X-Men: The X-Mansion

Installation Guide

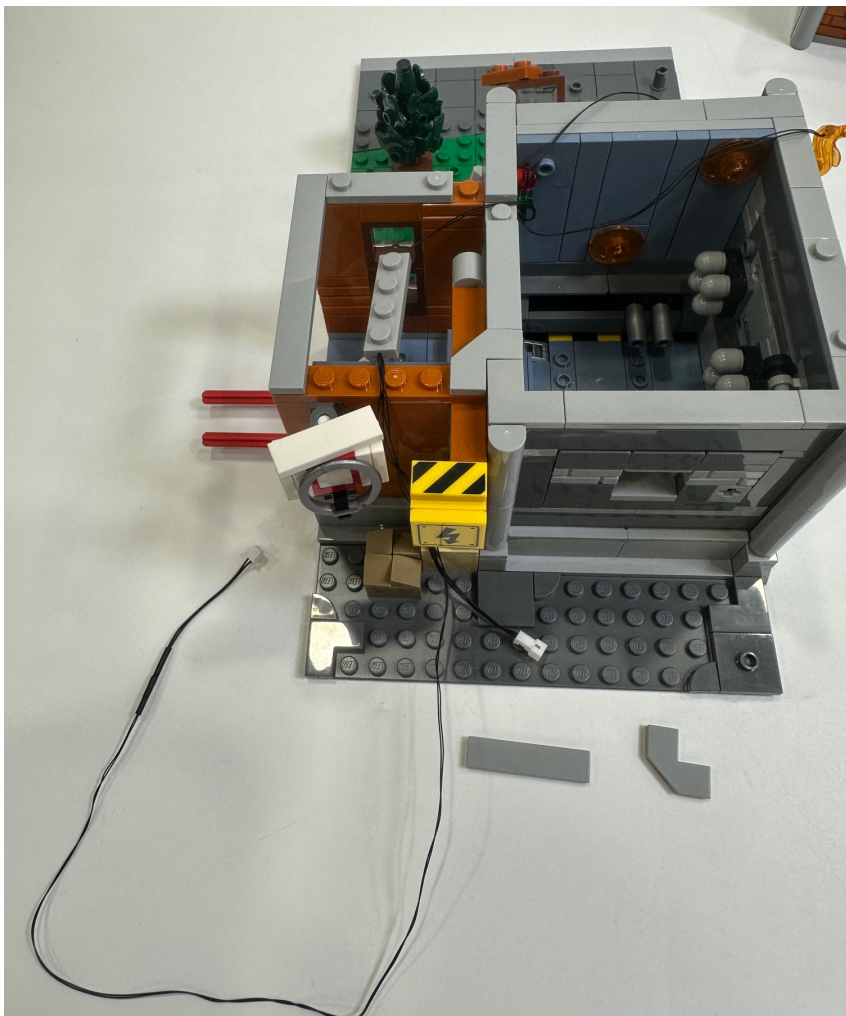

Split the X-Mansion, and the lighting parts ABC would be assembled to the corresponding session

Before assembling the lighting part A, split the session by layer first

Get the 1x4 lighting plate and place it at the shown area, use the studs by removing the shown tiles to stable wires

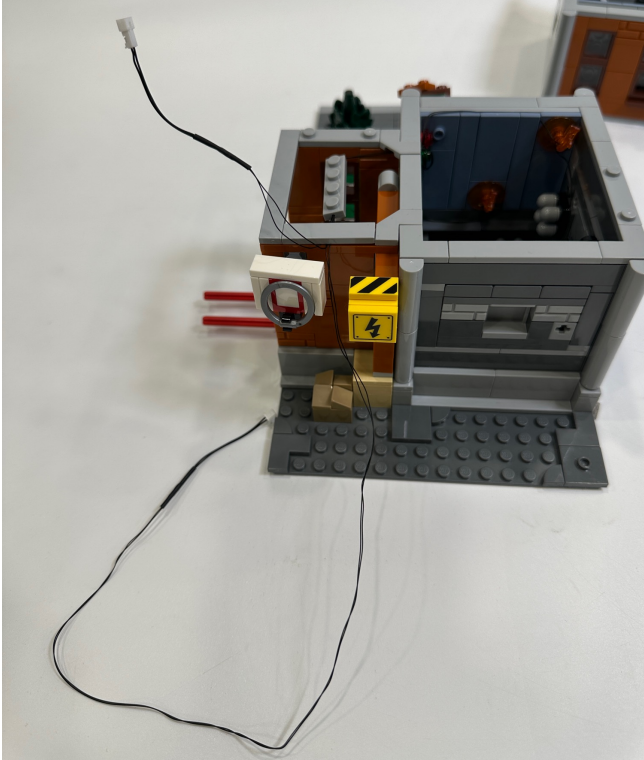

Replace the red and green round plates and the flames on the wall by the lighting parts

