

Lego 21338

A Frame Cabin

Installation Guide

Take the lighting part to assemble with the cabin

Start by detaching the cabin

Get the end of the lighting part with the connector, assemble the lights shown in red circles and the tan lighting plate

For the lighting round plate connect to the round brick, assemble it besides the front door, remove the shown tan tiles to clear the space to hide the wires

Restore the tiles after the round plate is installed
Then stable the wire connecting with the plug at the corner as shown

Now move the lights to the other side by the stairs, remove the shown tiles to stabilize the wires, then assemble the tan lighting plate

Assemble the lighting round brick and the lighting round plate to the lamp

Give the lighting lantern and the lighting round plate out of the cabin by the window, then assemble them as shown

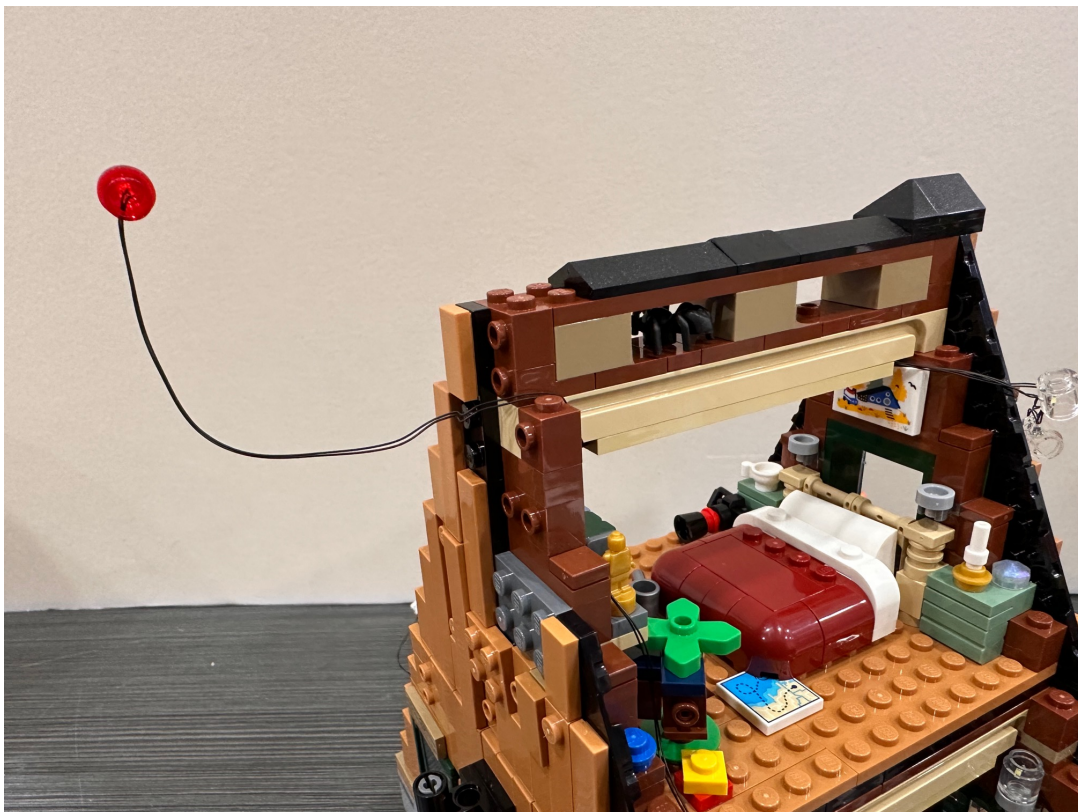

For the yellow lighting round plate, move it to the back and assemble it to the lamp

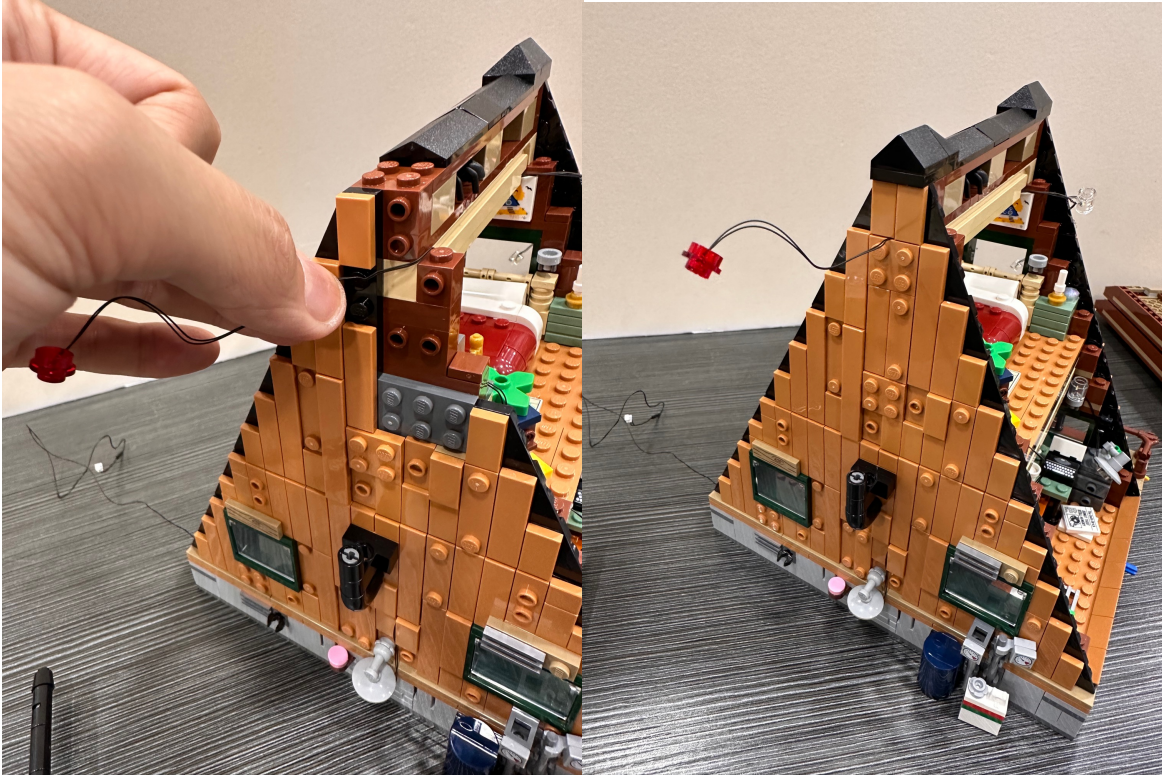

Now put the 2nd floor back, move the lights to upstairs and assemble the lighting tan plate first

Then move the red lighting round plate out, remove the shown parts to clear the space for getting through

Move the wire to the shown place, then restore the removed tiles

Put the pipe back and assemble the lighting round plate

Assemble two lighting round brick, candle light and the lighting round plate as shown

The wire can be hidden behind the drawing

The installation of the cabin light is now done

Next, take the lighting round plates for the trees

The lights are basically assembled randomly, just make sure the green lights for green leaves and yellow lights for yellow leaves

Do the same procedure for the other tree

At last, connect the trees with the cabin and connect all three plugs then you can light it on
