

Lego 10284

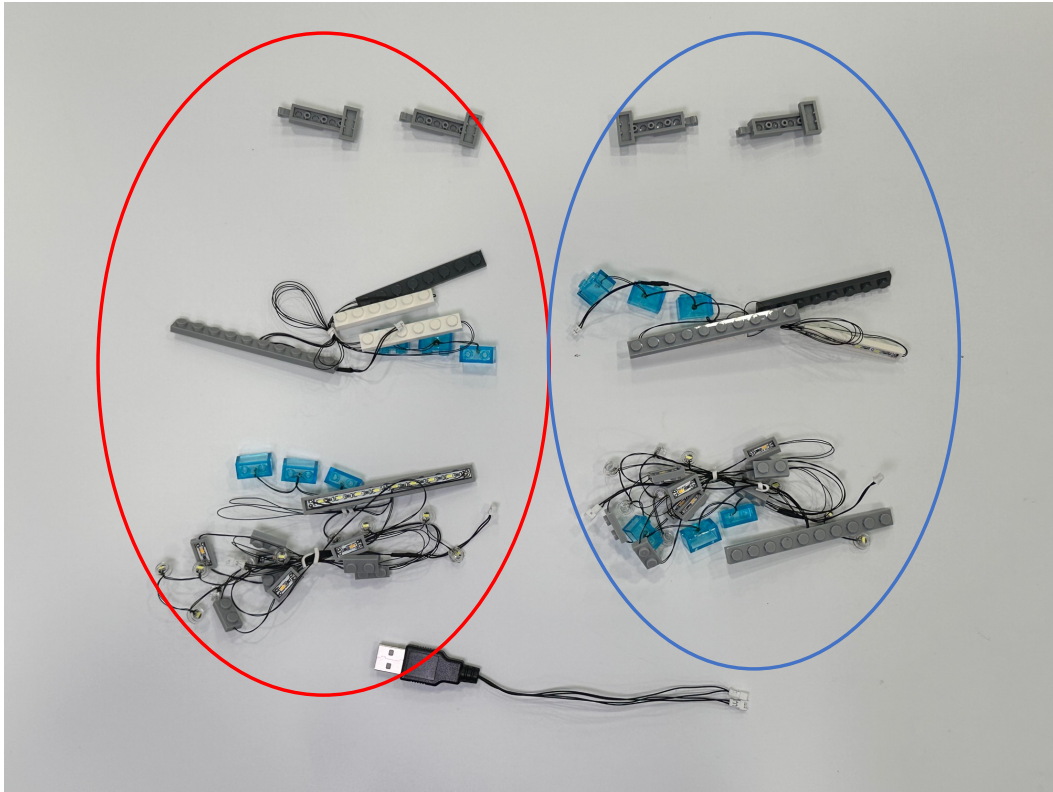

Camp Nou

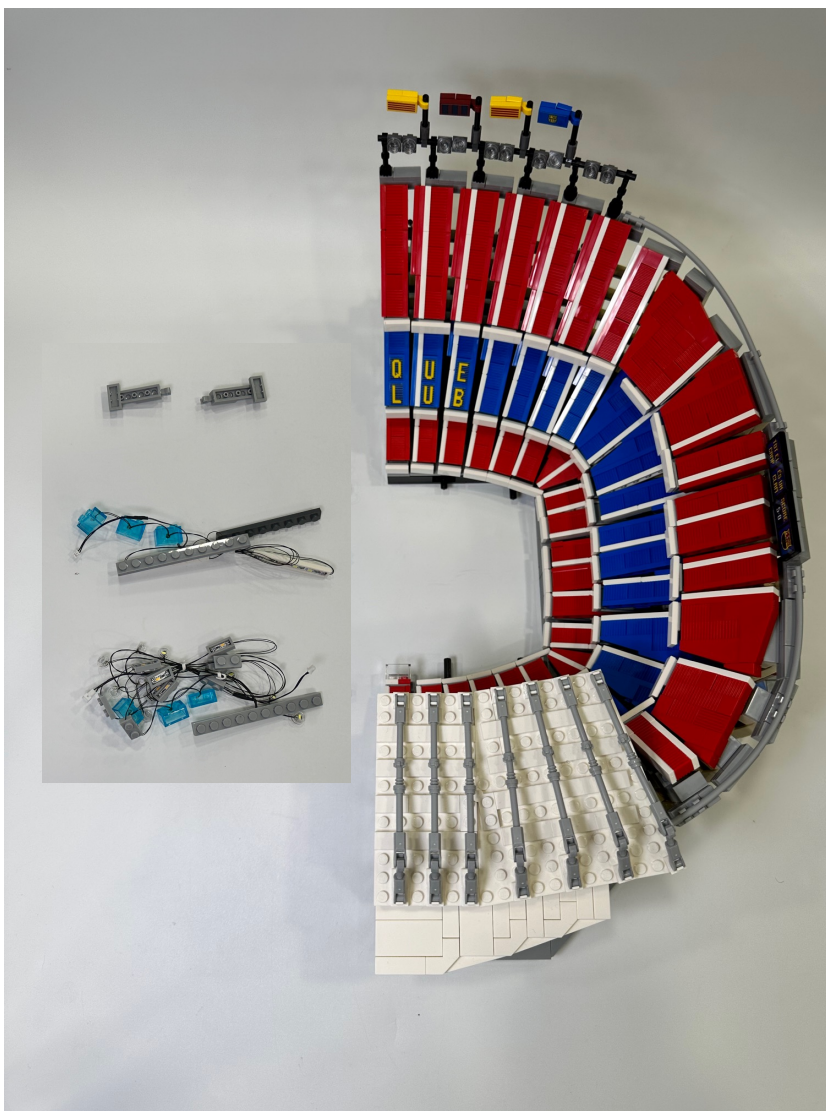

Installation Guide

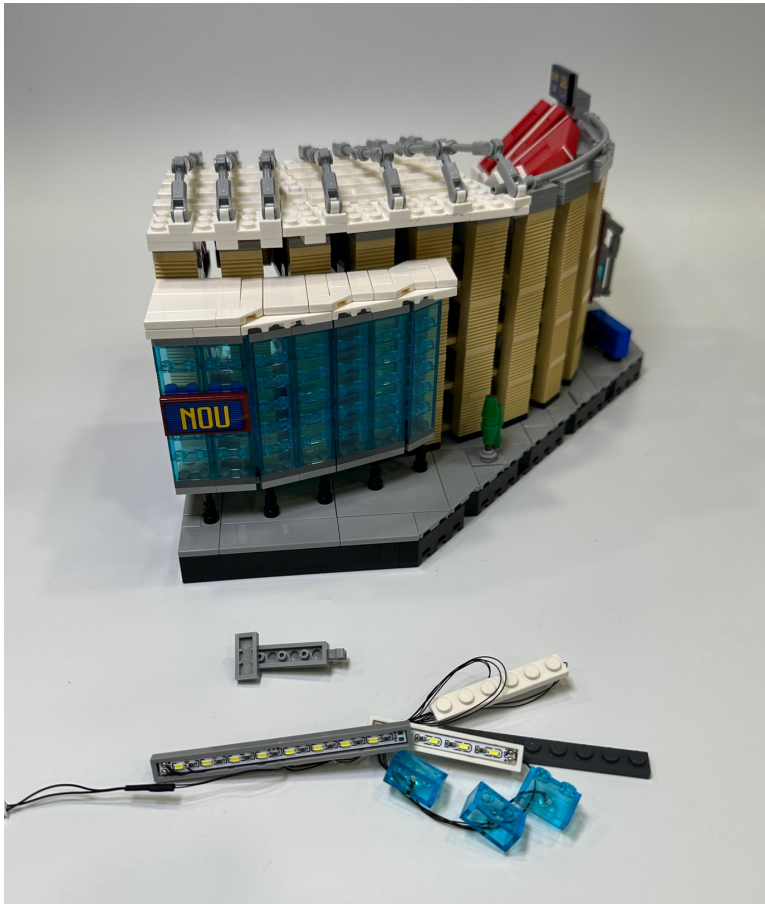

This lighting set is formed by two pairs of identical lighting parts
The pair in red circle are exactly same as the one in blue circle

Pick any pair of the lighting parts to assemble it on any half side of the stadium
The half side of the stadium means the combination as shown

