

Lego 10326

Natural History Museum

Installation Guide

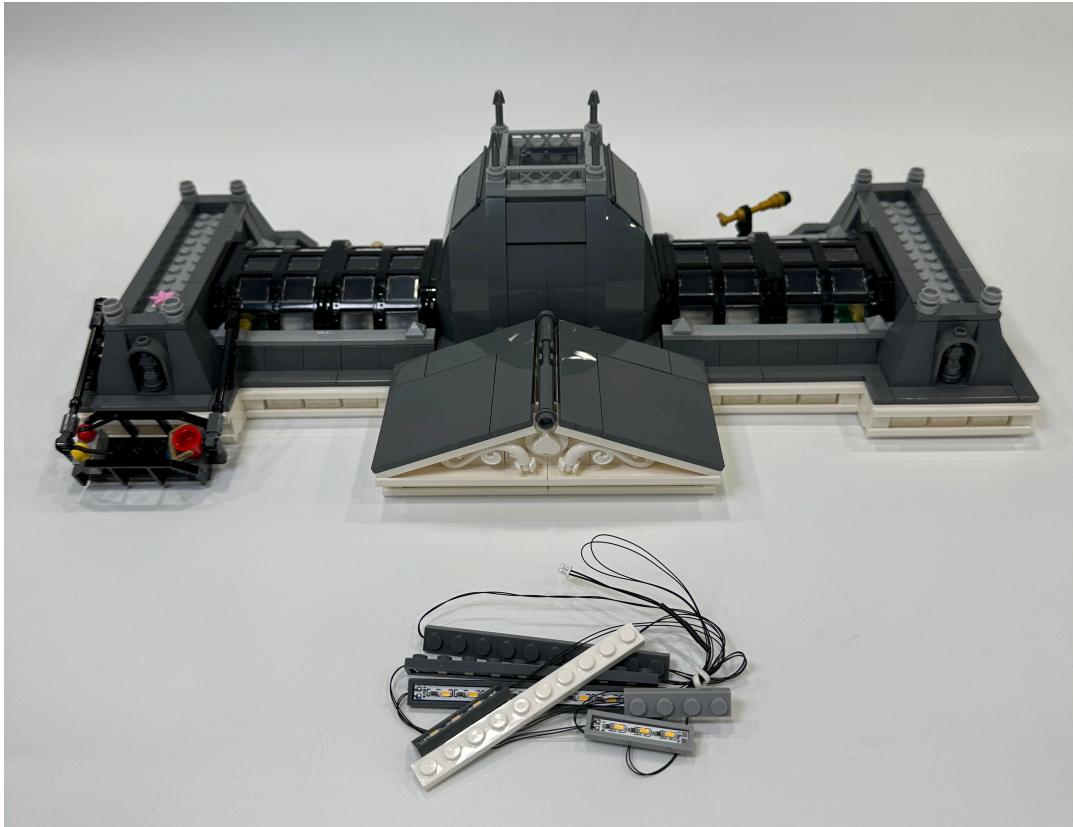

Start from splitting the building by 3 floors

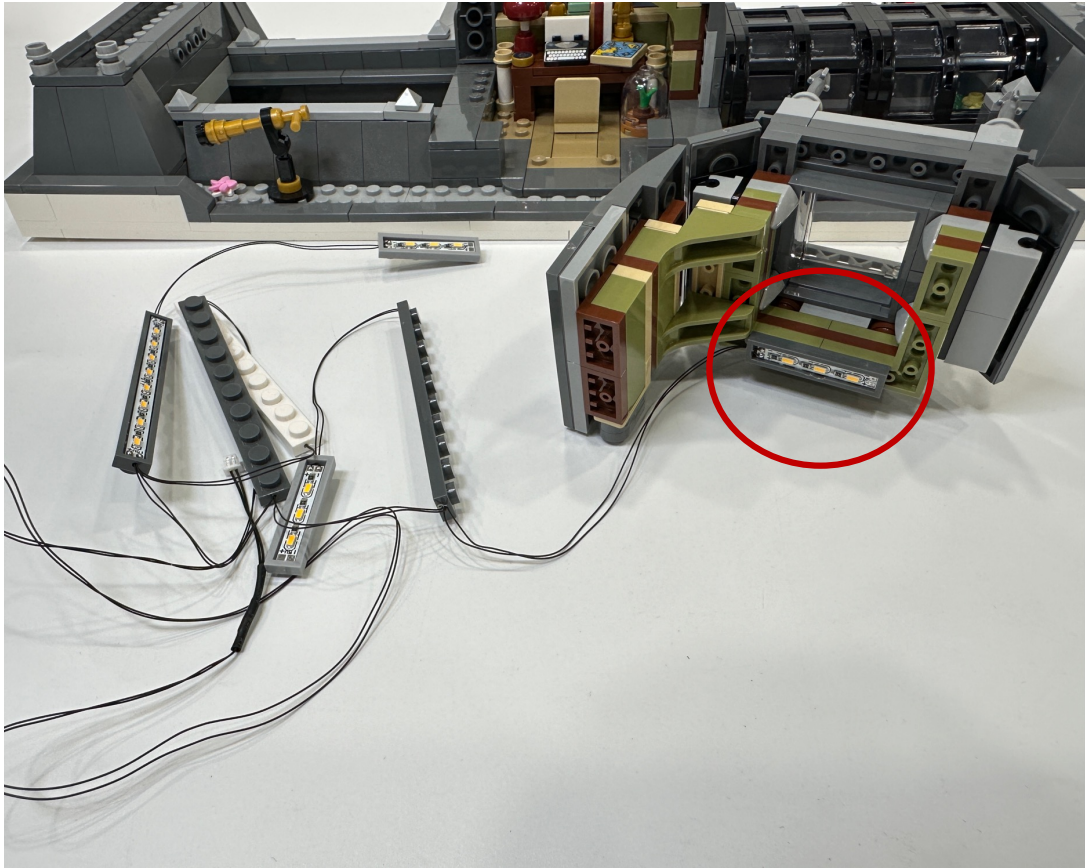

