

# Lego 42154

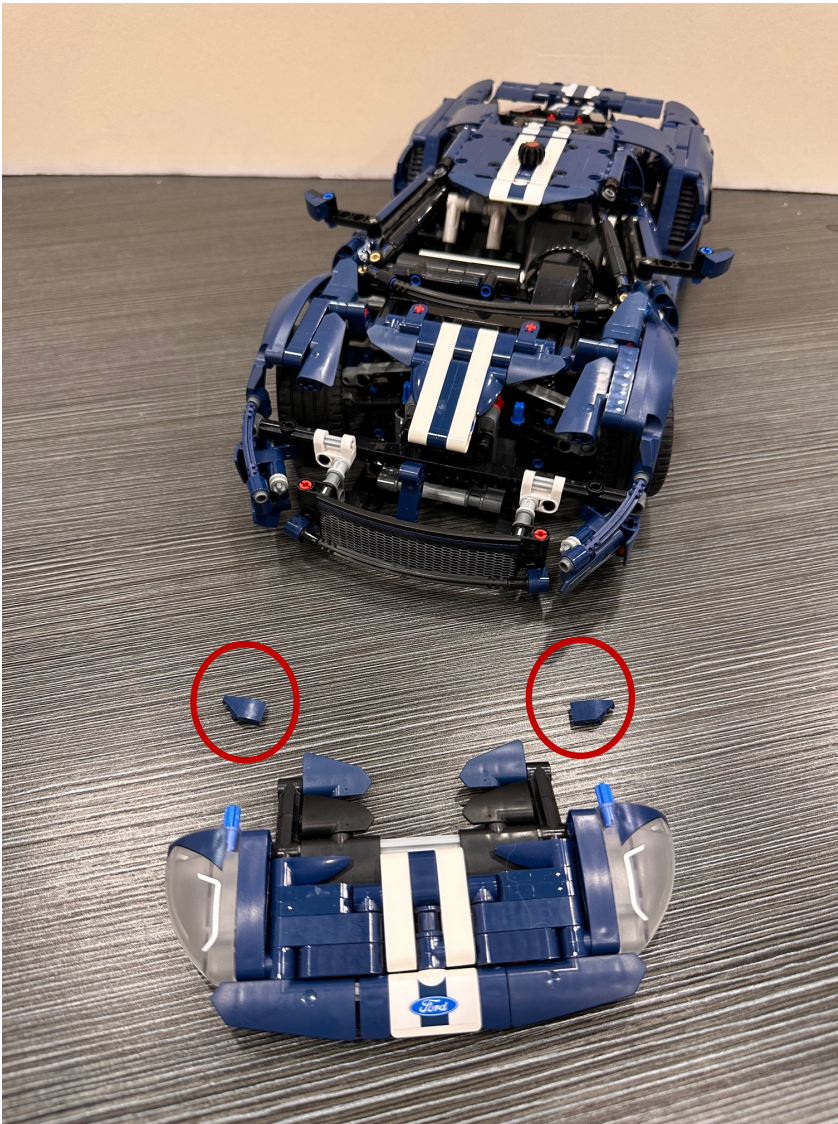

## Ford GT

### *Installation Guide*

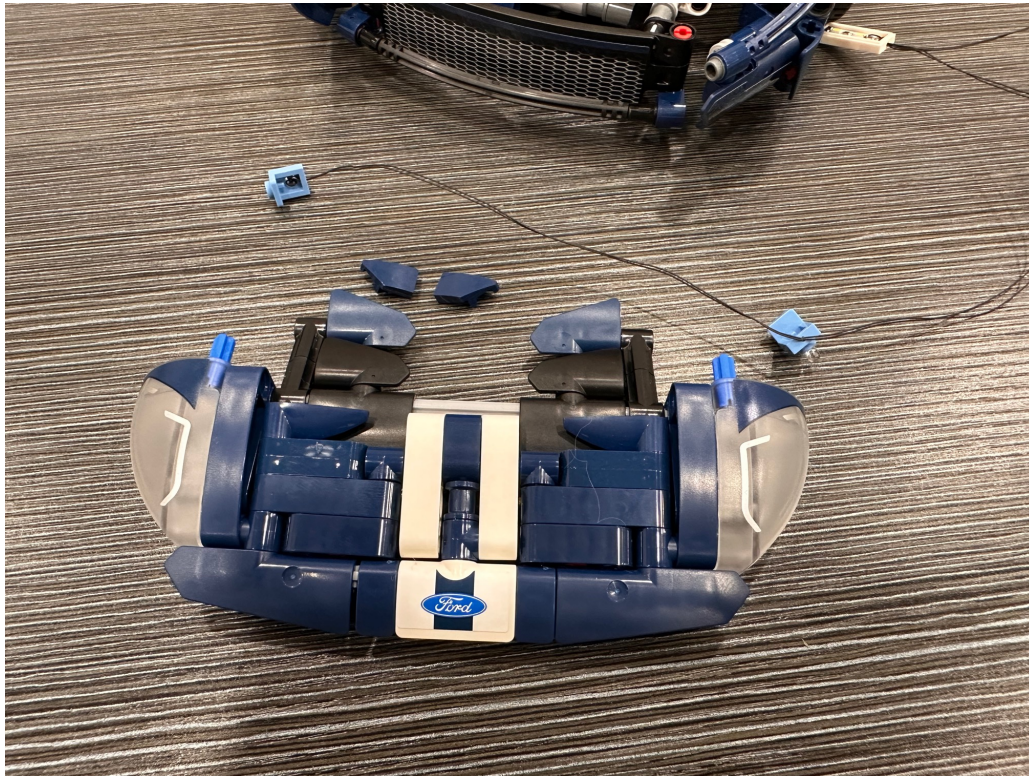