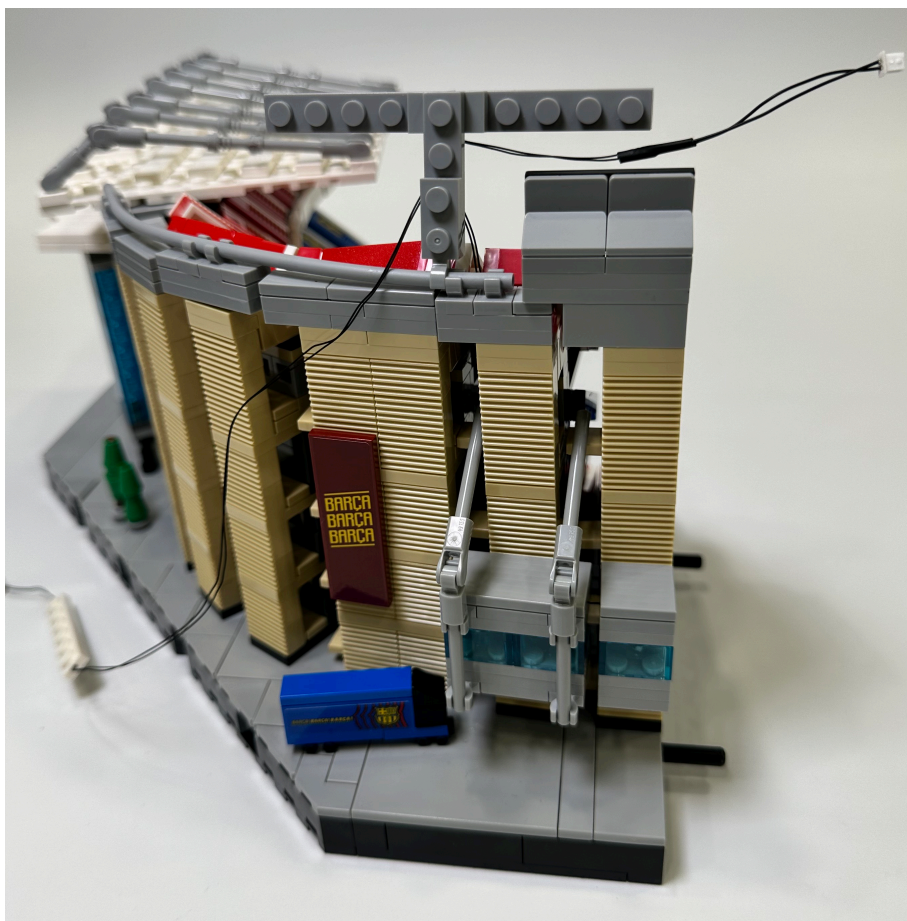

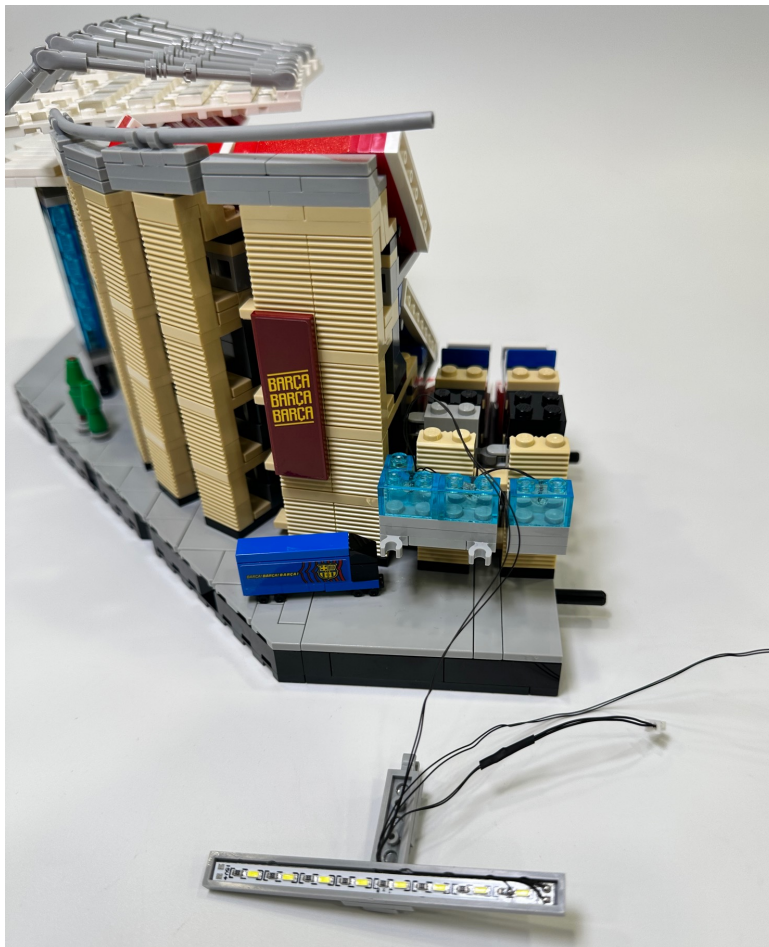

Take the lighting part with long dark grey lighting plate for the first $\frac{1}{4}$ side

