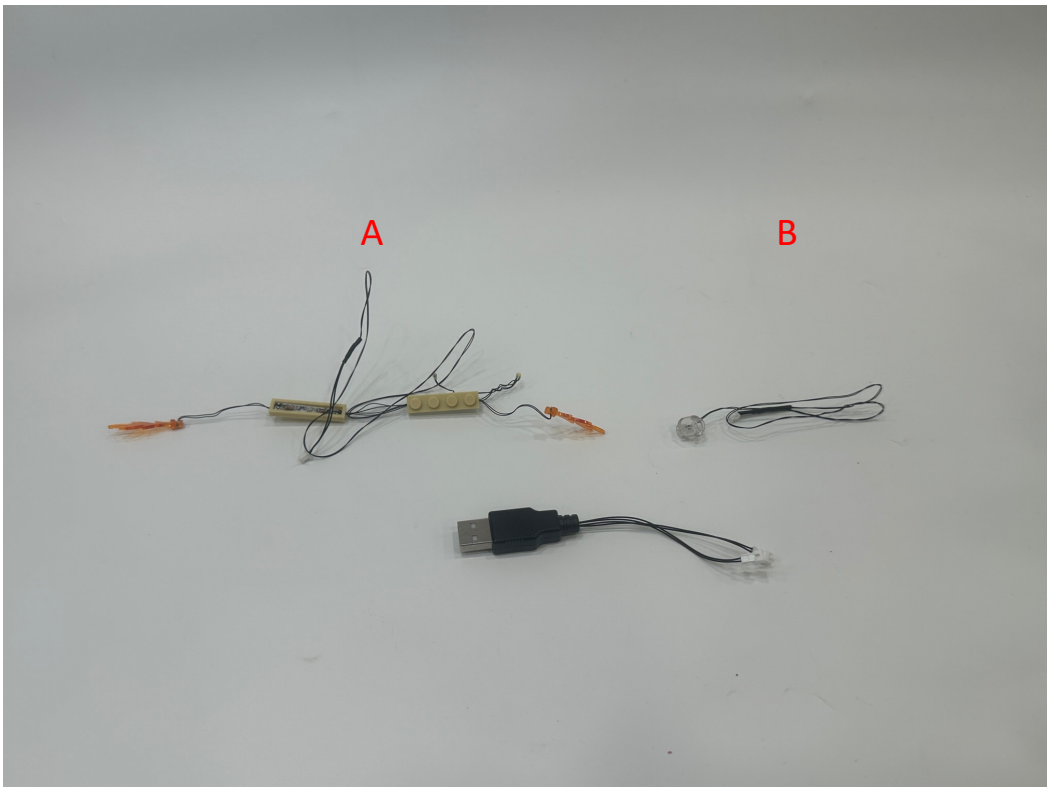
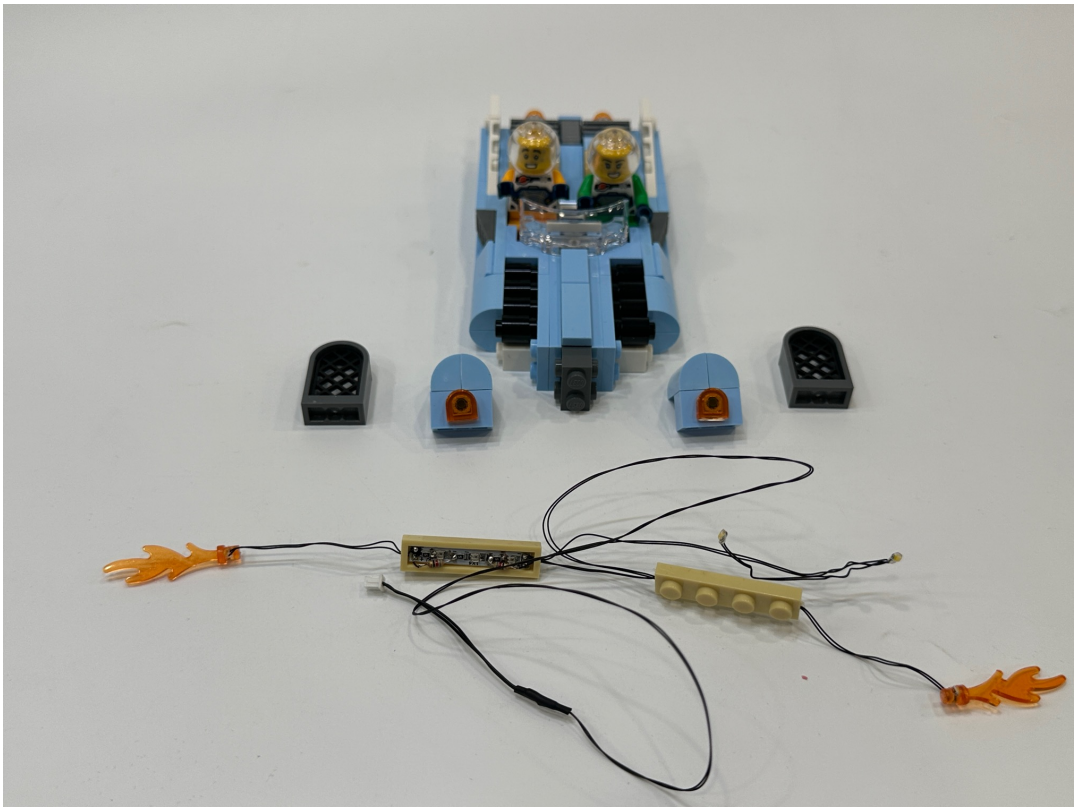
Lego 40789

Flying Moon Car

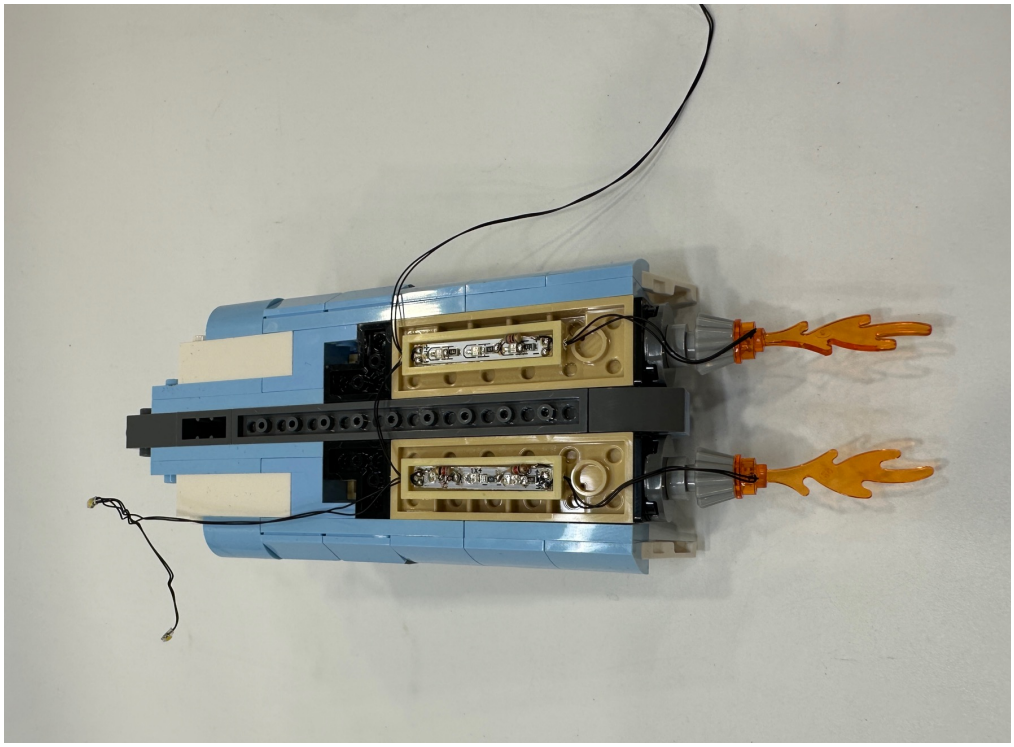
Installation Guide



