

# Lego 21341

# HOCUS POCUS

*Installation Guide*

Detach the house and assemble the shown lighting parts into the detached house

Remove the flame from the fireplace and replace by the lighting parts

Replace the flame on the candle after that, the wires in between can be hidden behind the rack

The lighting 1x4 plate leftover would be assembled in here

The light installation for this part is done  
Now just put it on the side until the remain parts are done

Before the installation, remove the shown parts of the house

Take the brown lighting plates with **two connectors** attached to assemble them on the side **without spider web** attached. Beware the two plugs are different, the female plug in red circle has to be assembled on the side which faces the back door

Assemble the other lighting plates to the side with web attached  
Watch the direction, the connector should be placed close to the bed

Take the candle down and replace all the flames by the lighting flames

Restore the candle and connect the plugs right above it

Combine the house, before that leave the connect with male connector outside, the other one would be moved inside the house and lift to upstairs

Connect the plugs as shown in red circle

Take the candle stands out from 2<sup>nd</sup> floor, replace then by the remain lighting parts  
\*The candle flame is located at the very end of the lighting parts

Then the candle which stands on the bucket, replace the flame as well

Now take the candle stands in downstairs, take the flames out and replace by the lighting parts

Now put the candle stands with lighting flames assembled back to where they were

Replace the lantern at the front door by the lighting lantern  
You can pass the lantern out of the door through the window or the door

Take the remain lights to upstairs and assemble the lighting plate as shown  
Then restore all the candle stands

The installation of the lights is done, now take the connectors out to gather both of them, connect the USB cable then you can power it up