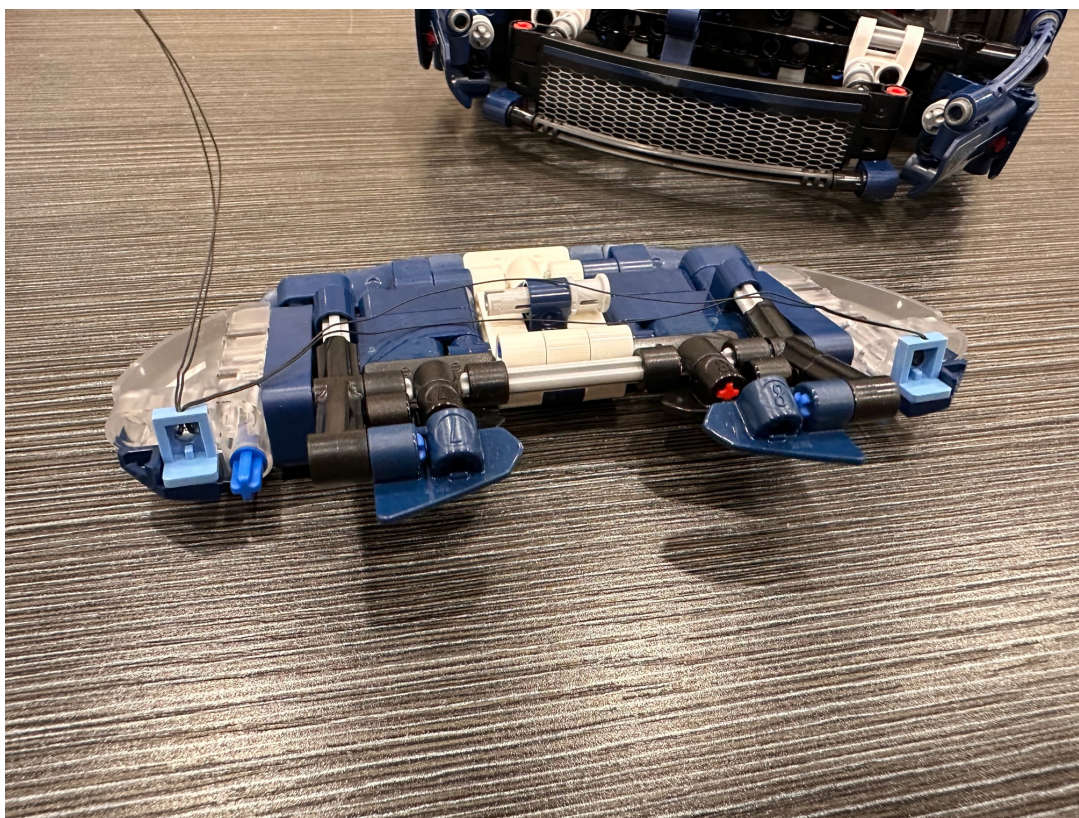

Firstly, remove the front cover and the dark blue parts

Get the lighting set and find the light blue lighting parts at the end

