

# Lego 10311

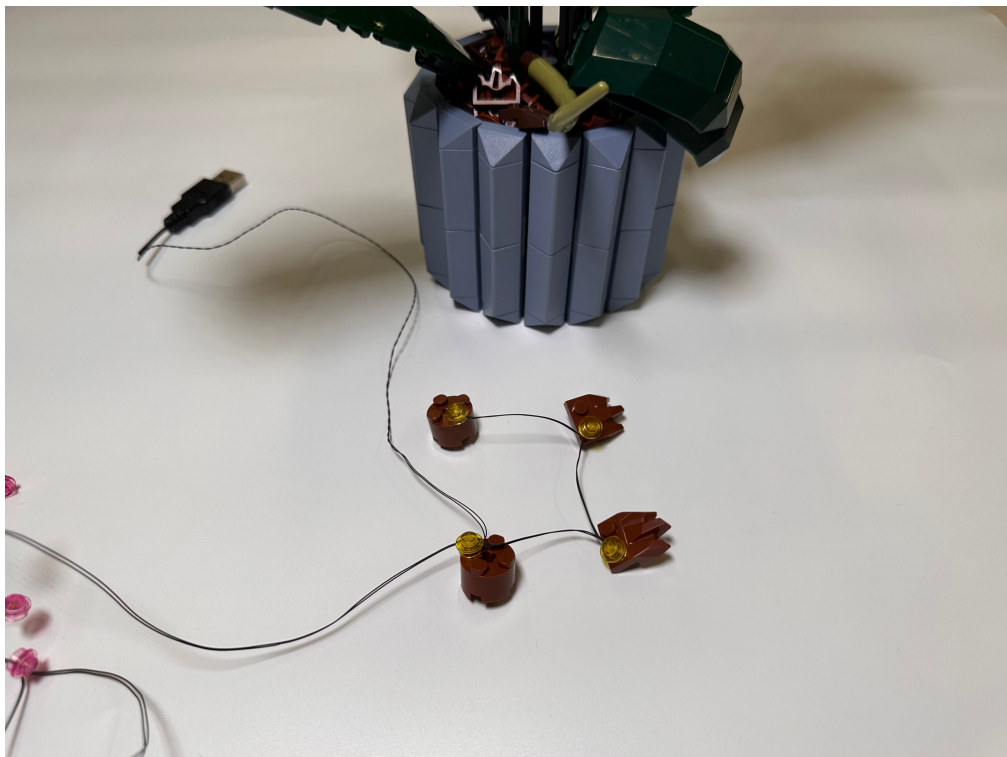

## Orchid

*Installation Guide*

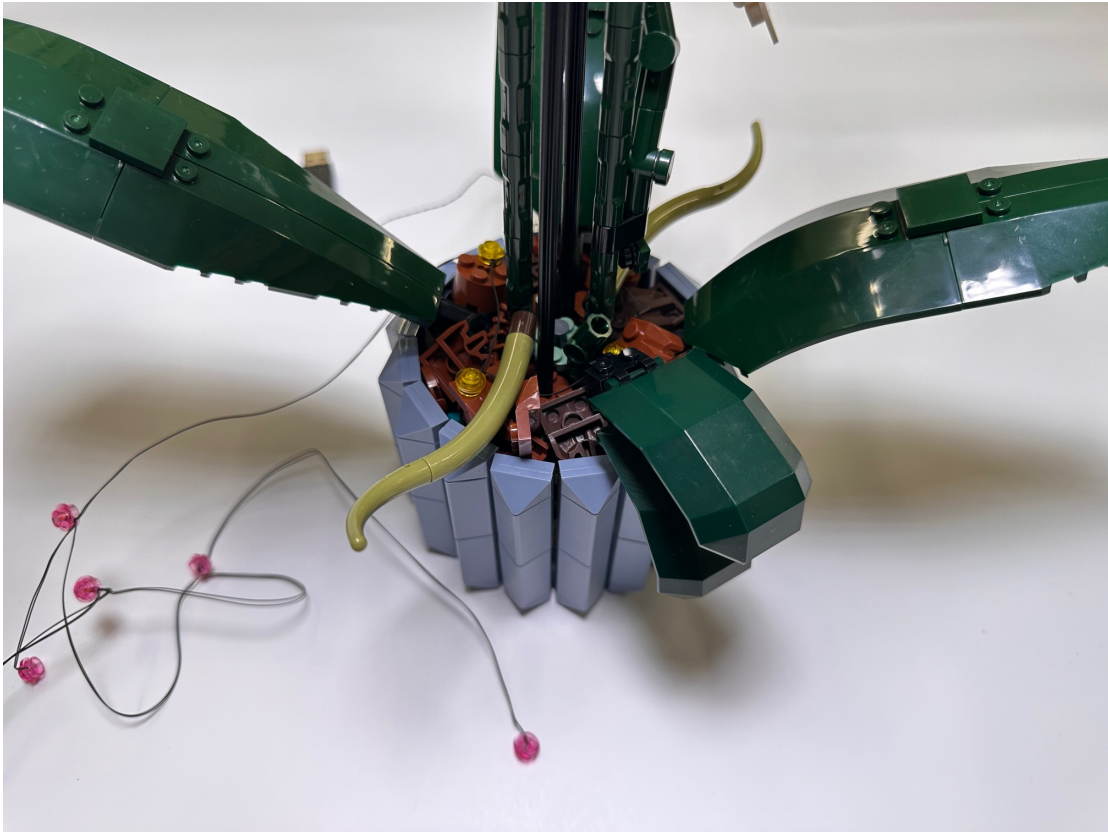

First of all, take four brown parts out from the flowerpot, assemble the lighting yellow round plates to them

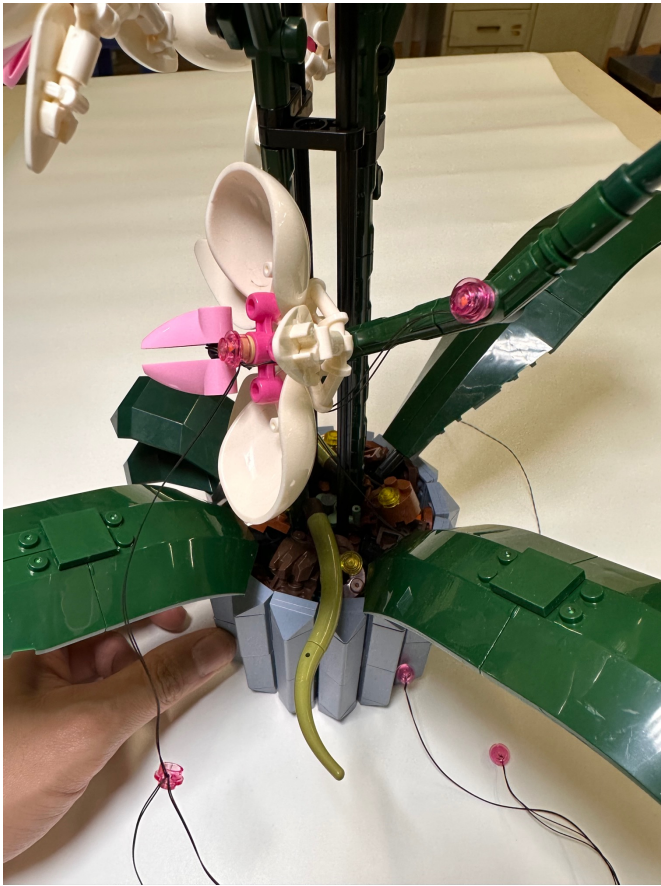

Then put them back to the pot and spread around

Take the pink lighting round plate next to the yellow one and assemble it to the flower which is the nearest to the pot

The lighting plate next to the previous step will be assembled as shown

Then pull the light to the other flower which is next to the one in previous step and assemble as the same way

At the step there should a single round plate connected by a long cable, assemble it to the single flower at the top

For the 3 in a row round plates, assemble them on the remain three flowers  
And the remain one will be assembled on the red circle area

The cables can be hidden behind the flowers, better not to be exposed when you watch at the front

At last, connect the USB cable to power it up