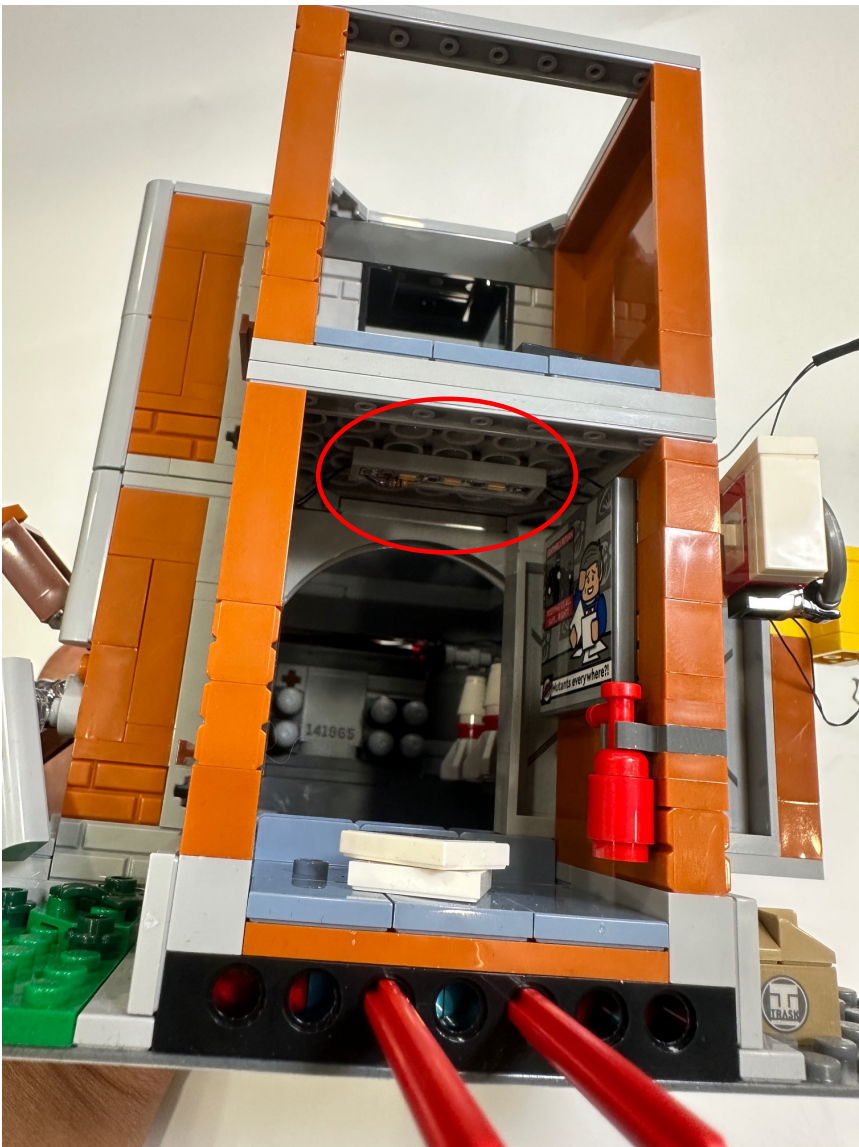

Then replace the red round plates on the other side
The wires could be hidden inside the gap of the removed walls