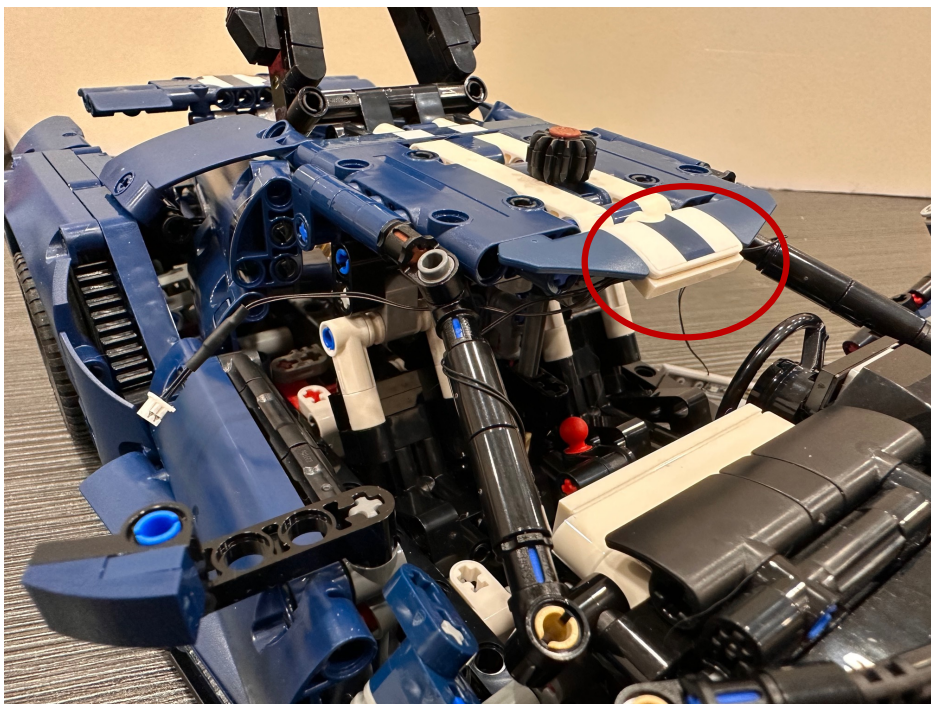

Replace the removed blue parts by the lighting parts mentioned on the previous step