Take the lighting part A to assemble it to the roof

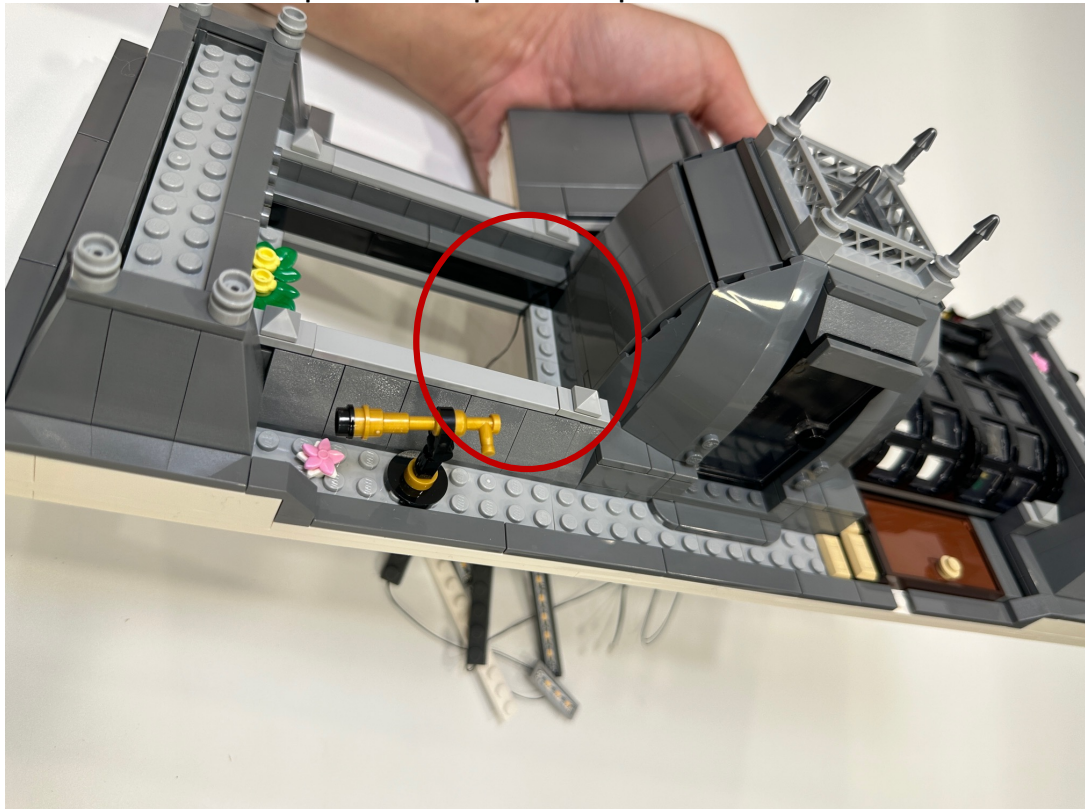

Turn to the back and detach the shown parts from the roof

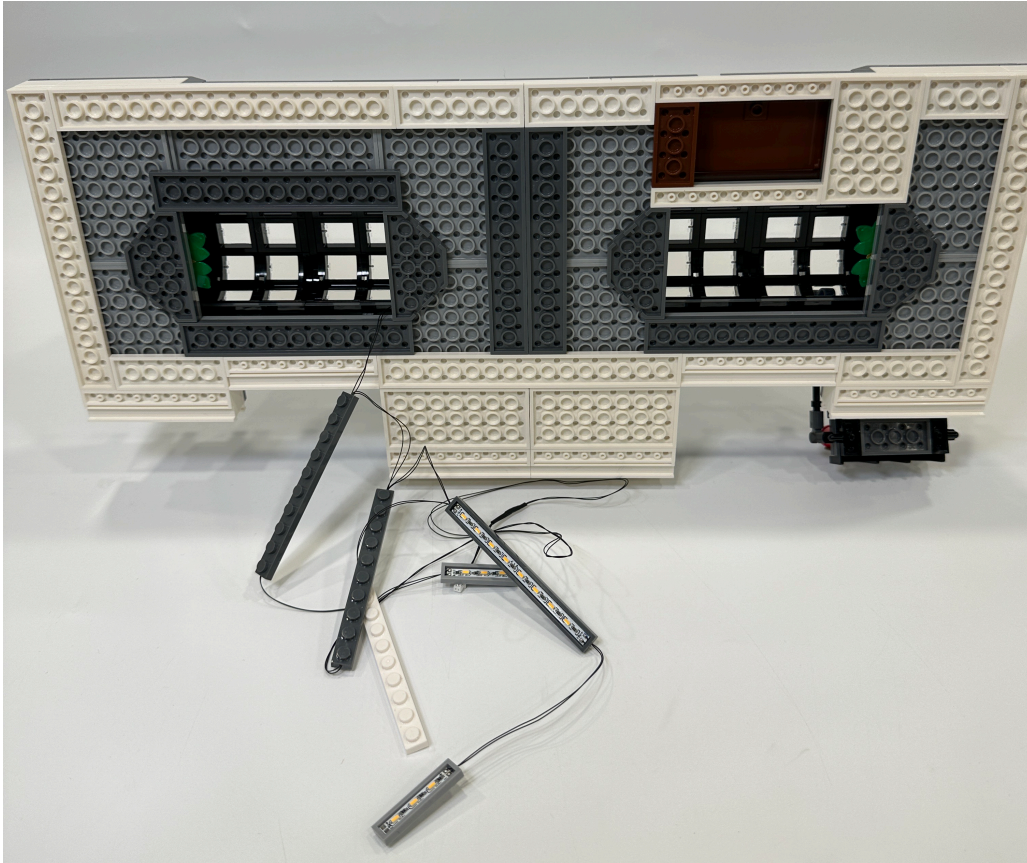

Get the dark grey lighting plate at the end to assemble it

Restore the part from the previous step back to the roof, place the wire connecting to the remain lights at the shown spot then restore the other parts except the top window

