

Lego 40650

Land Rover

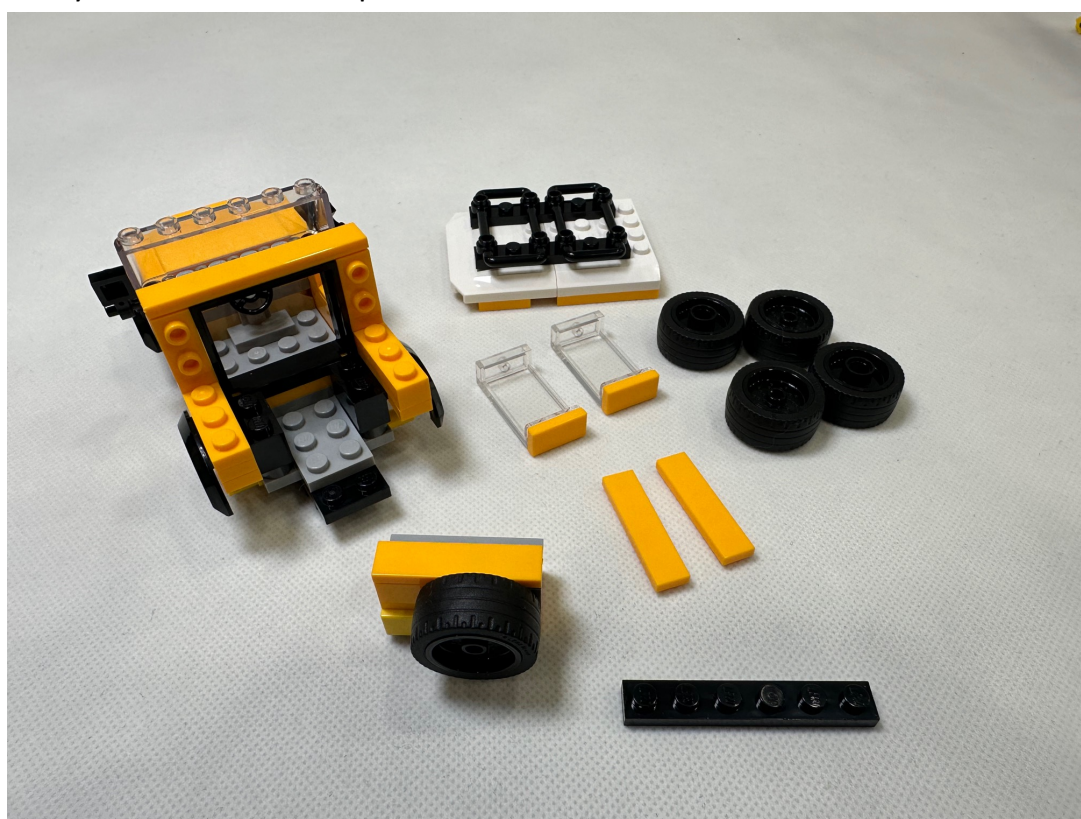

Classic Defender

Installation Guide