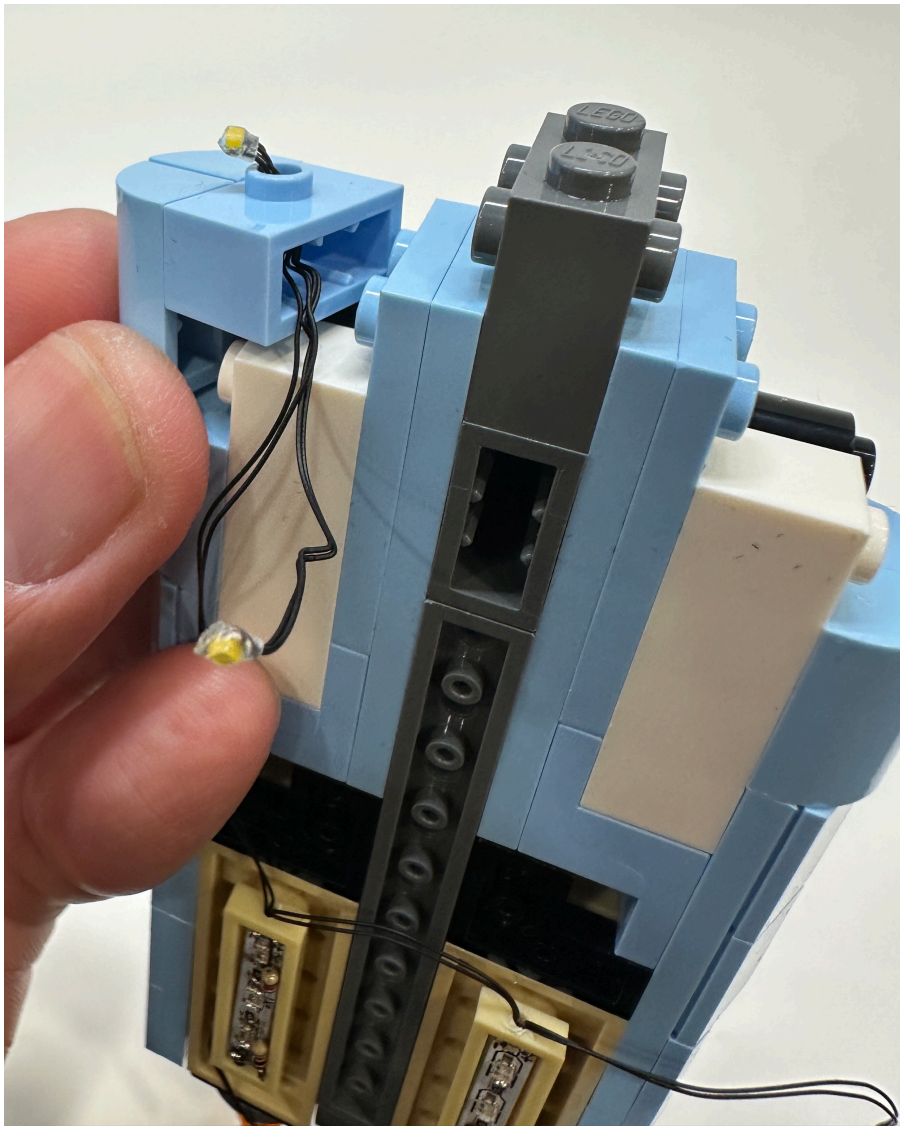
Detach the head parts from the car to assemble lighting part A to it



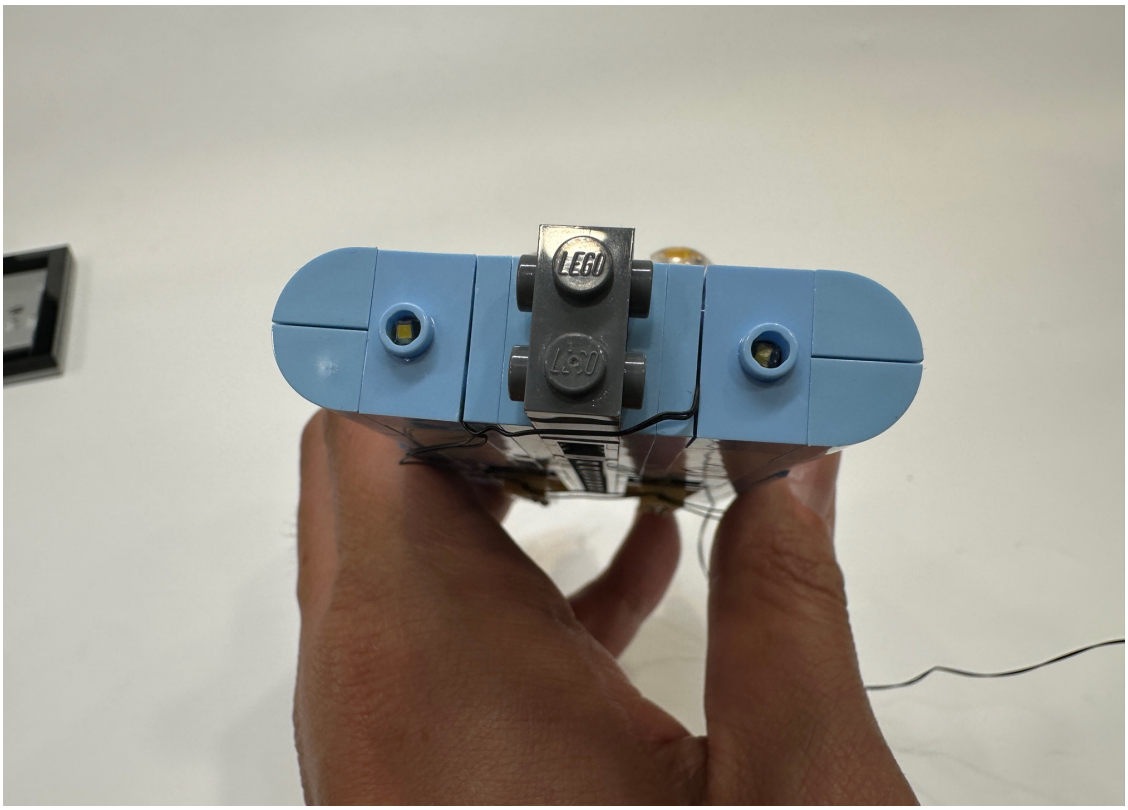
Replace the fires at the back