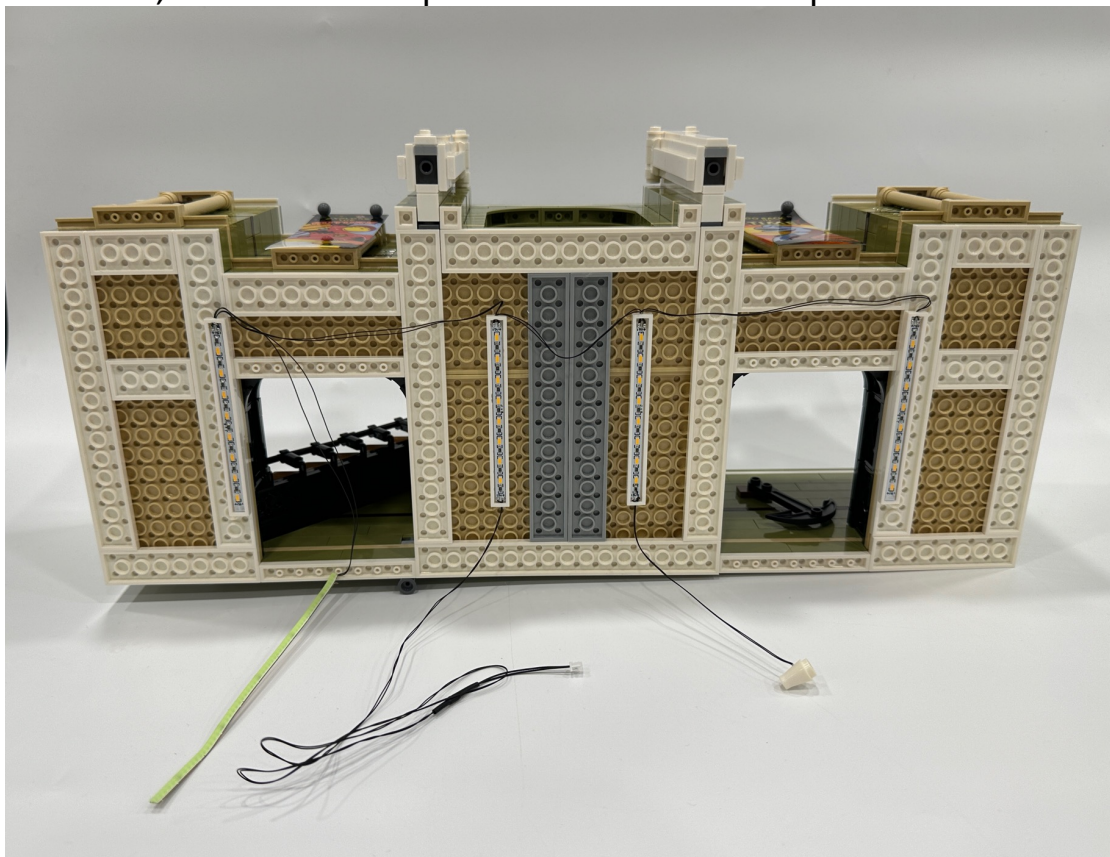

Restore the top window, then assemble the lighting plates as shown

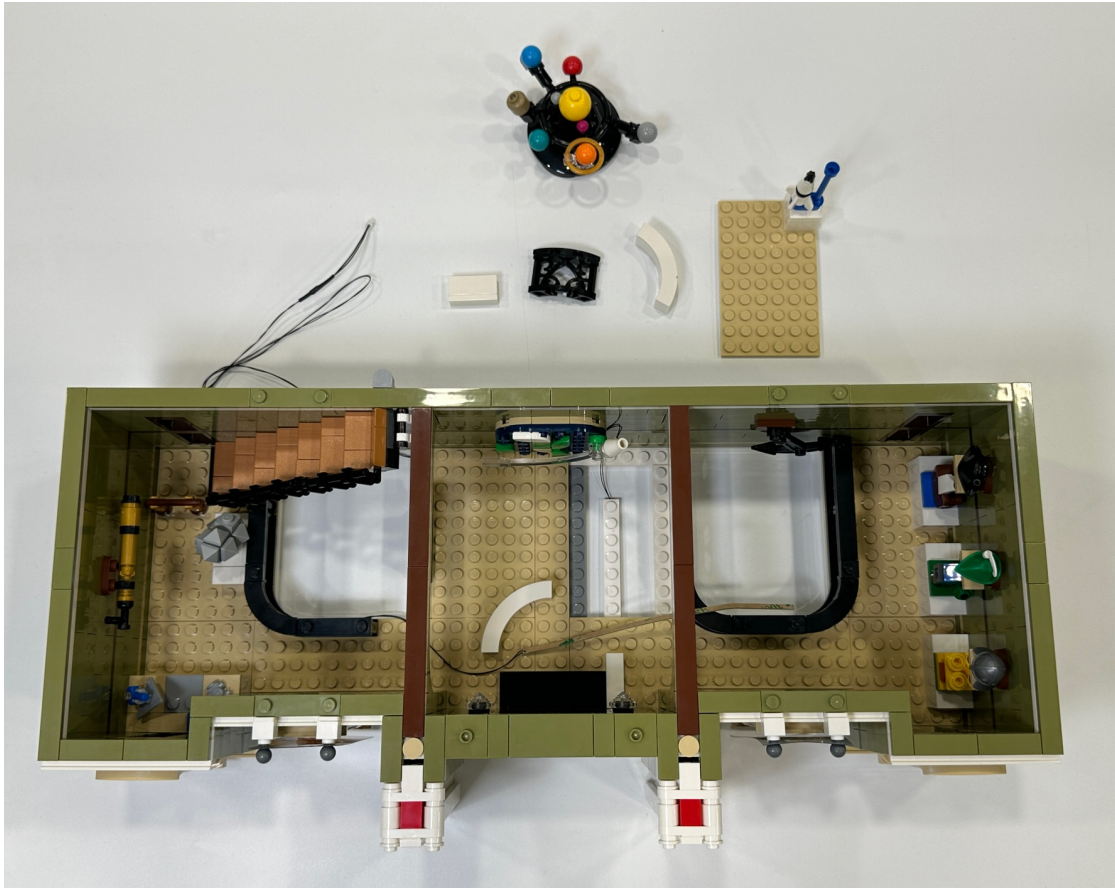

Take lighting part B for the 2nd floor

Starting from assembling the white lighting plates at the bottom this time, make sure the position is same as the picture shown