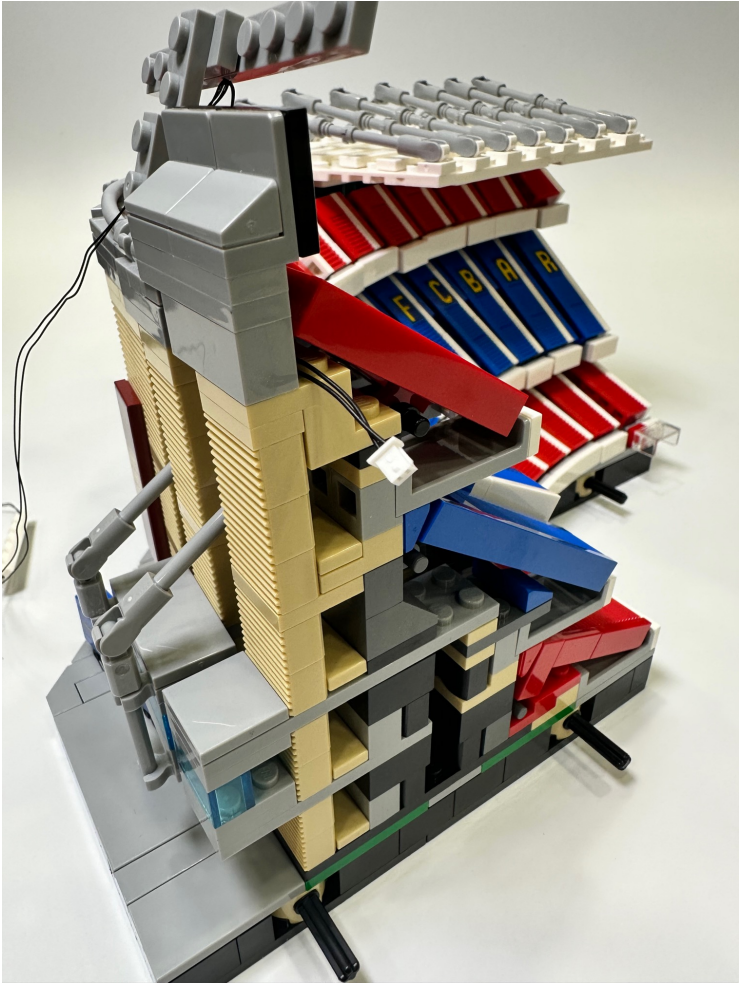

Detach the shown parts at the edge and the clear blue 1x2 bricks would no longer be needed

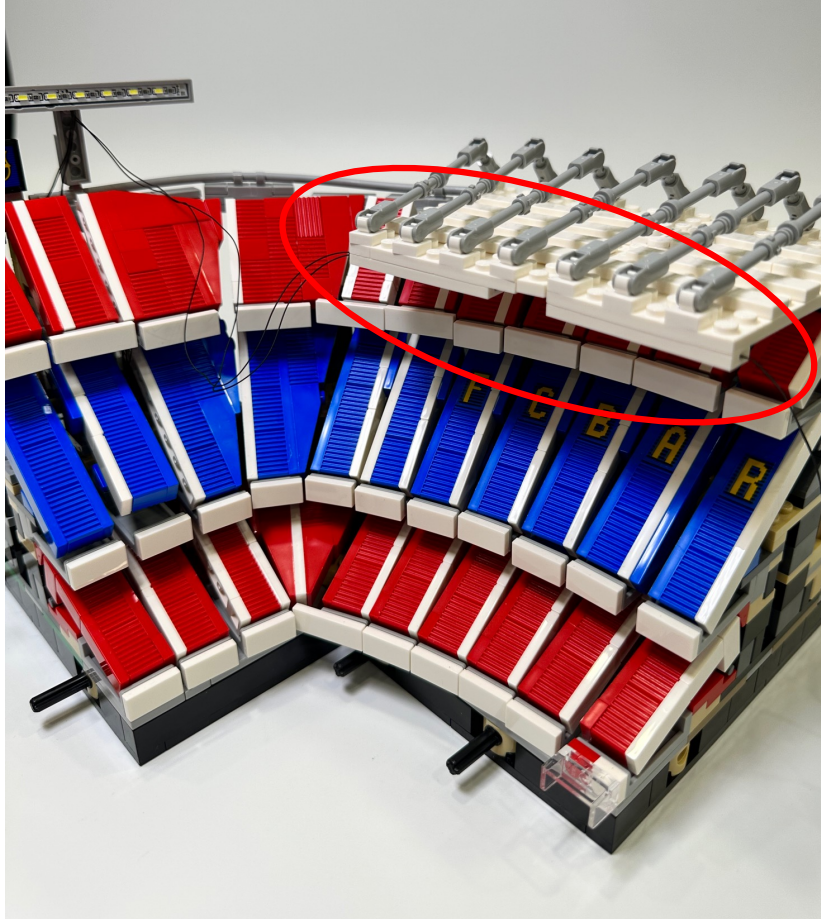

Assemble the lighting 1x2 blue bricks to replace the bricks removed
And combine the grey parts attached with the light grey 1x10 lighting plate to
assemble it at the bar