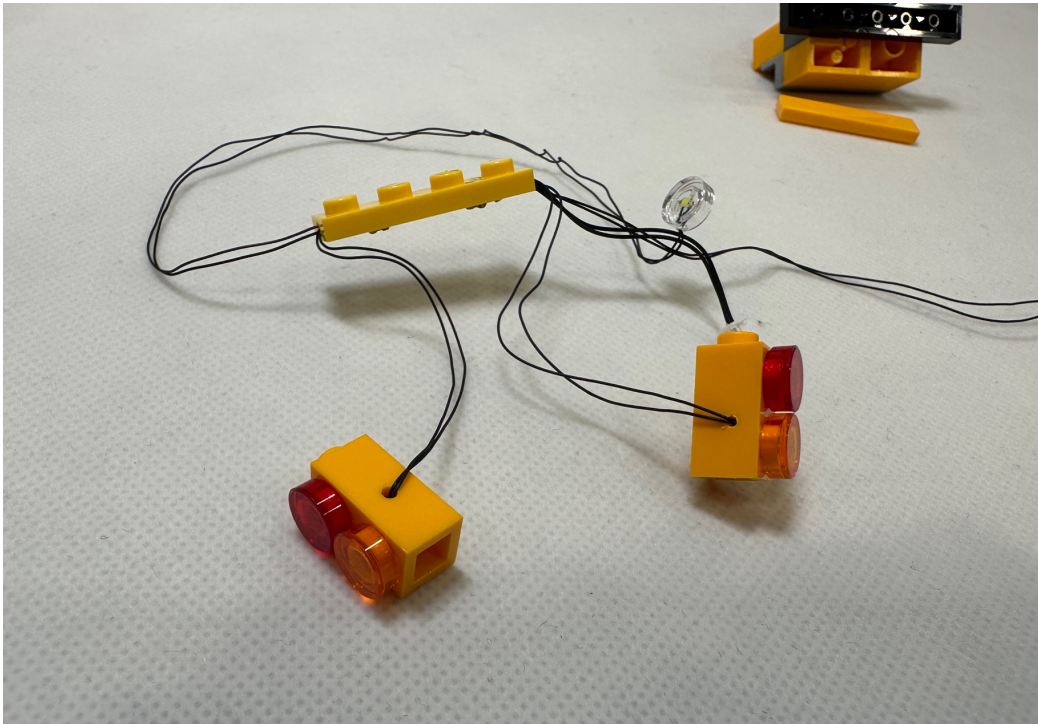

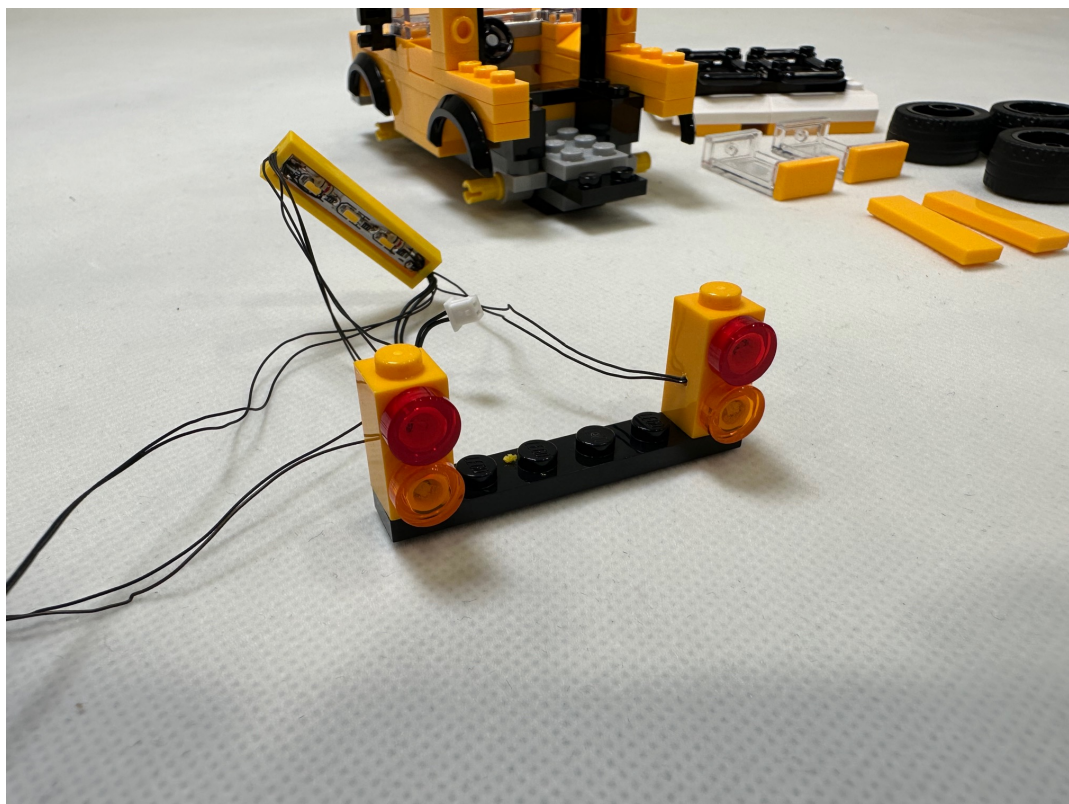

Firstly, detach the shown parts from the car