Flip the model upside down, remove the shown parts

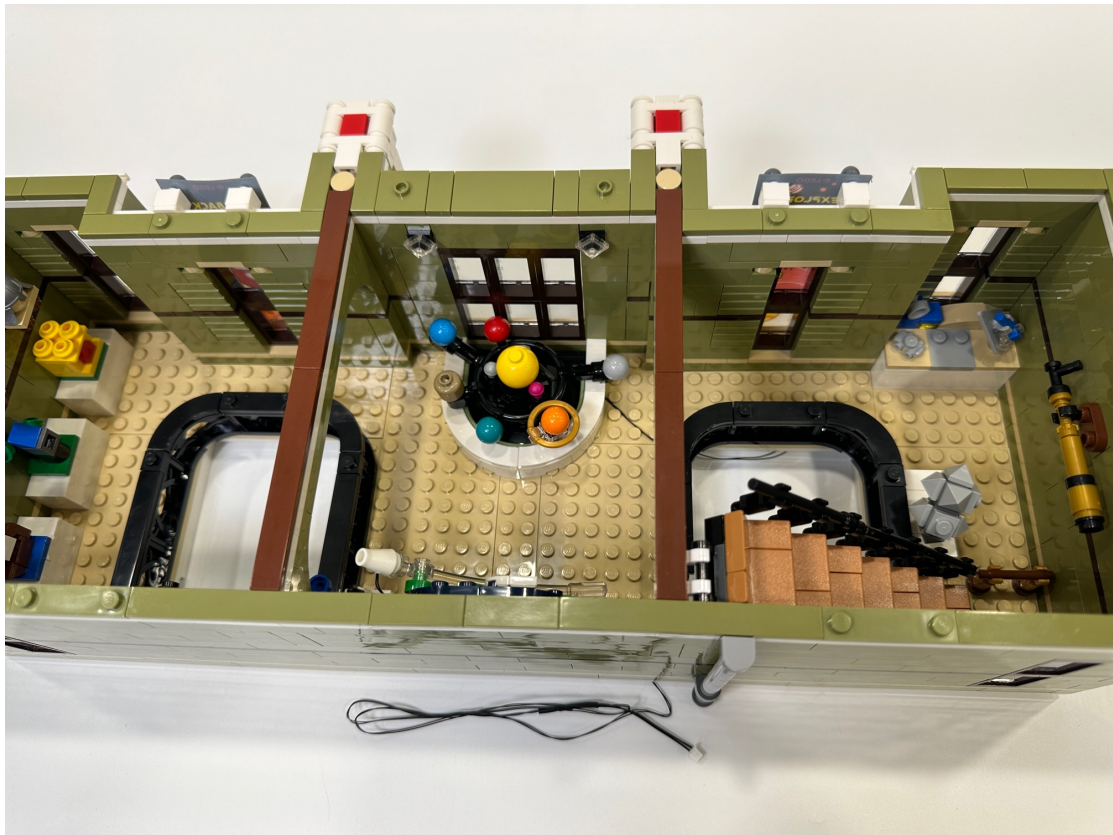

Replace the white cone on the wall by the lighting cone, place the wire properly then restore the tan plate

The led strip would be moved to the front window and stick it as shown

Restore all the removed parts then this floor is done

Combine with the roof and connect both plugs to the USB cable

Take lighting part C for the 1st floor, remove the lamps from the front door first

Take the black round plates from the lamps and place them with the lighting round bricks

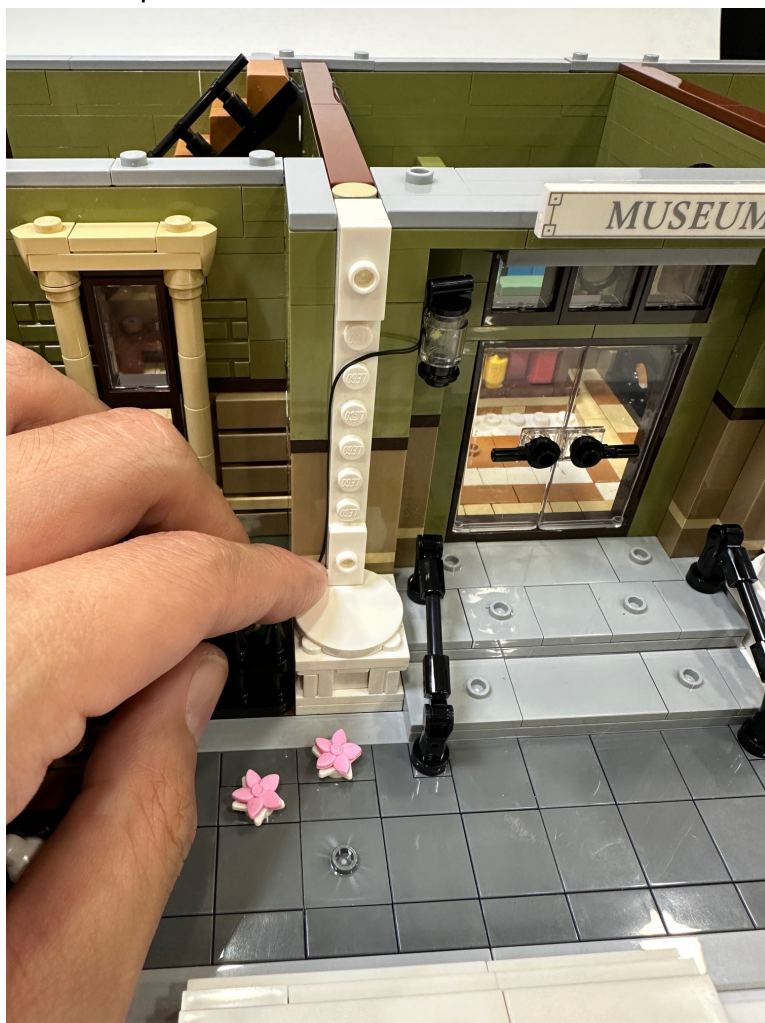

Remove the shown parts and place the lighting round bricks to the lamps position

Use the L-shaped brick and the pole to cover the wires when you restore the parts. Beware the wires can't be placed on the studs or they would be damaged when you merging the bricks