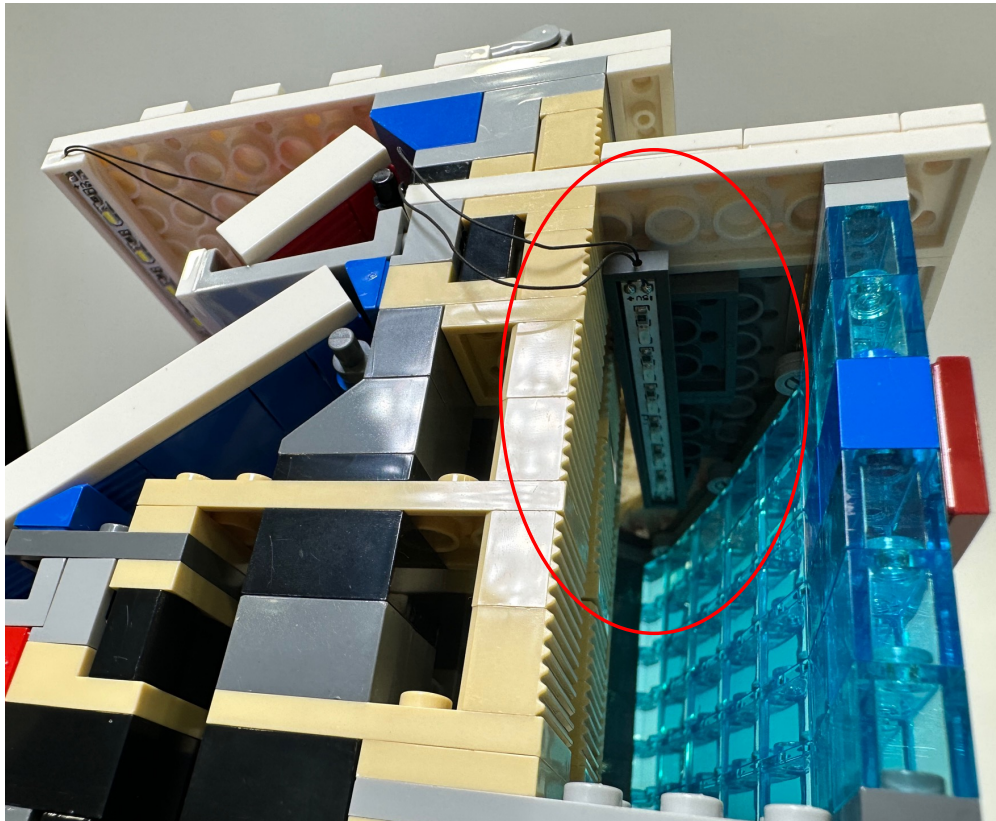

Hide the wire attached with the connector, just pop the connector out

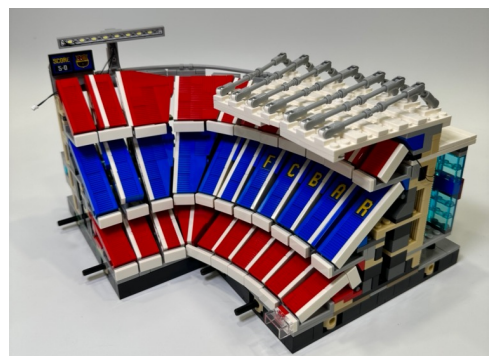

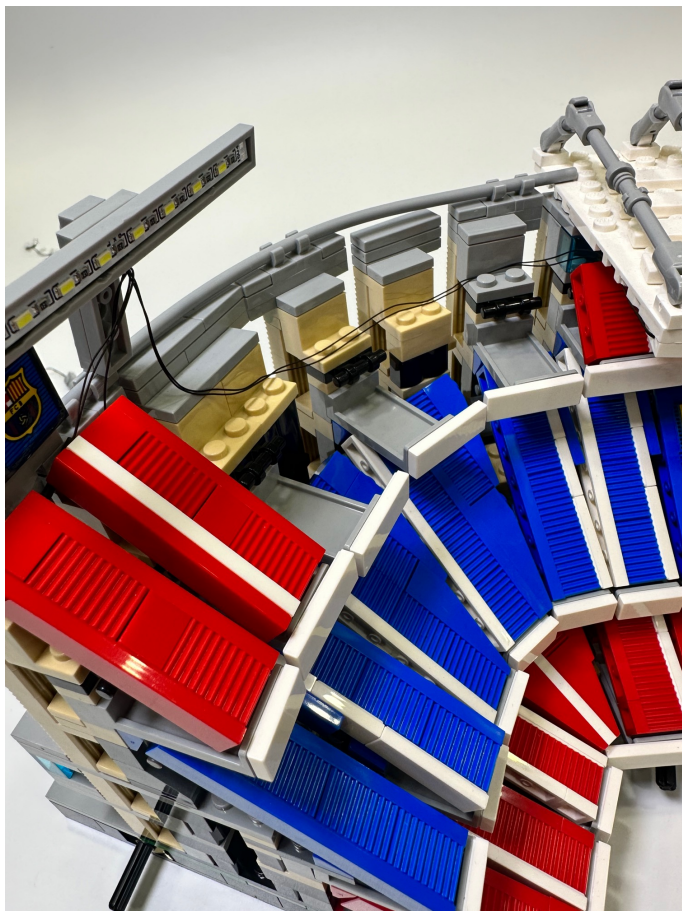

Then assemble the white lighting plates as shown

