

Lego 21336

The Office

Installation Guide

Assemble the tan and white lighting tiles to replace the remove tiles
Beware of the direction, the lights of white tiles should be facing the main office side

Then assemble the lighting flame inside the basket at the corner and the yellow lighting round plate to the lamp, the wire in between two lights can be hidden by the cabinet and the chair

The remain lighting round plates will be used to place on the lamp shown in red circle, then in blue circle, move the 1x6 white tiles to fill up the corner

*Use the white 1x2 tile provided to fill up the right corner

Leave the connector for the other lighting part

Now take the other lighting part, start by assembling the green lighting tiles

Remove the green tiles on the side to let the wires go through

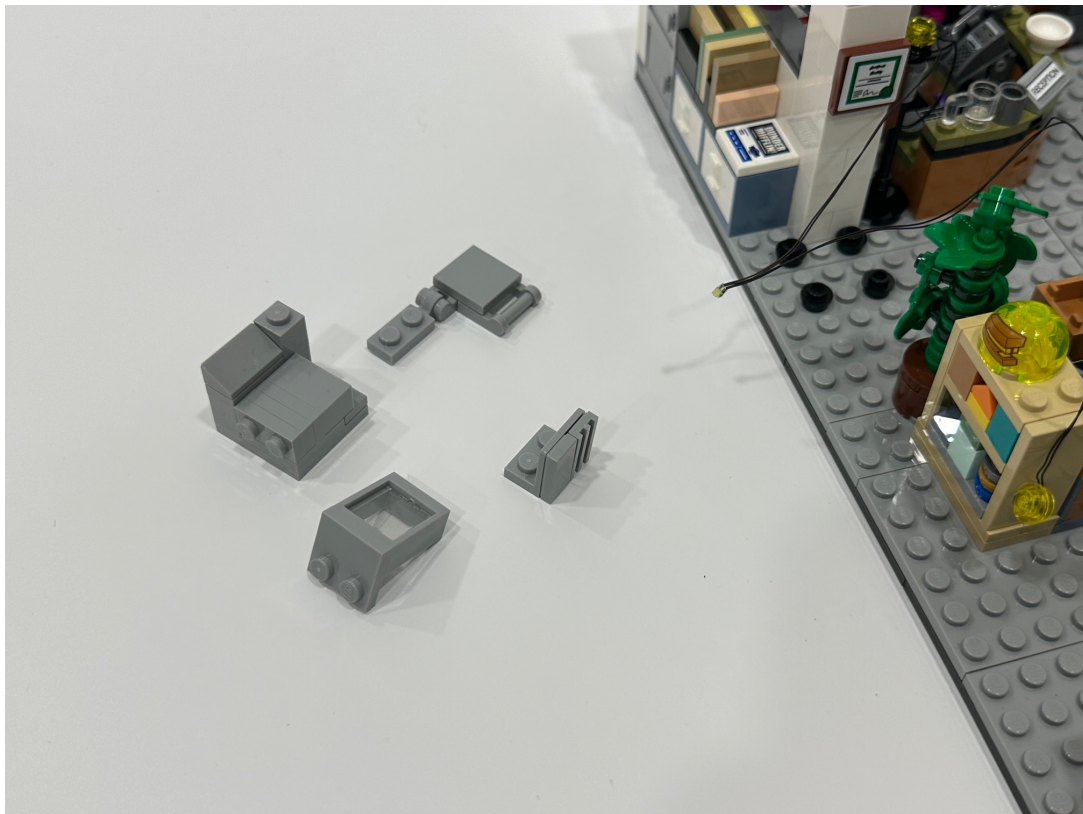

Now assemble the white lighting tiles and put the removed tiles back after that

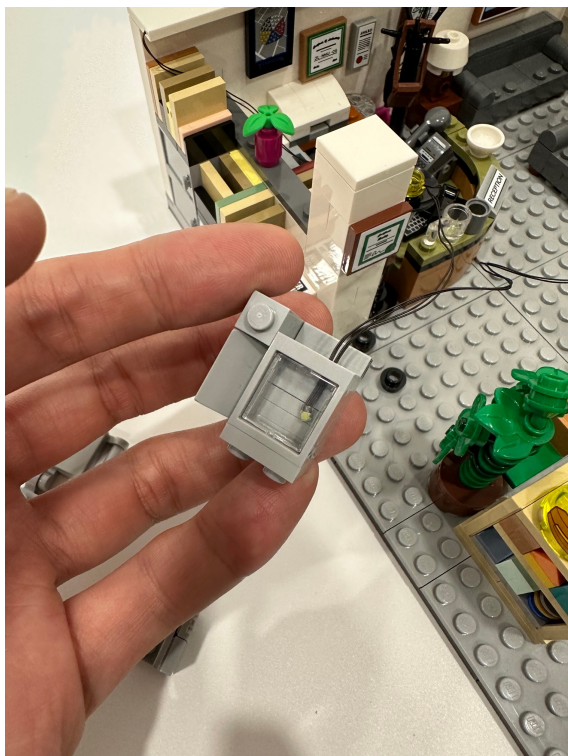

Assemble the lighting round plates on the lamp as shown

The single led bulb will be used to put inside the photocopier, start by detaching the photocopy machine as shown

Clip the led bulb below the clear window, then restore the machine to stable the bulb inside the machine

Assemble the last lighting round plate to the lamp

At last, connect the plugs then you can power up the lighting set by the USB cable
