

# Lego 10340

## Wreath

### *Installation Guide*

Before the installation, spread out the lighting kits and match up the position of the yellow lighting round plates to the yellow parts on the model (all three circles) and we will start by assembling the lighting round plates at the end first (blue circle)

Assemble the red and yellow lighting round plates as shown then cover the wires by the leaves

For the green lighting round plates, assemble them on any studs on the leaves as you like, just remember to spread evenly and hide the wires then you would assemble the second red round plate beside the blossom

Continue to assemble the green and yellow round plates as followed

After the yellow round plate, assemble the green and red round plates

After the red, assemble the remain lighting round plates and leave the plug out to connect with the USB cable

Now you may power up to final check, adjust the position of the green lighting round plates if you're not happy with the effect