and assemble the tan lighting plates at the bottom



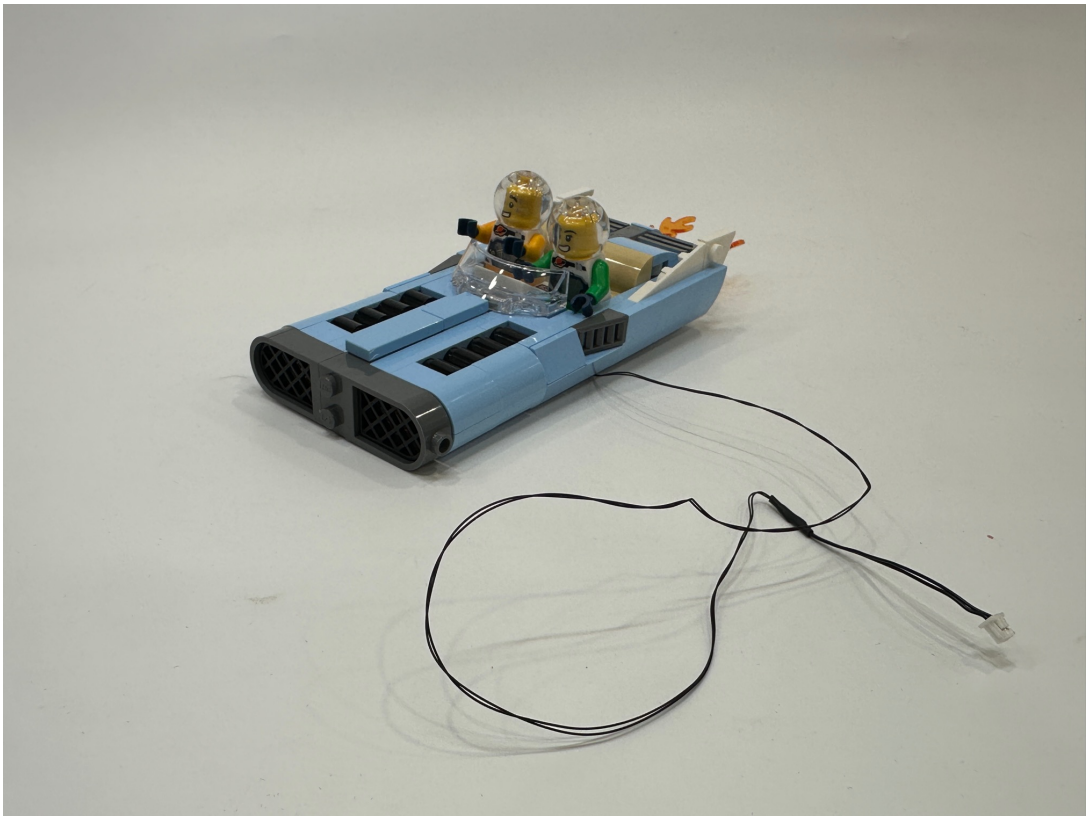
Place the led bulbs to the front, put it through the hole of the blue brick as shown