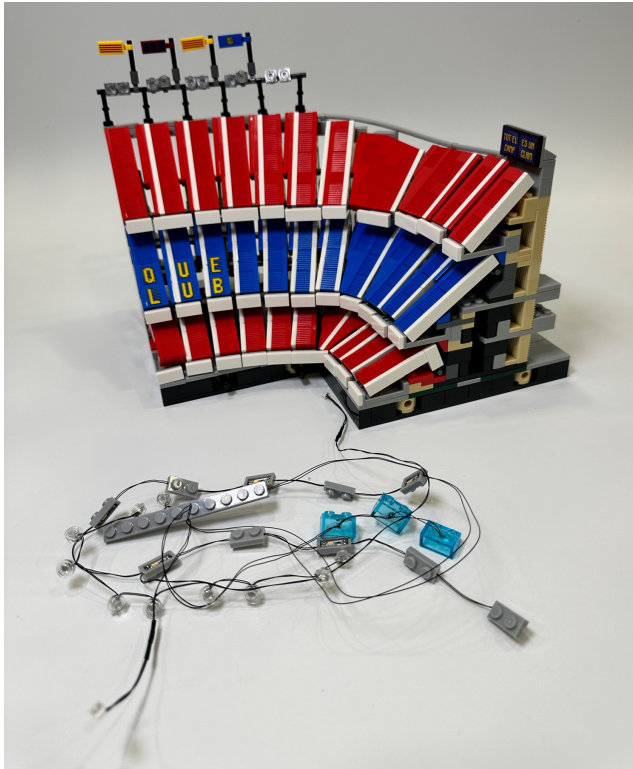

The remain dark grey lighting plate would be placed behind the big window

Remove the red seats to hide the wires in between the lighting grey and white lighting plates, restore the seats after the wires are settled then this part is done

