## Family Tree

### *Installation Guide*

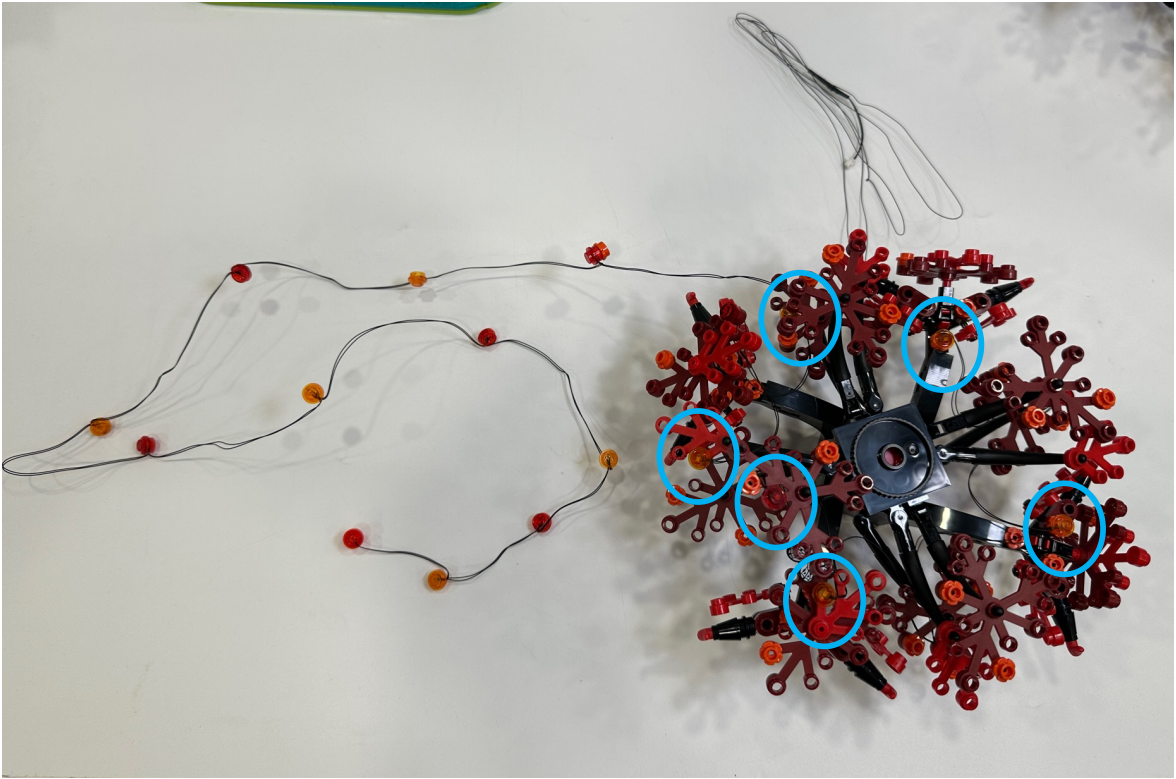

Before taking the lighting part A to assemble on the tree, split the tree as shown

Pick the lighting round plate next to the connector, assemble it on the branch at the lowest level

