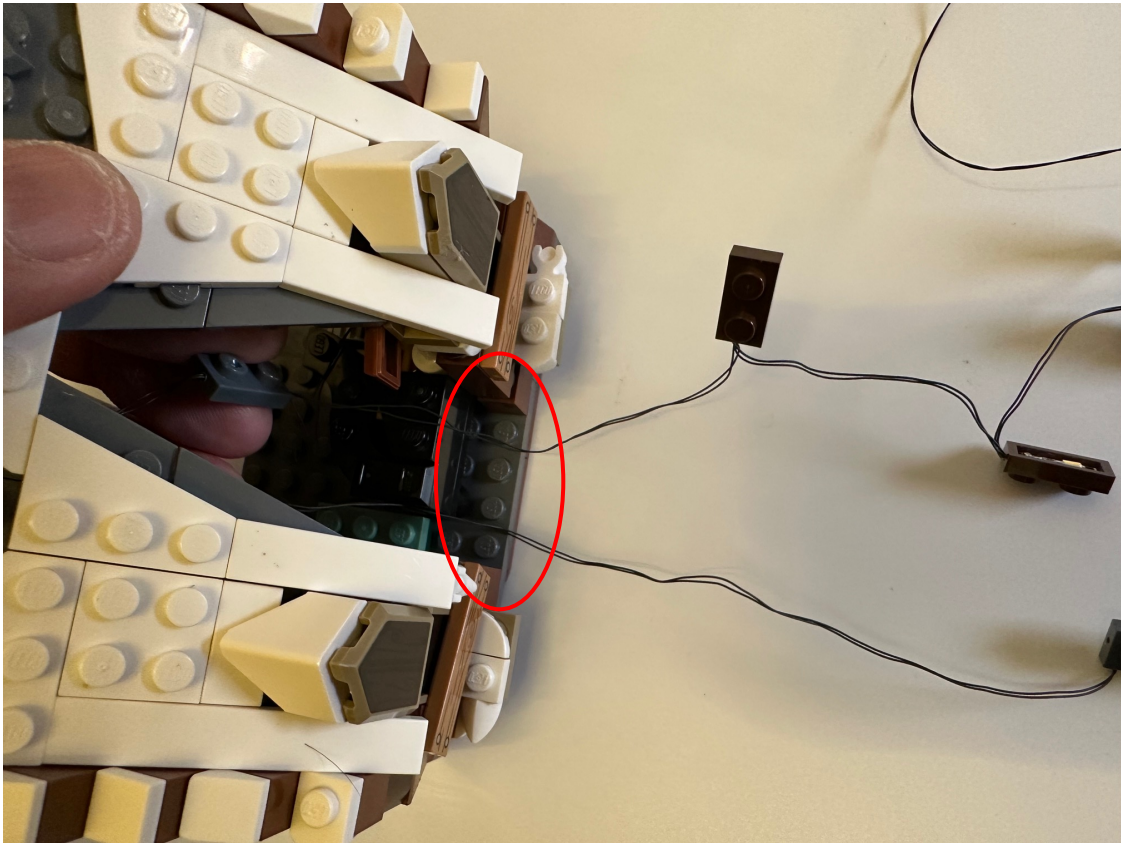

Take 2pcs of the lighting cone, replace them by the lamps inside the house

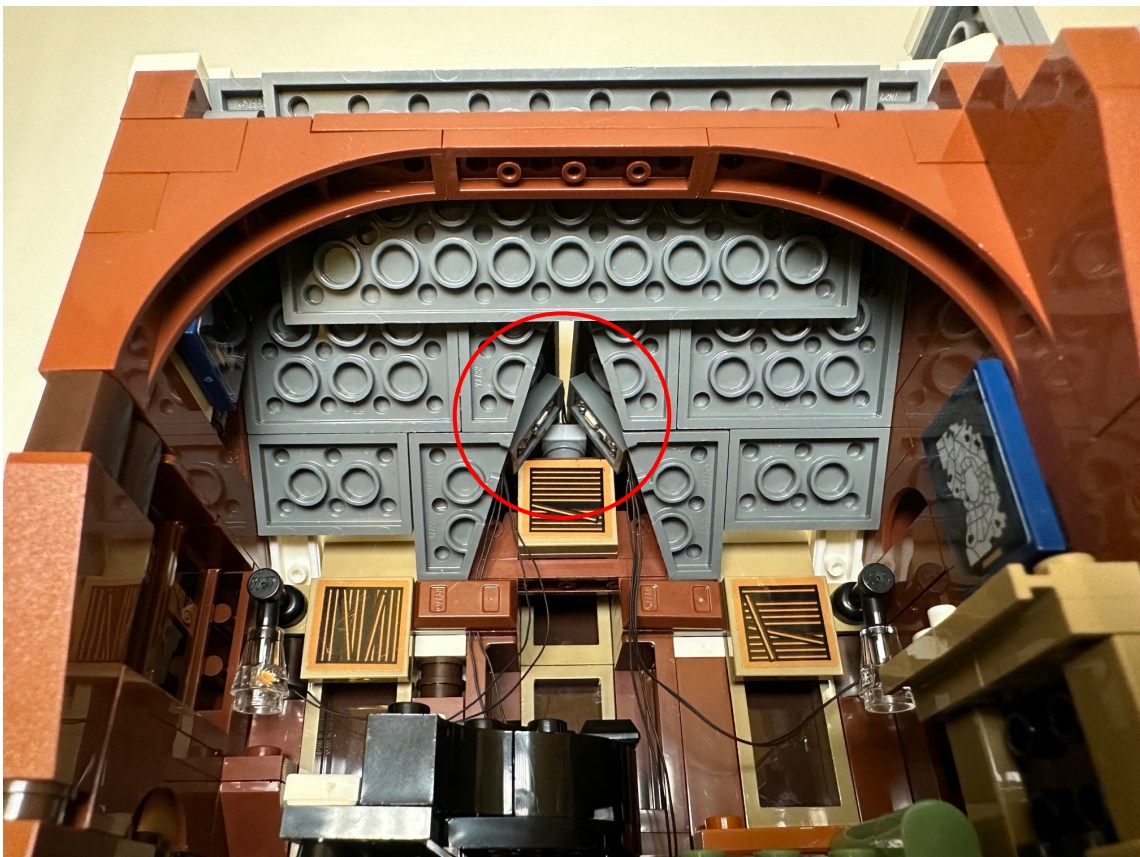

Put the lamps back, and get the grey 1x2 lighting plates inside the house as well

Before putting the detached window back, make sure the wires are placed in between the studs

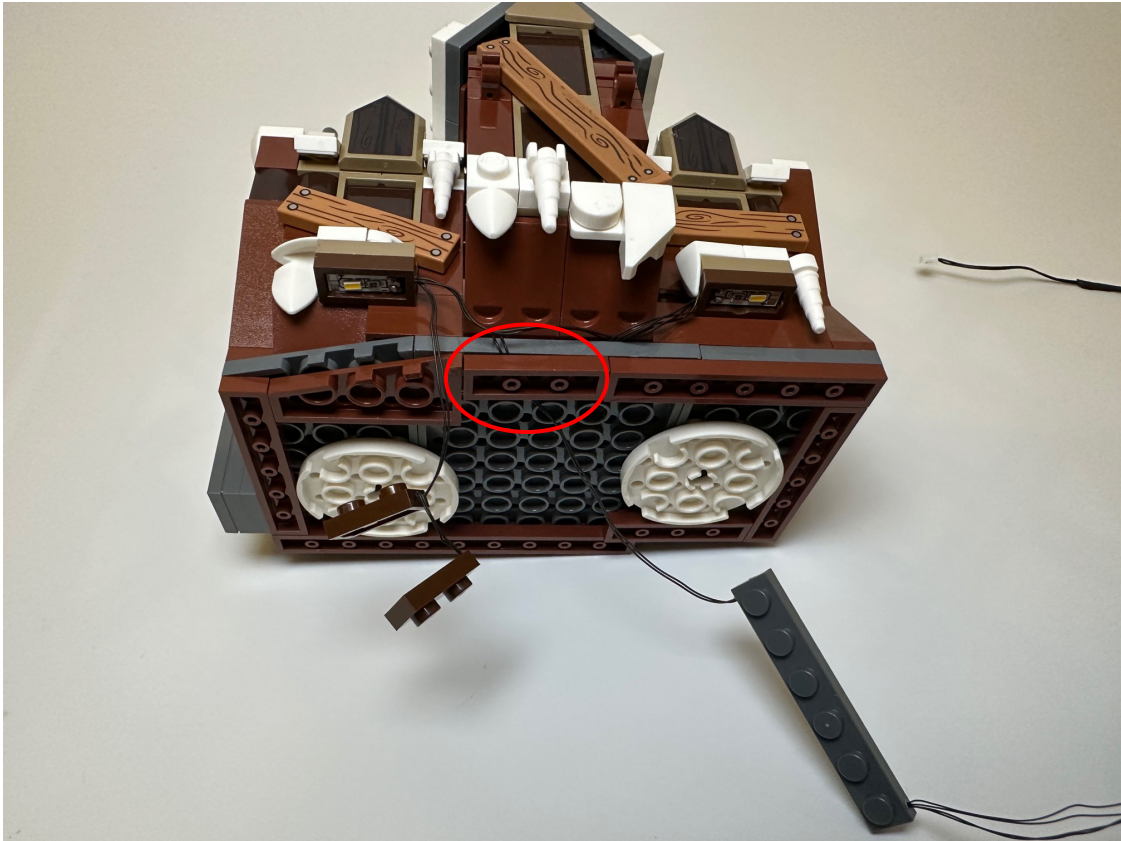

Now assemble the grey 1x2 plates to the middle window that put it back

Now assemble the 2pcs of brown 1x2 lighting plates and stable the wire connecting to the 1x6 by the brown plate at the bottom

Now combine the house, before that place the remain parts through the hole except the brown 1x2 plates

Then assemble the remain 1x2 brown plates at the front door

Assemble the remain lights then it's done

At last, connect all the plugs with the USB cable then you can light them up