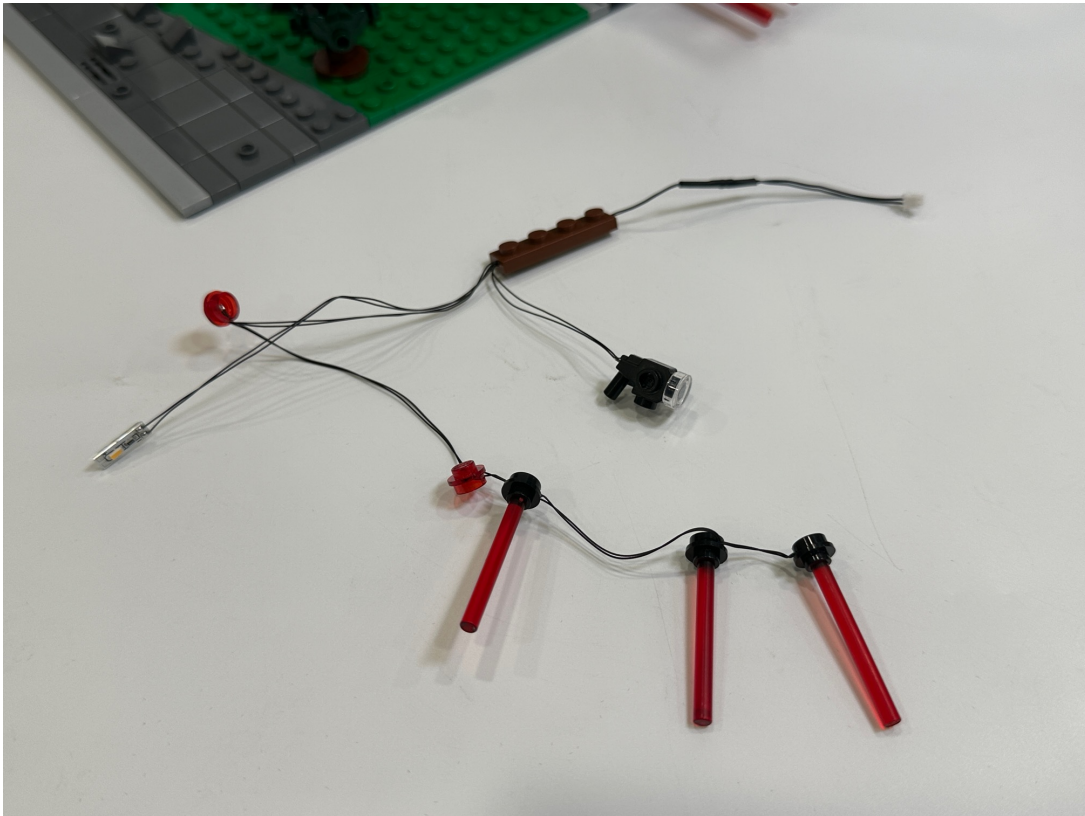

Restore the tiles removed and leave the connectors out

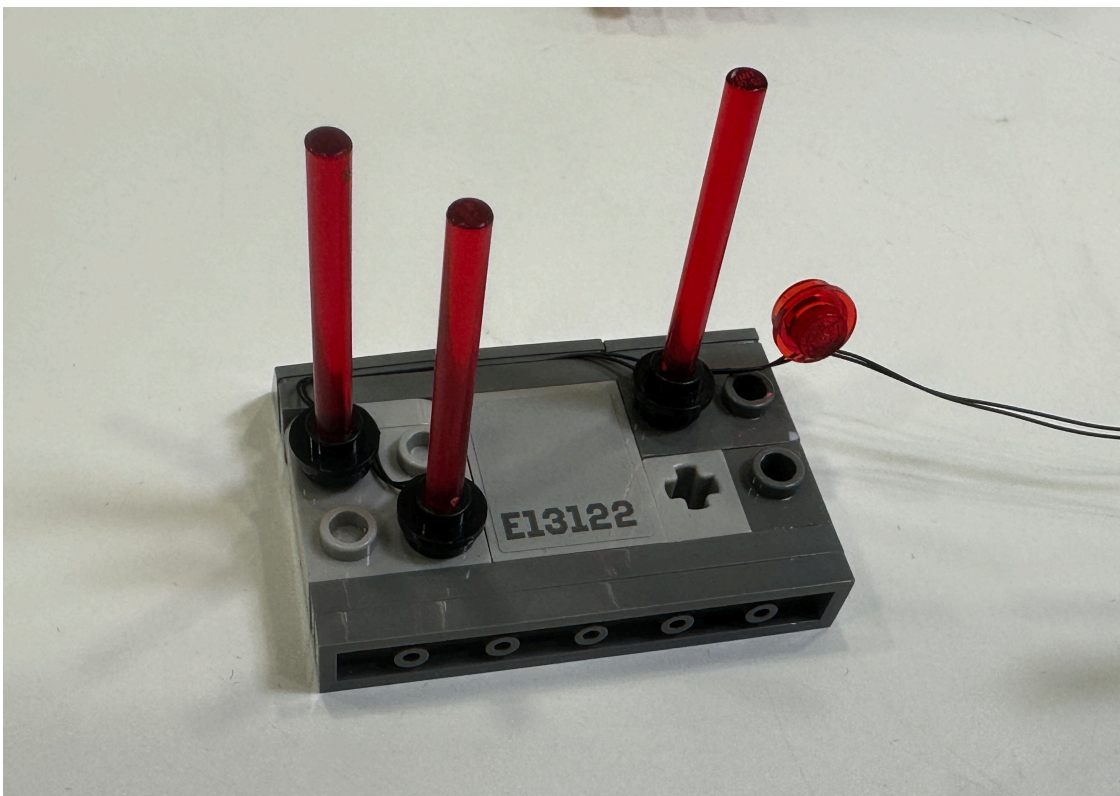

Put the 2nd floor back on top and place the lighting plate as the ceiling light

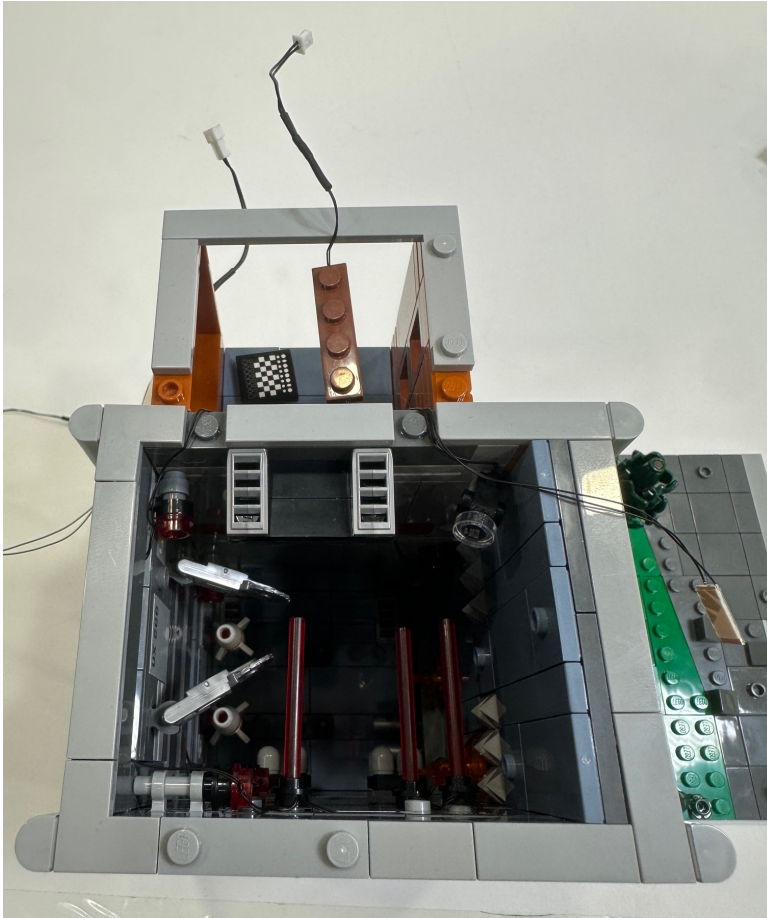

Remove the clear round tile and the clear red bars from the model to combine them with the lighting part