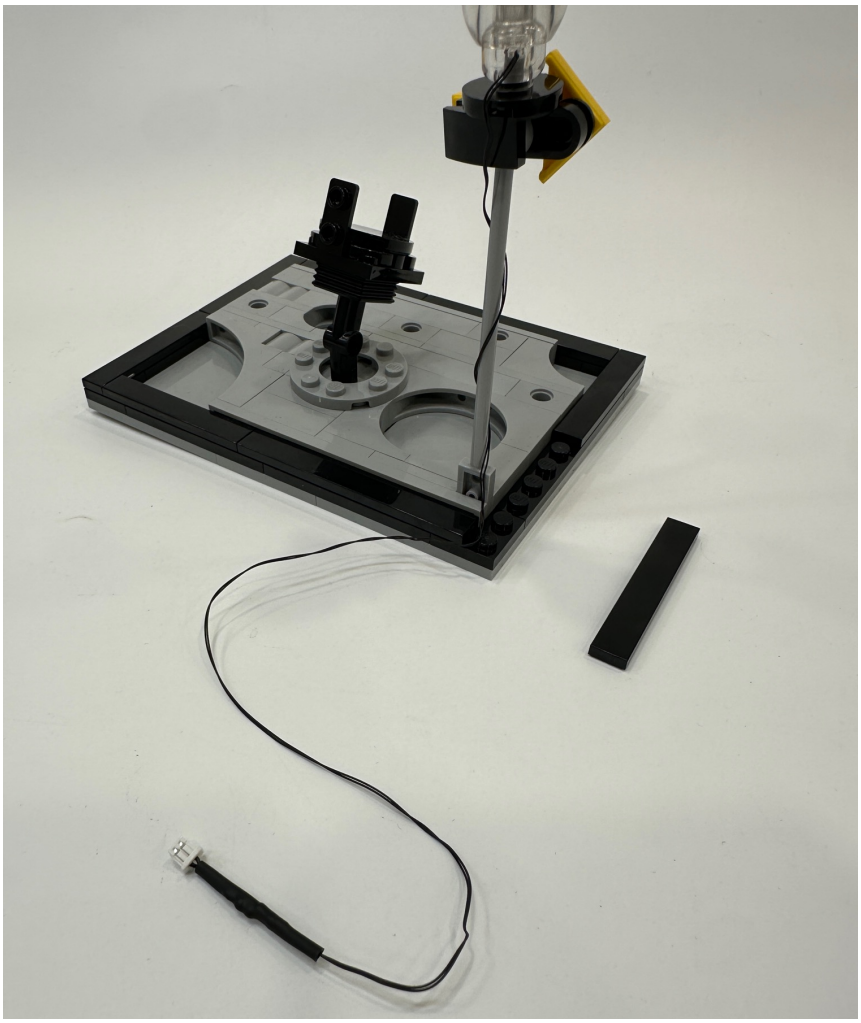
Restore the blue bricks after the bulbs are placed inside the holes, beware the wires have to be placed in between the studs when restoring