After the parts are restored the wires should be hidden as many as possible

Place the wire with connector to the back and stable by the tiles

Take the remain lights to the side

Take the top round plates from the flower and place the lighting round plates on them and put the removed round plates on the lighting ones

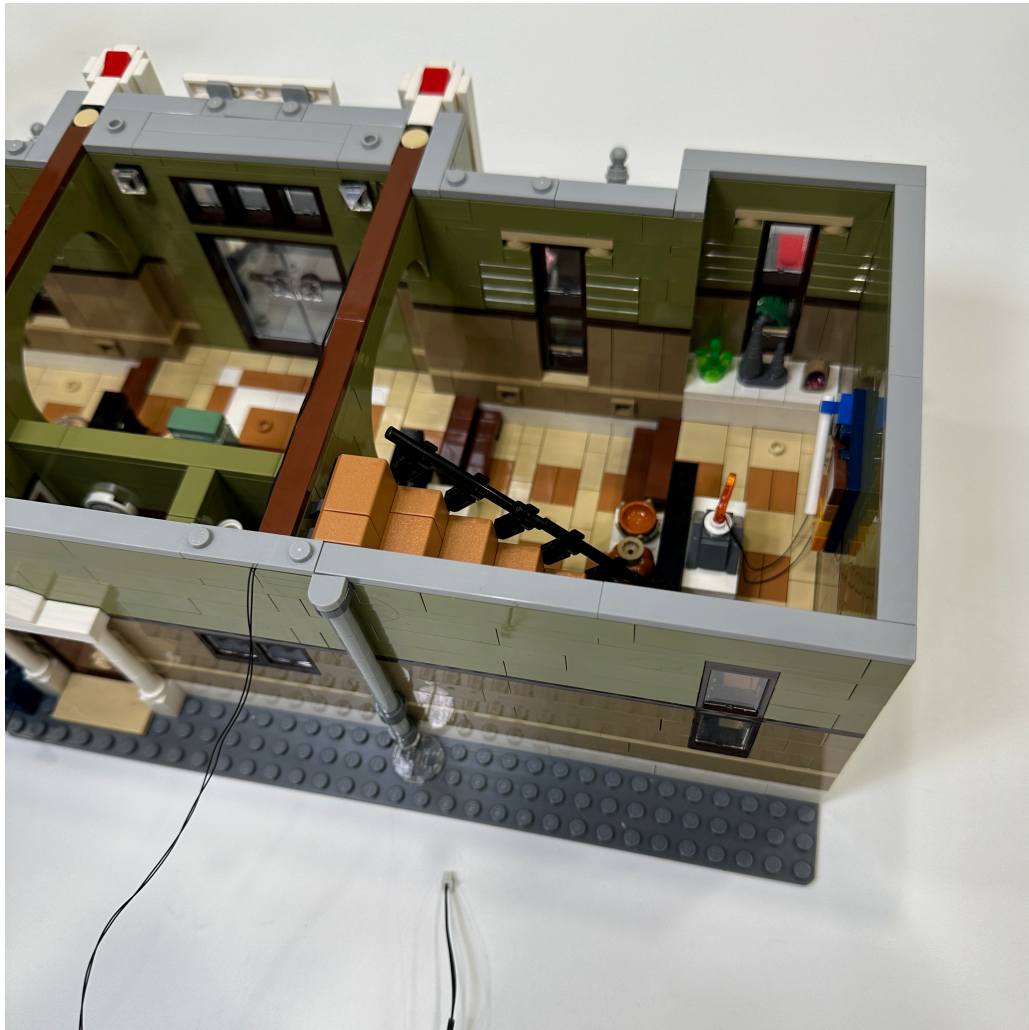

Remove the window at the corner

Place the remain lighting parts inside the house then restore the window and restore the fire on the candle

After part C is assembled, take the tree off, get part E and assemble the lighting round plates on the flowers same way as the previous one

Then assemble the pink lighting round plates on the tree evenly

Put the tree and the flowers back, replace the lamppost then it's done

Connect the plugs from part C and D with the USB cable

Part E would be assembled under the skeleton and the battery case would be placed under the stage