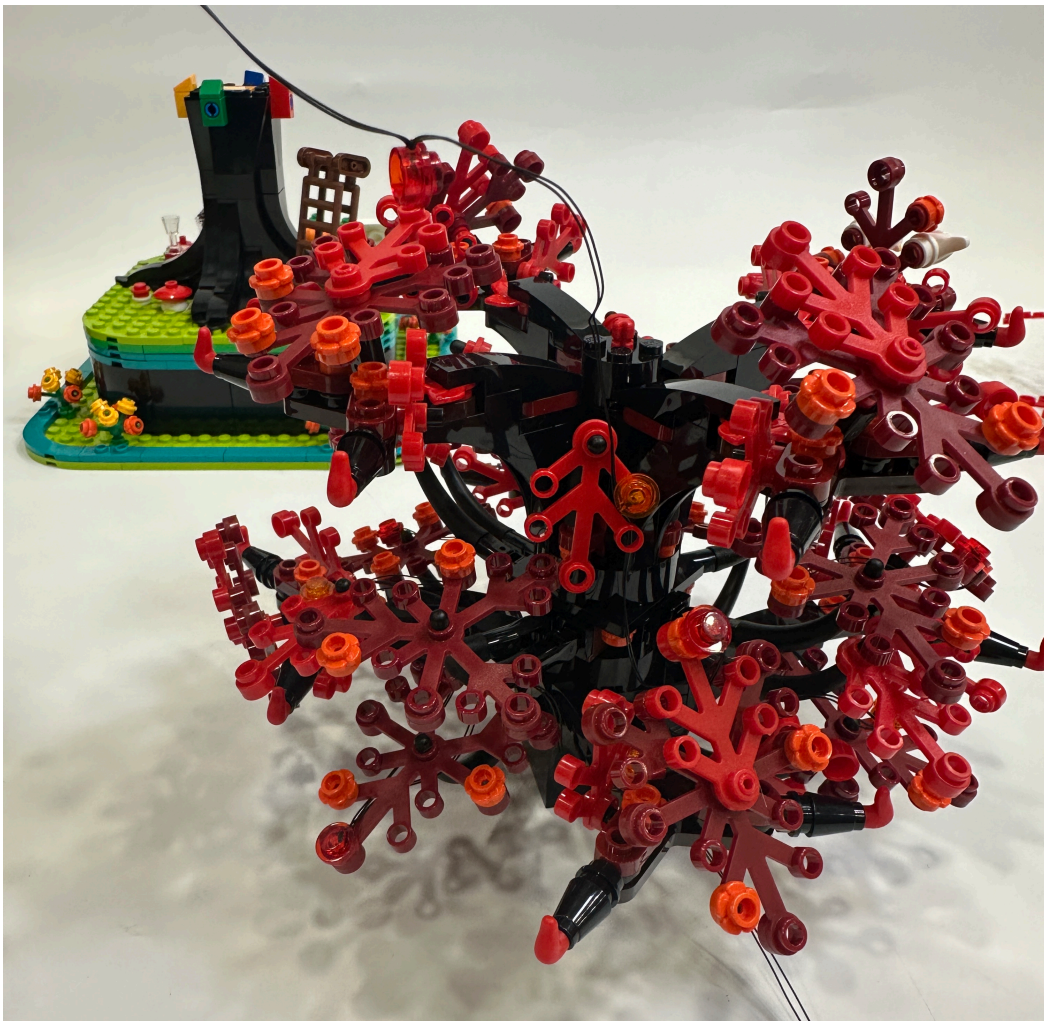

Then assemble the lighting plates on the tree randomly

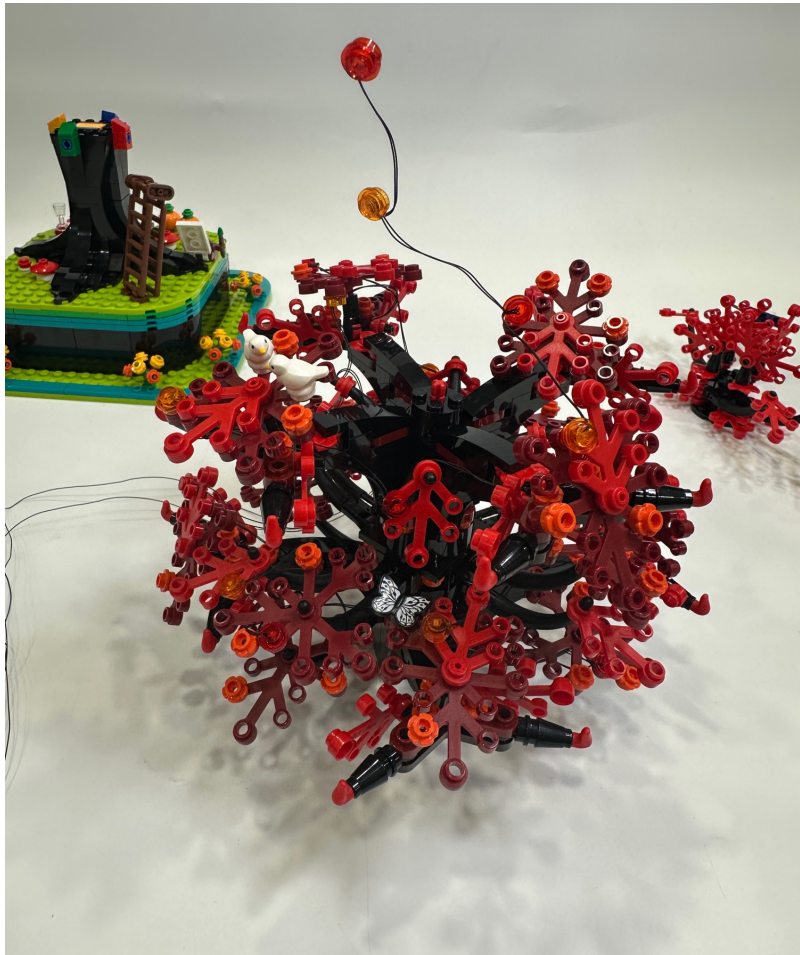

The wires should be placed inward to be hidden by the branches

Combine the second layer of the tree then assemble the lighting round plates by the same way

Reserve few pieces of the lighting round plates to assemble on the top layer

Restore the whole tree then assemble the remain lighting round plates on it

Put the tree back and place the wire with connector at the rear side of the model

Take lighting part B, firstly replace the camera by the lighting part  
Then replace the black round plates and assemble the orange round plate

Continued by the orange round plate, assemble the yellow round plate and replace the black one under the lamp, follow the path by the blue line to hide the wire at the bottom in between the green studs and the black blocks

Turn to the back and assemble the remain lighting round plates

Assemble the remain lighting round plates on the flowers around, at last place the connector out from behind

Now you can connect the plugs with the USB cable to light it up