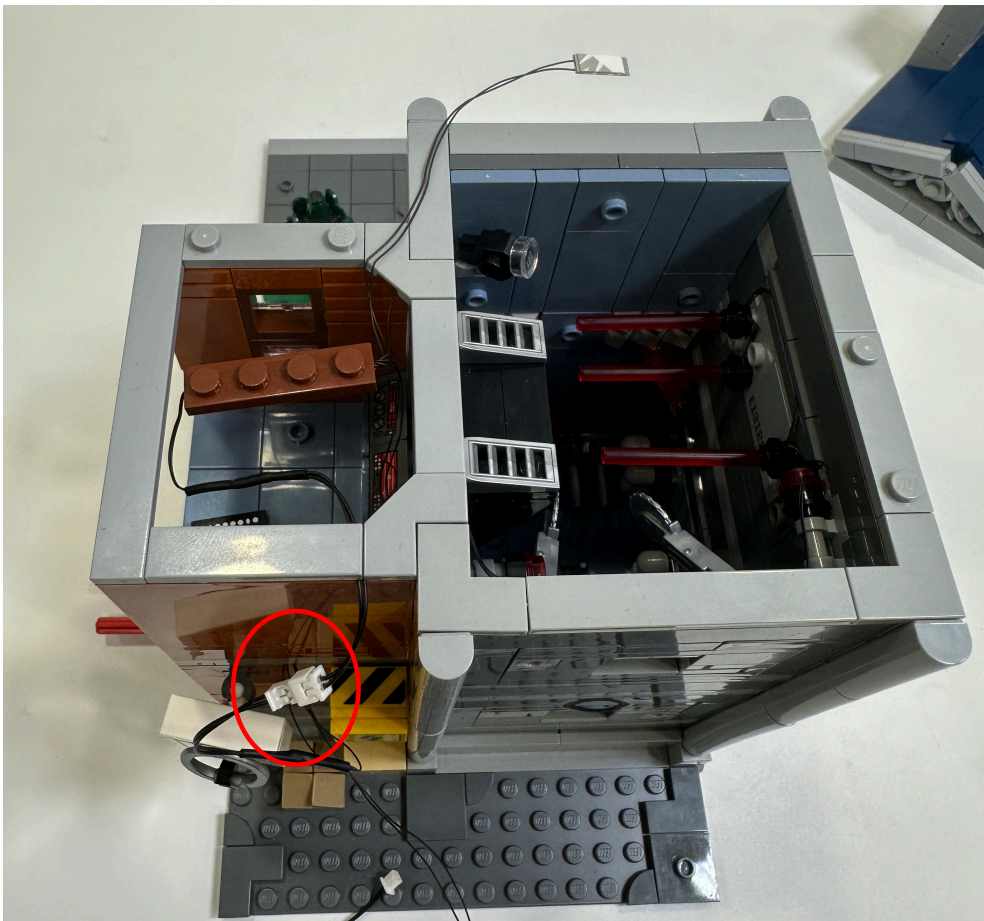

Take out a wall and place the lighting parts on it

Assemble the other lighting parts on the corners, place the lighting plate on top of the room and stable the wires by the studs same as the ground floor

Restore the tiles, connect the plugs with downstairs and place them on the back (red circle), and place the led plate outside