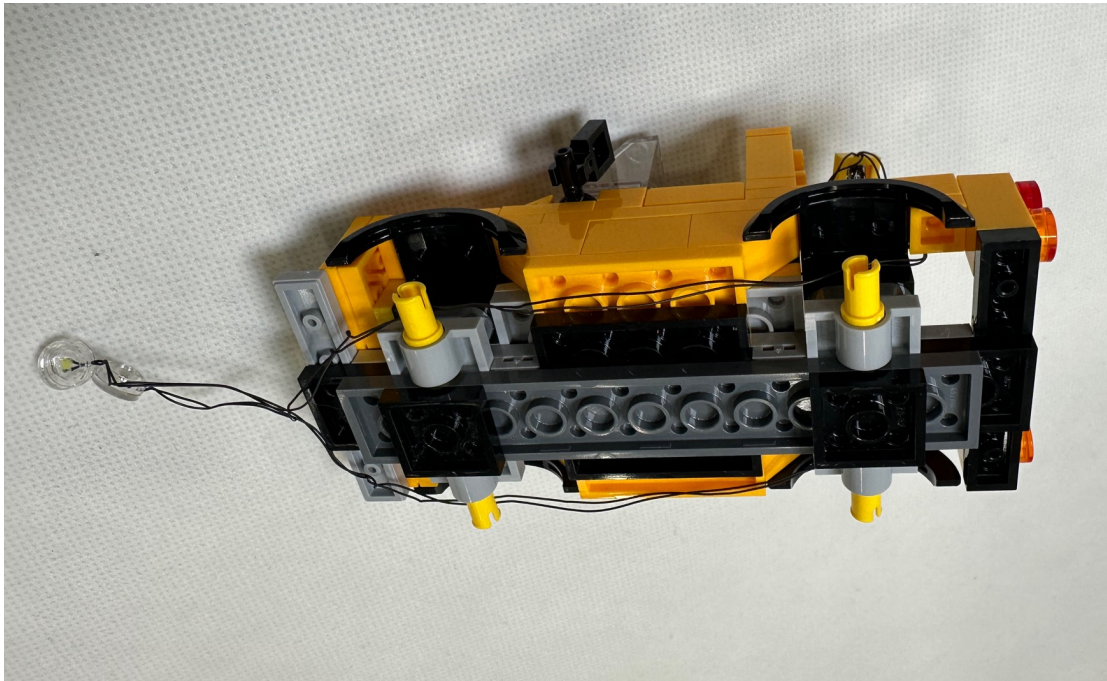

Remove the clear red and orange round tiles from the model and put them on the lighting kit