the bricks otherwise the wires would be damaged

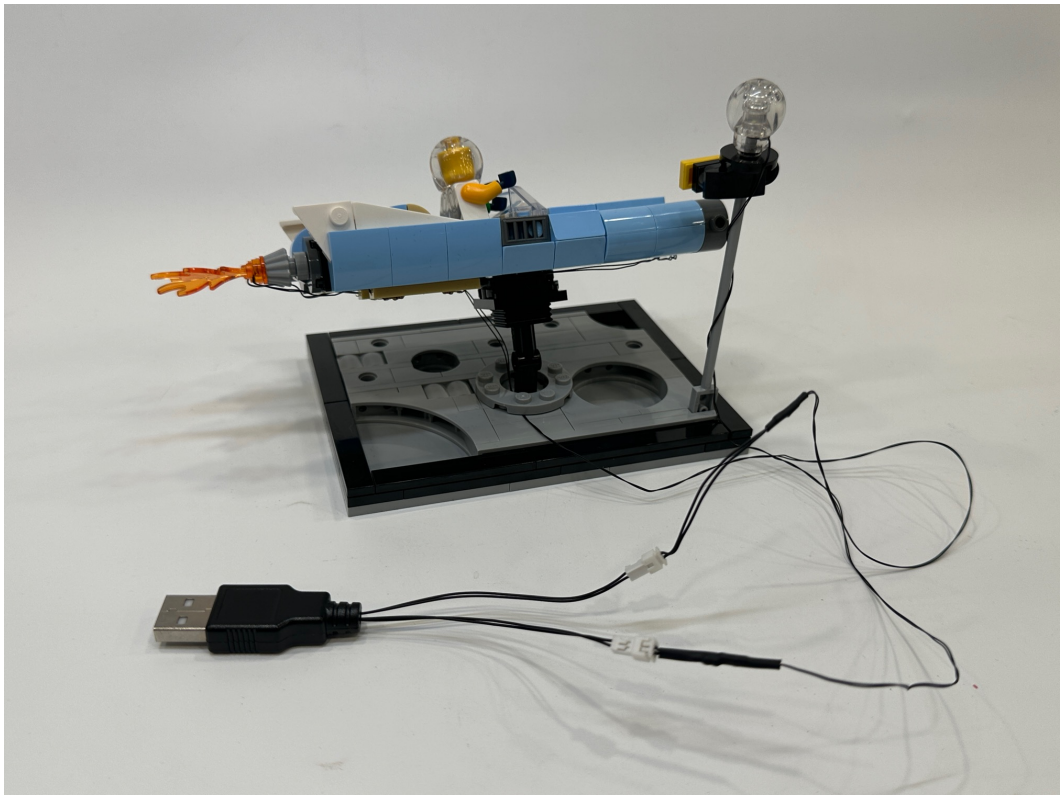


Restore the parts of the headlights then lighting part A is completely assembled



Replace the clear head part by the lighting part B and place the wire at behind of the pole





Put the flying car back on the stand and connect two connectors with the USB cable