Put the roof on and assemble the brown 1x4 lighting plate

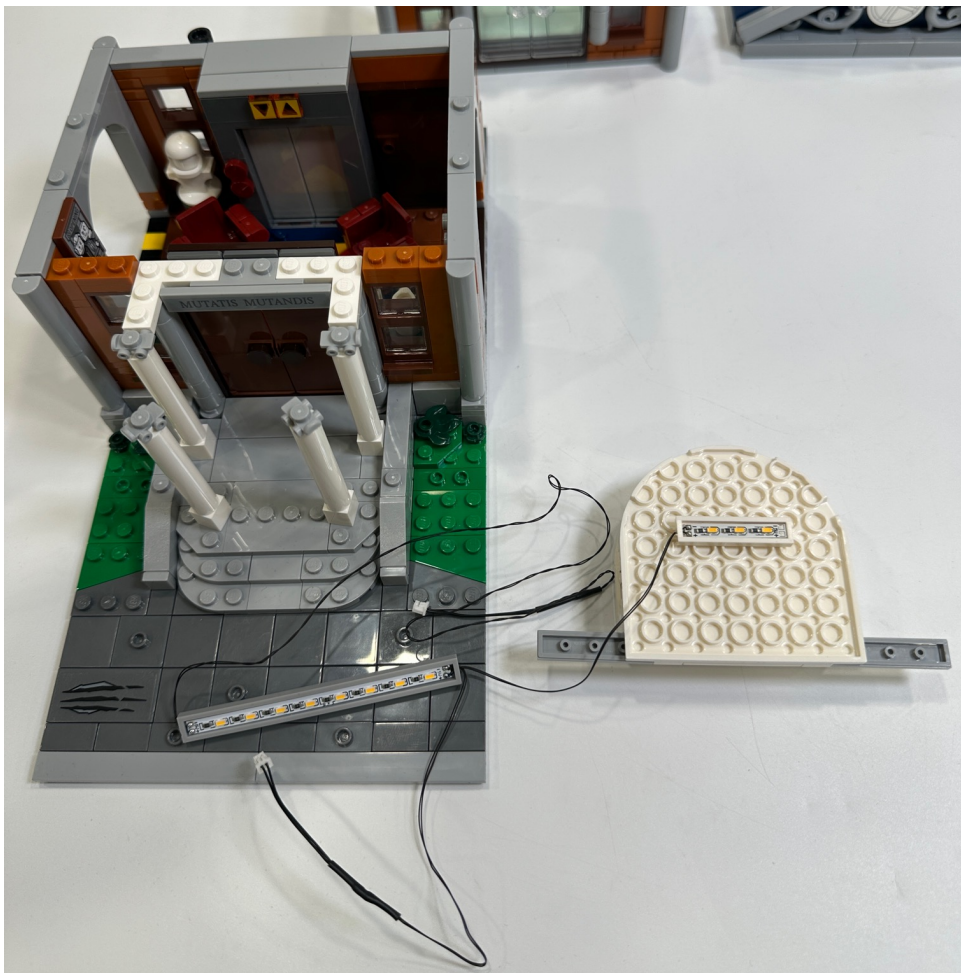

Stick the led plate as shown

Now it's turn for lighting part B, split the mansion by layer first

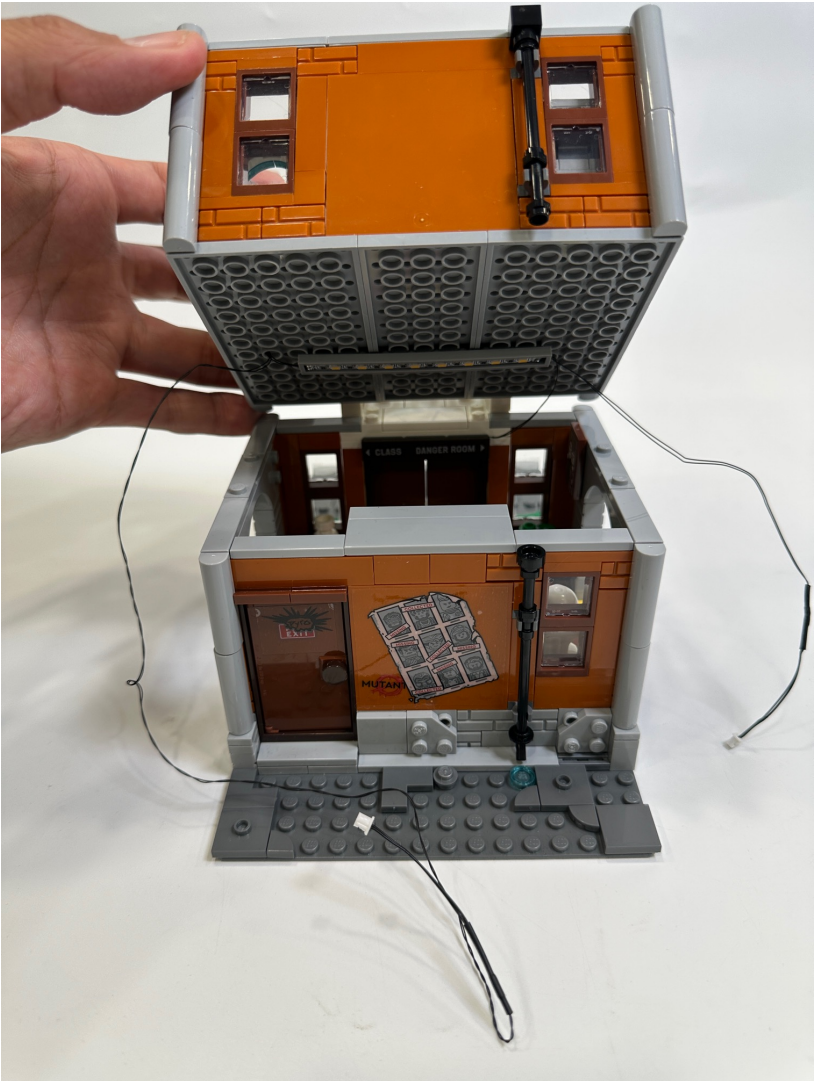

Detach the white plate from the entrance and assemble the 1x4 lighting plate as shown

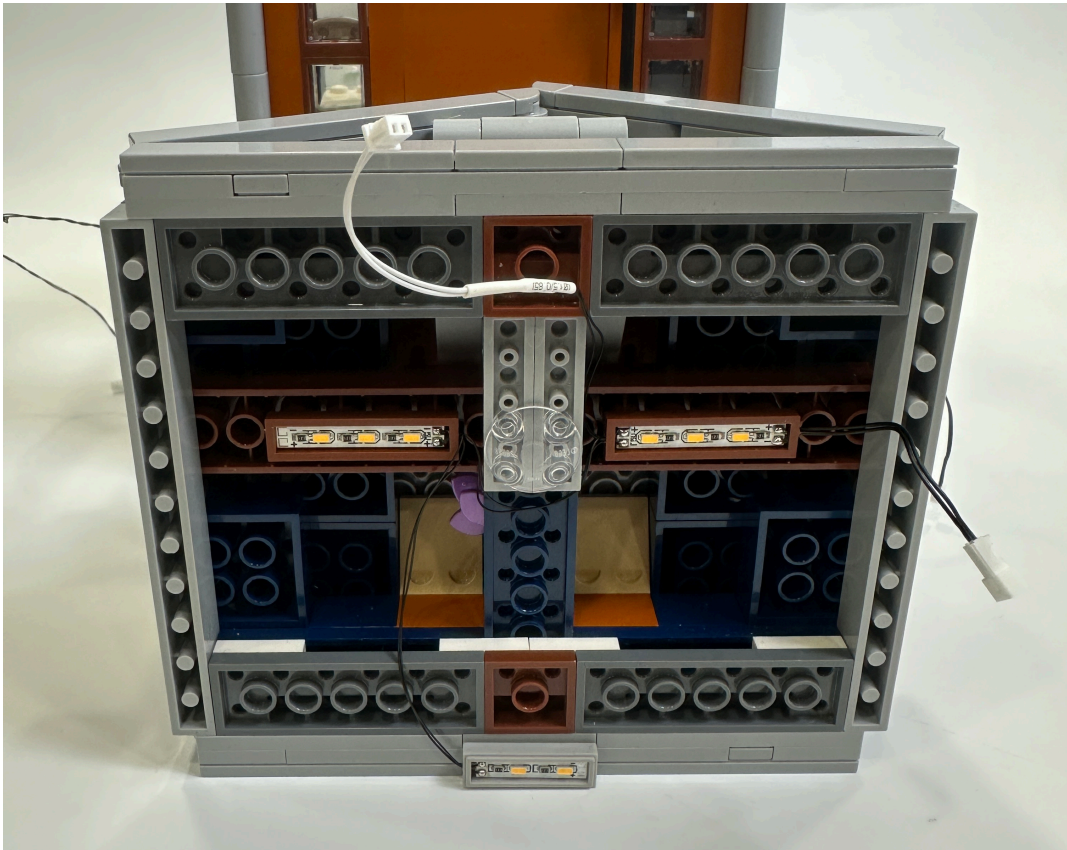

Restore the white balcony, place the wire in between the studs before combining them