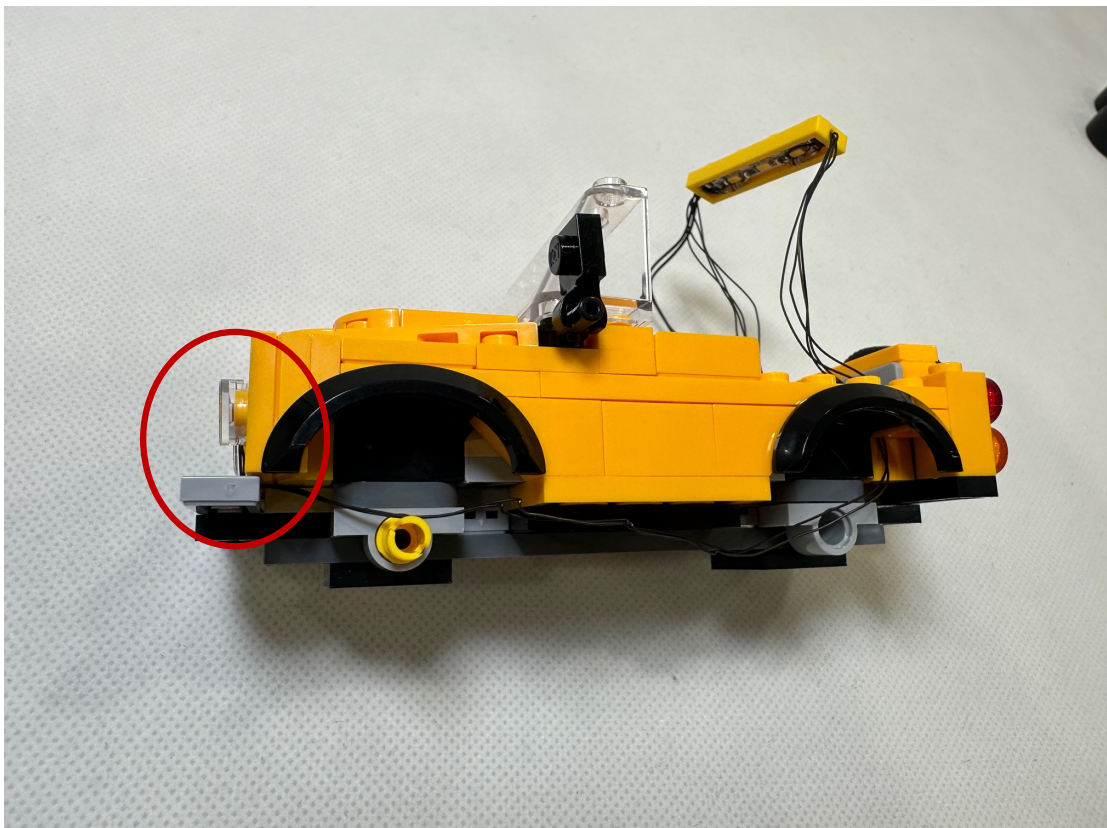

Place the lighting bricks with clear tiles attached on the black plate to replace the one from the model

Move the lighting clear round tiles of both side to the front side of the car

The tiles can be get though by the gap between the grey tile and the yellow part

Remove the plate at the front, then place the wires attaching the lights at the plate located

Then put the plate back to cover the wires

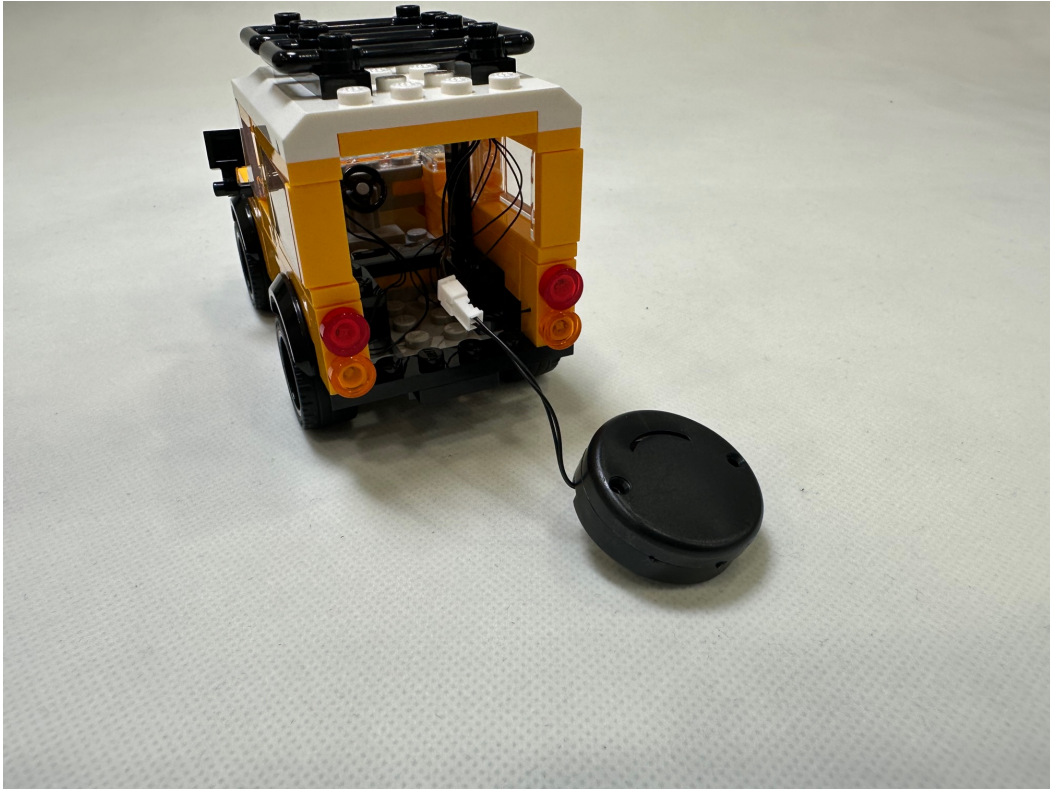

Now you can restore the tires, tiles and side windows

Assemble the lighting plate to the top, you have to place it exactly the same slot as the picture shown

To power by battery, connect the cable with the battery case

Put the case into the car, then restore the rear door

To power by USB, get the plug from the USB through from the bottom by the hole in red circle to connect the plugs, then restore the rear door