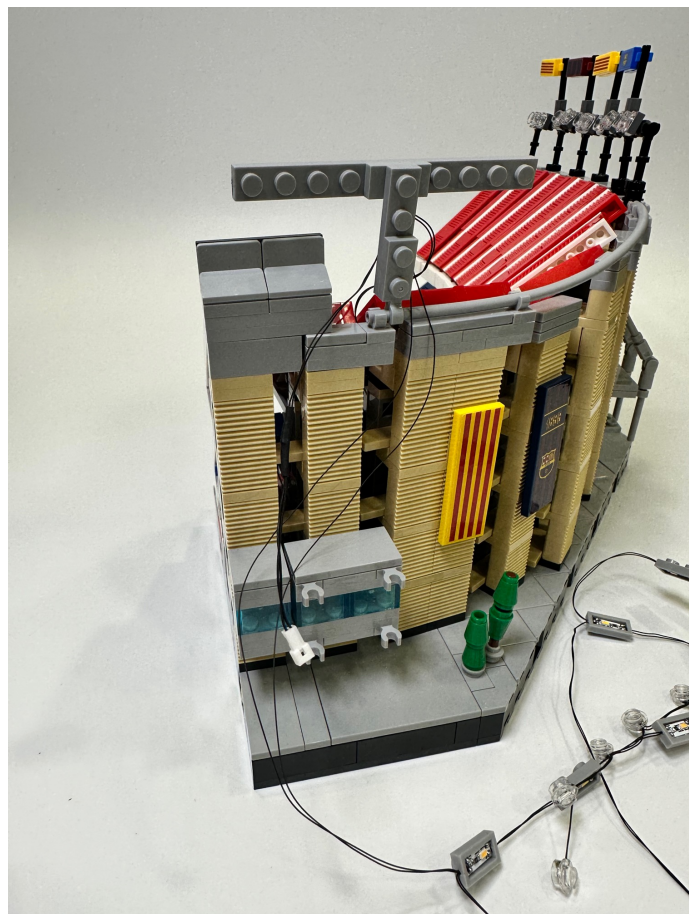

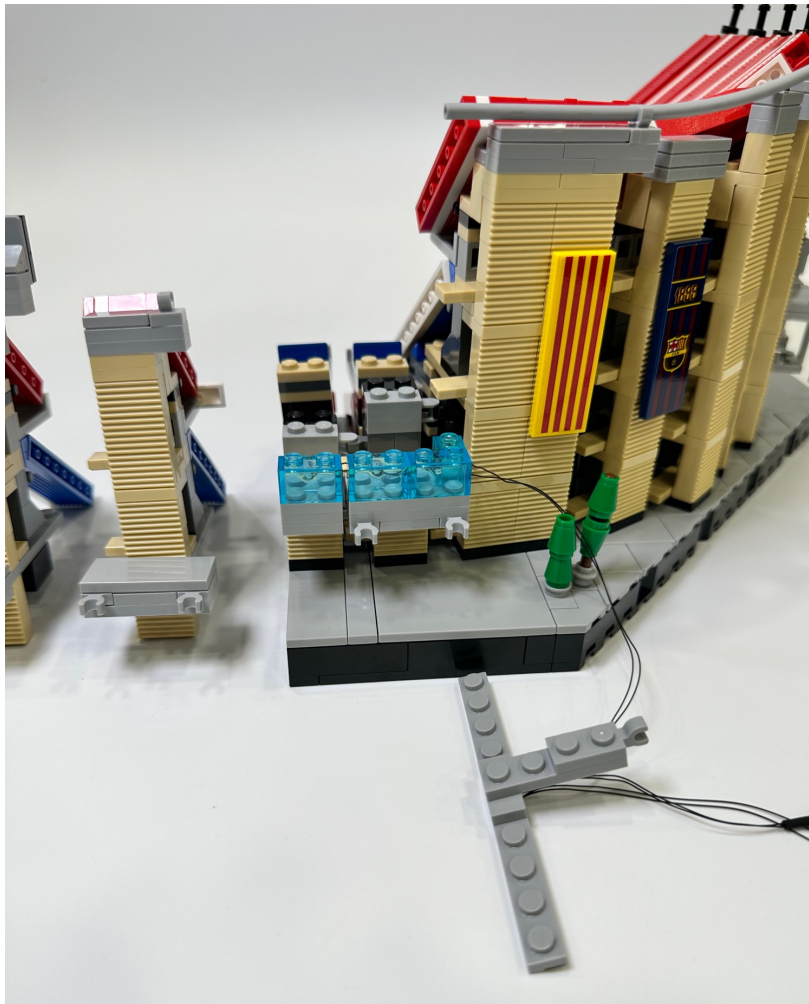

Now assemble the other side

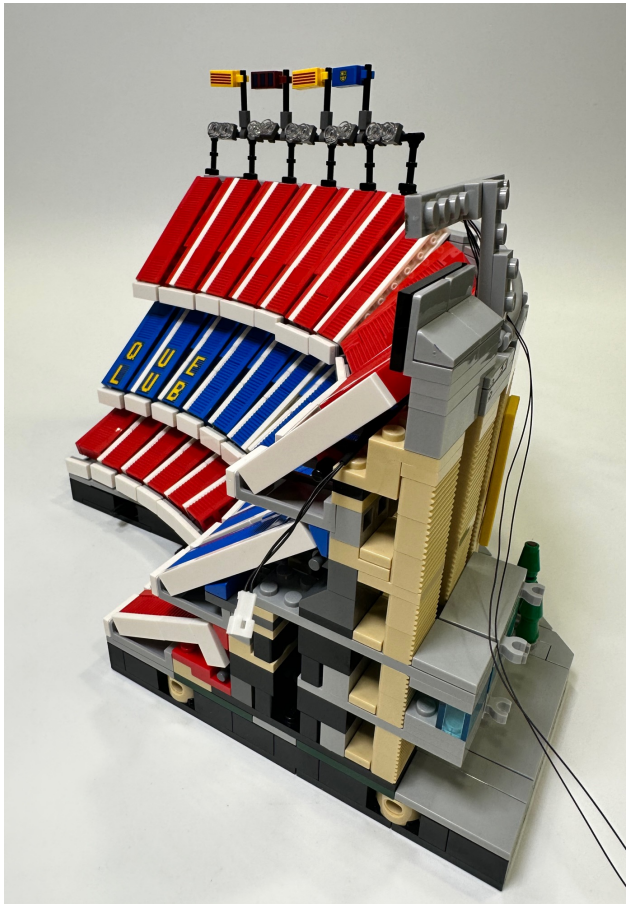

Similar to the previous part, detach the shown parts and take the blue bricks away