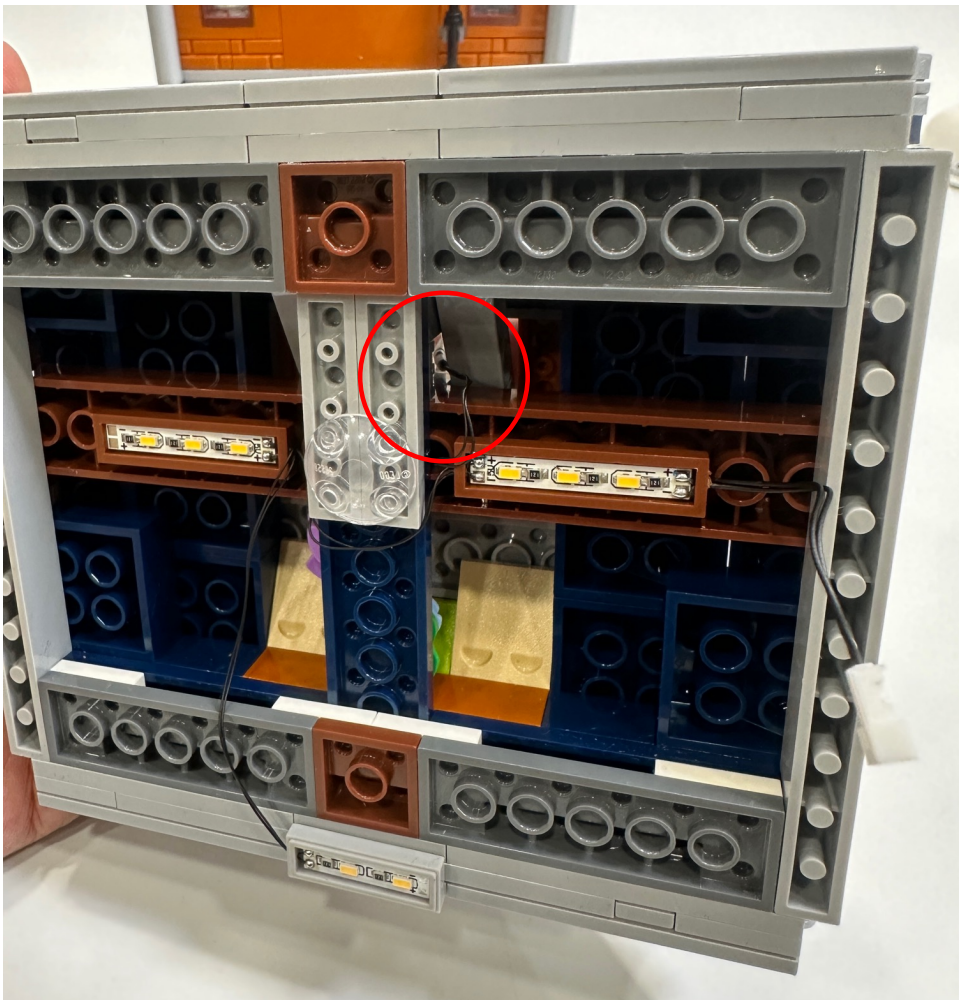

Get the 2nd floor, assemble the grey lighting plate place the wires out from the back then combine the floor

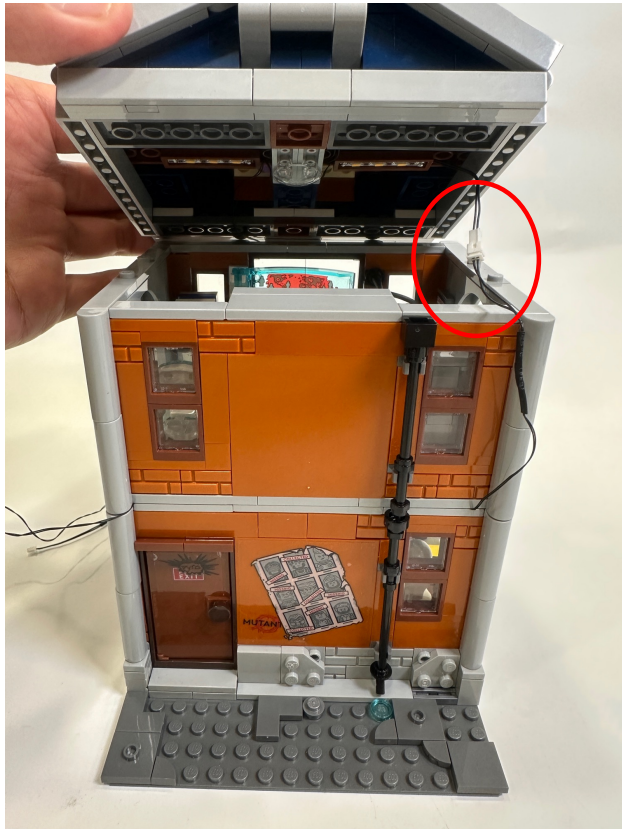

Get the roof and assemble the lighting parts as shown and stick the grey lighting tiles on the front