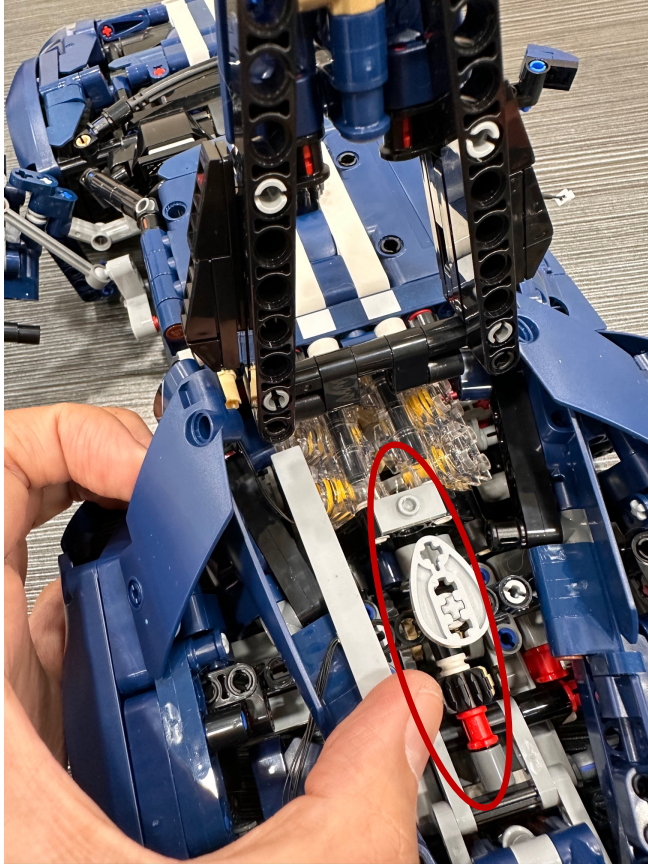

Before restoring the front cover, move the remain lighting parts to the interior of the car by the gap beside the wheel

Stick the white lighting tile at the shown place

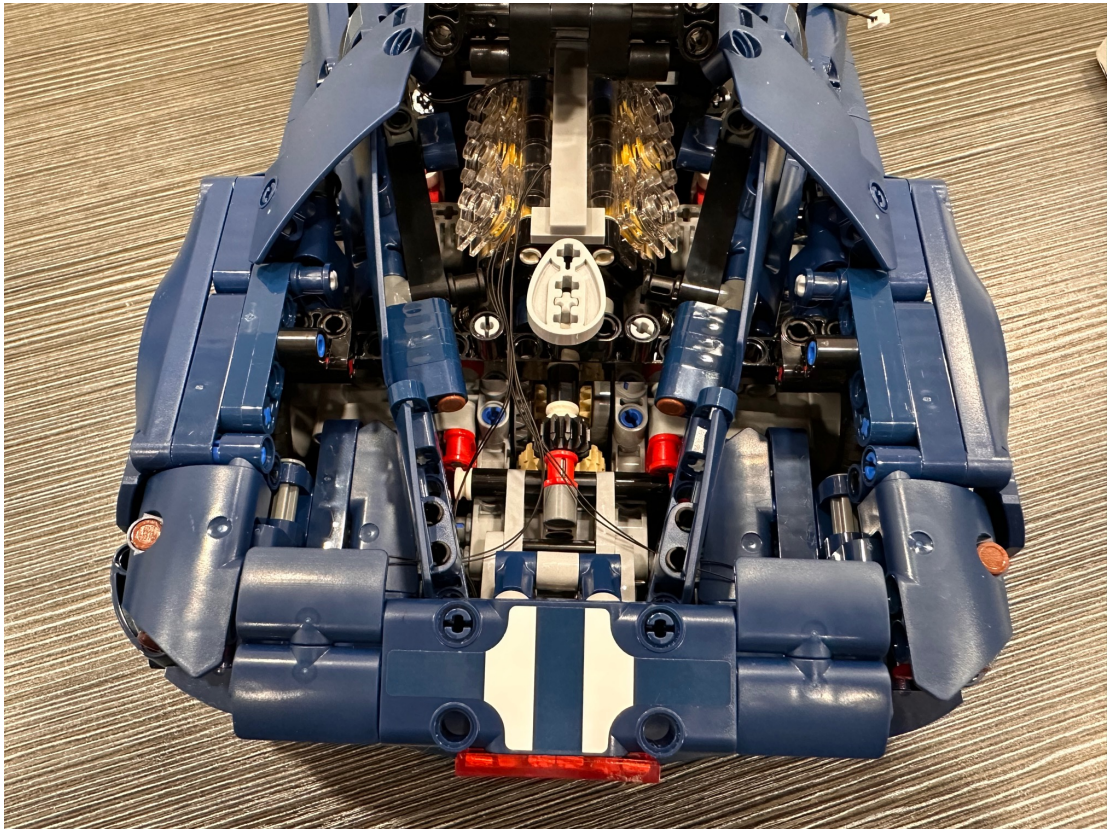

Get the remain lights to the back, remove the light grey tile and replace by the lighting tile

Then assemble the three red lights to the certain spots

Organize the wires at the back then you can put the engine cover back on

To power by the battery, get the connector to connect with the battery case

Then settle the case on the driver seat

To power by USB, get the plug to the back of other seat, then get the connect through the bottom of the car to connect the plug