Move the connect with white cable through the hole in the red circle

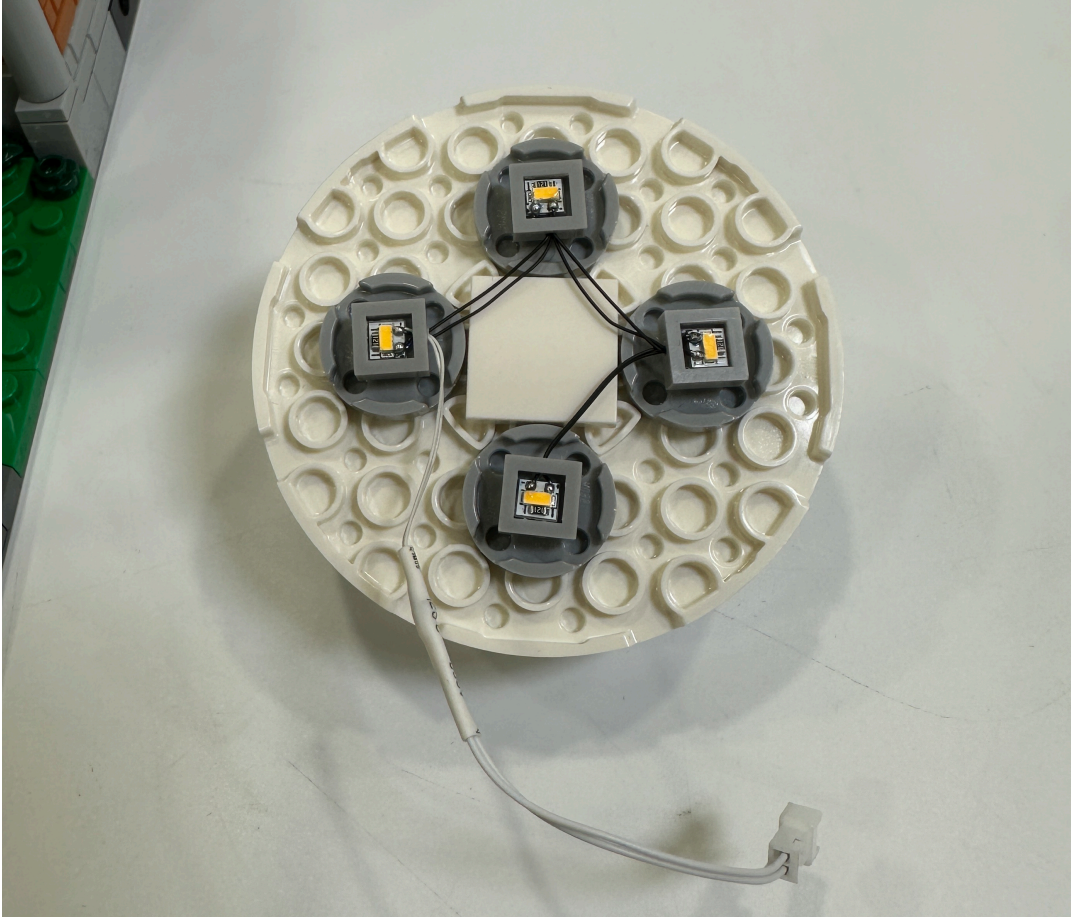

Combine the building and connect the plugs

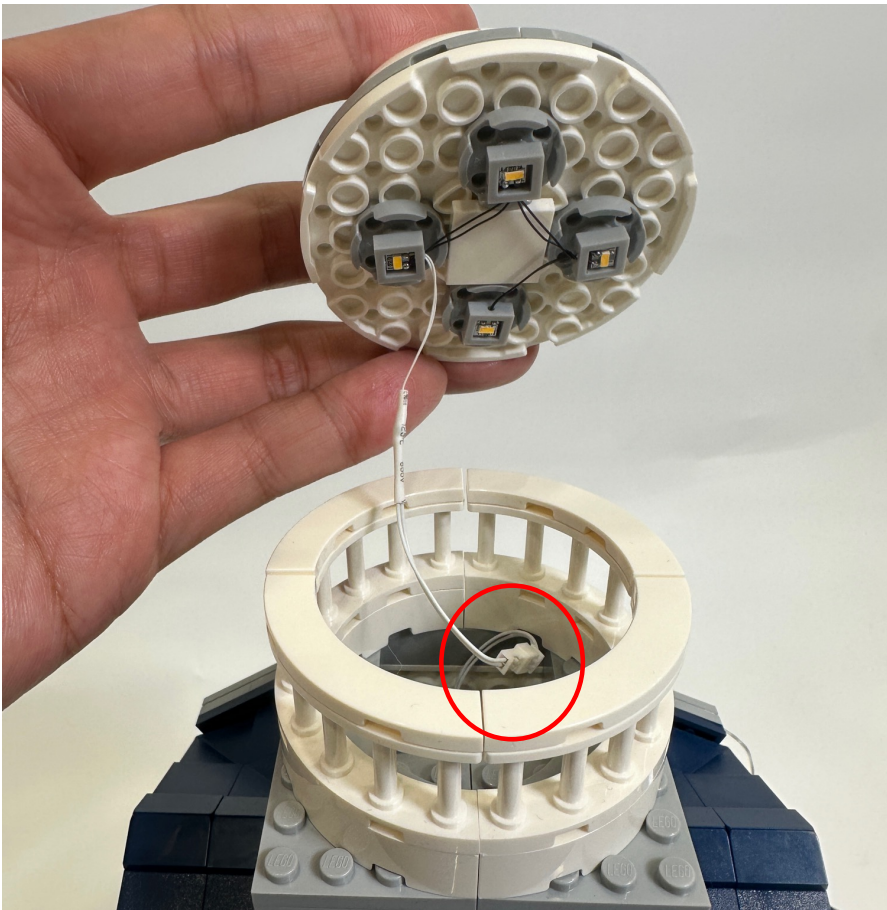

The connector with white cable would be passed through to the top

Assemble the 4pcs of 1x1 lighting plates

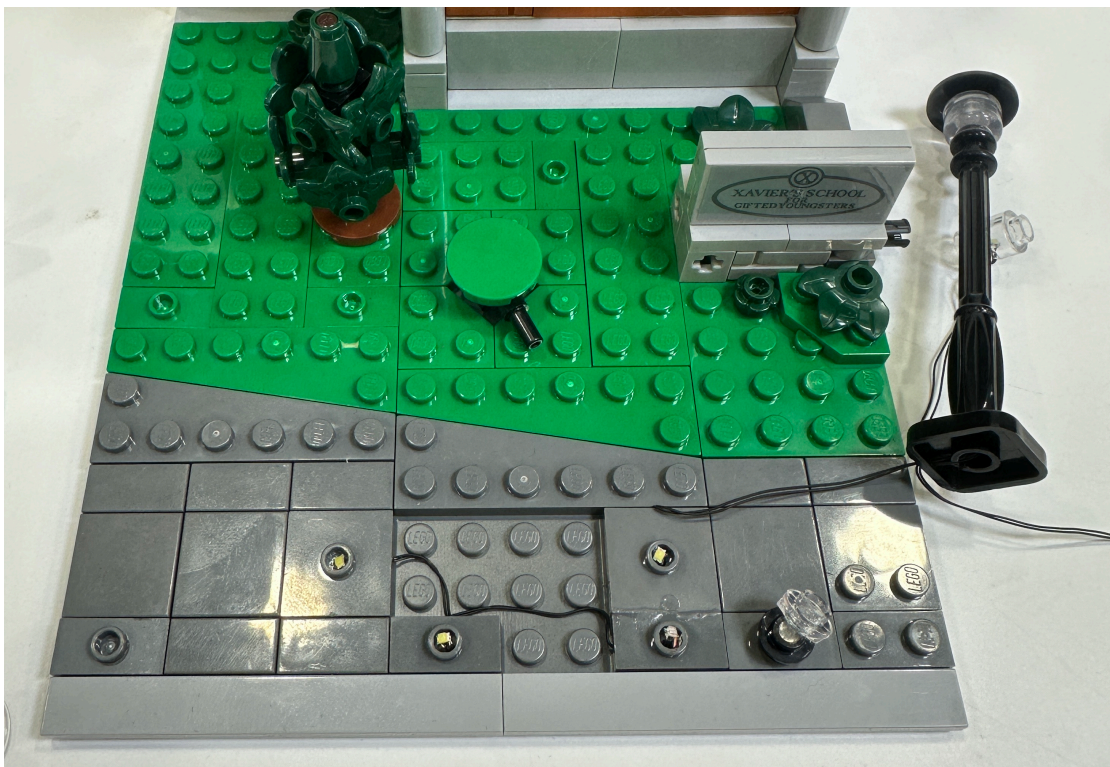

Connect the plugs then put the top back on the mansion

For lighting part C, the one with lamppost would be assembled outside of the mansion
Start by detaching the parts and tiles on the ground as shown

Assemble the lighting parts as shown, the wire must be placed in between the studs

Now you can restore the parts on it

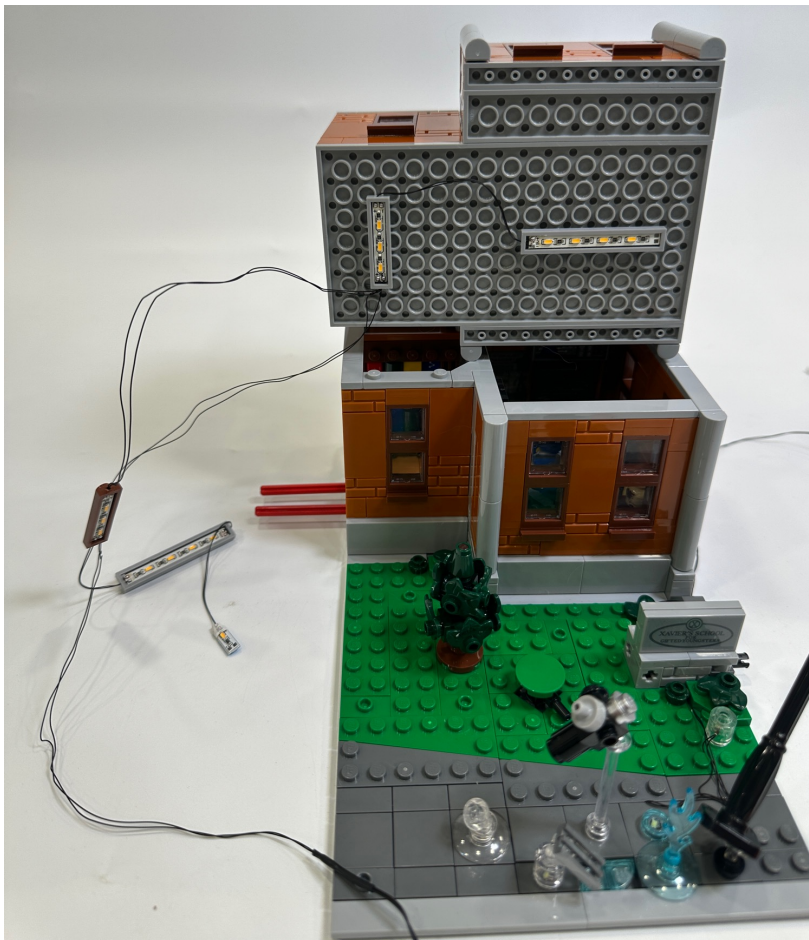

To avoid breaking the cable, please assemble the lamppost on the corner instead of the hole in the middle

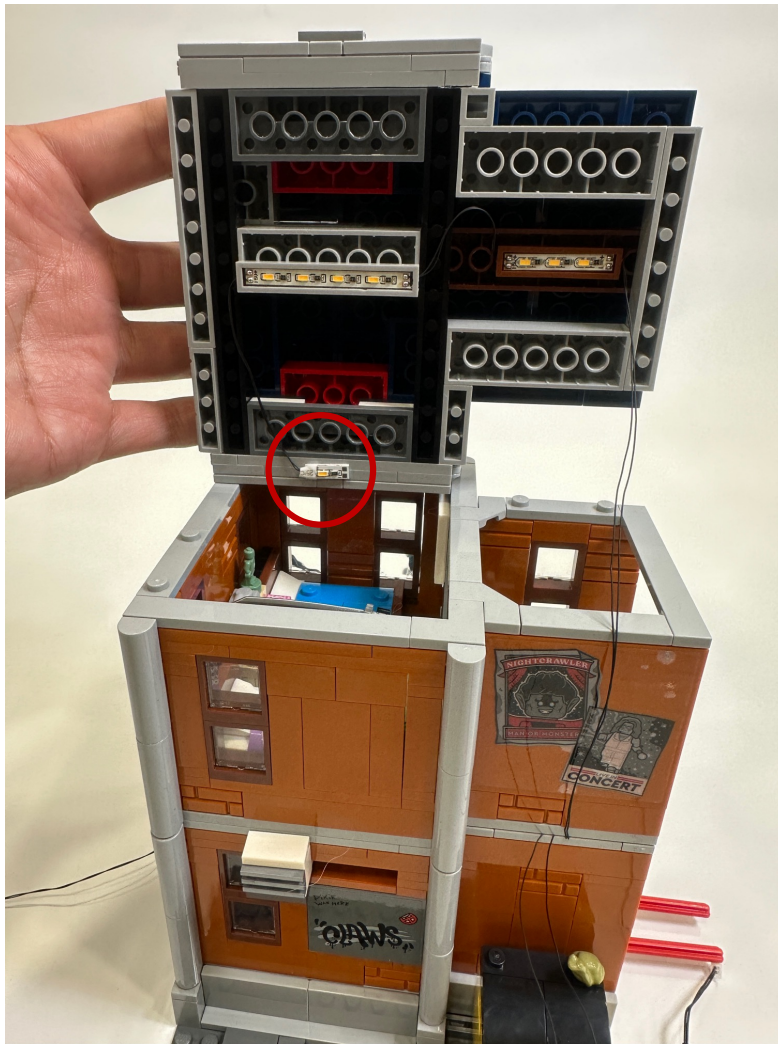

Place the wire in between the studs and move the connect to the back

Lift up the 2nd floor and assemble the lighting plates as shown

Move the remain lighting parts to the top floor, assemble them as shown and stick the led plate (red circle)

Place the wire at behind and the lighting part C is finished assembling

At last, combine the whole mansion and connect all four connectors with the USB cable then you may light it up