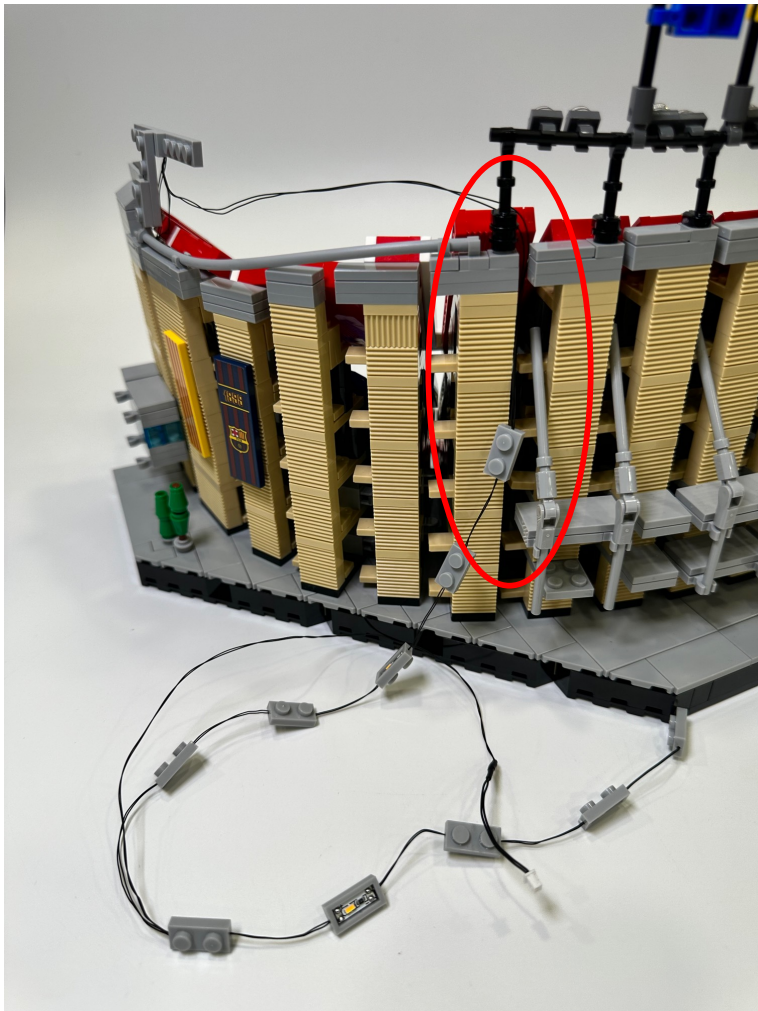

Replace the blue bricks by the lighting bricks and combine the grey clip and lighting plate and assemble it

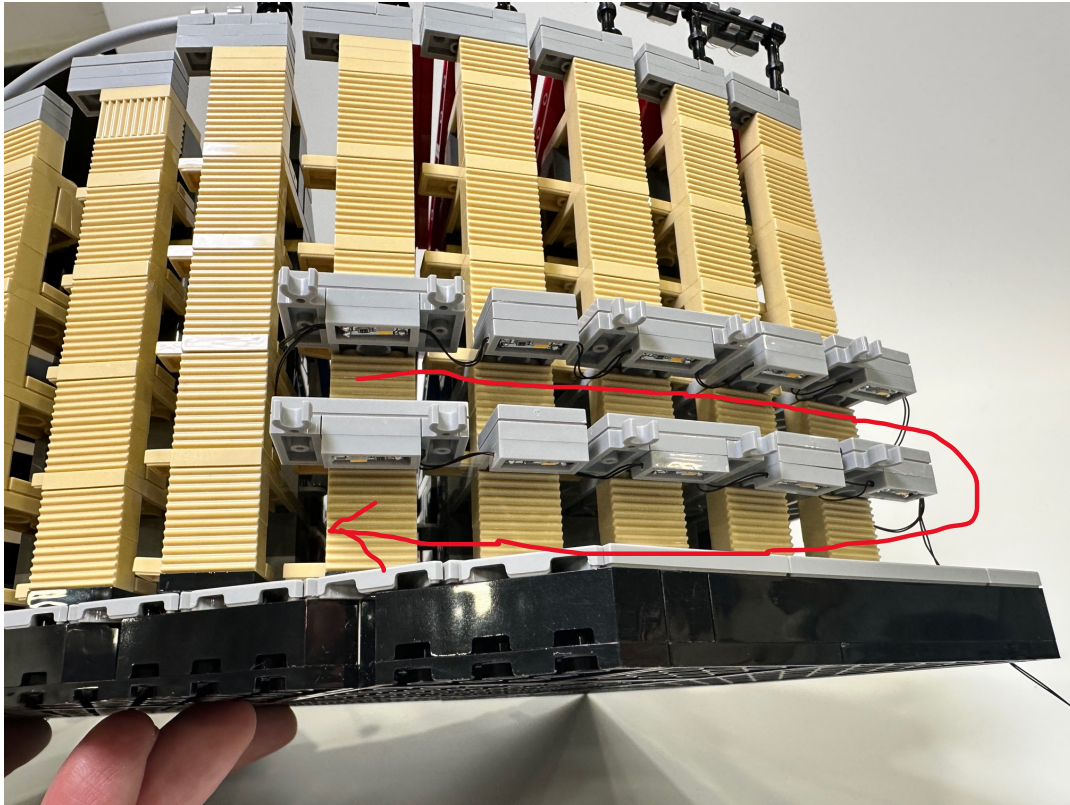

Again, hide the wire under the seats, only pop out the connector

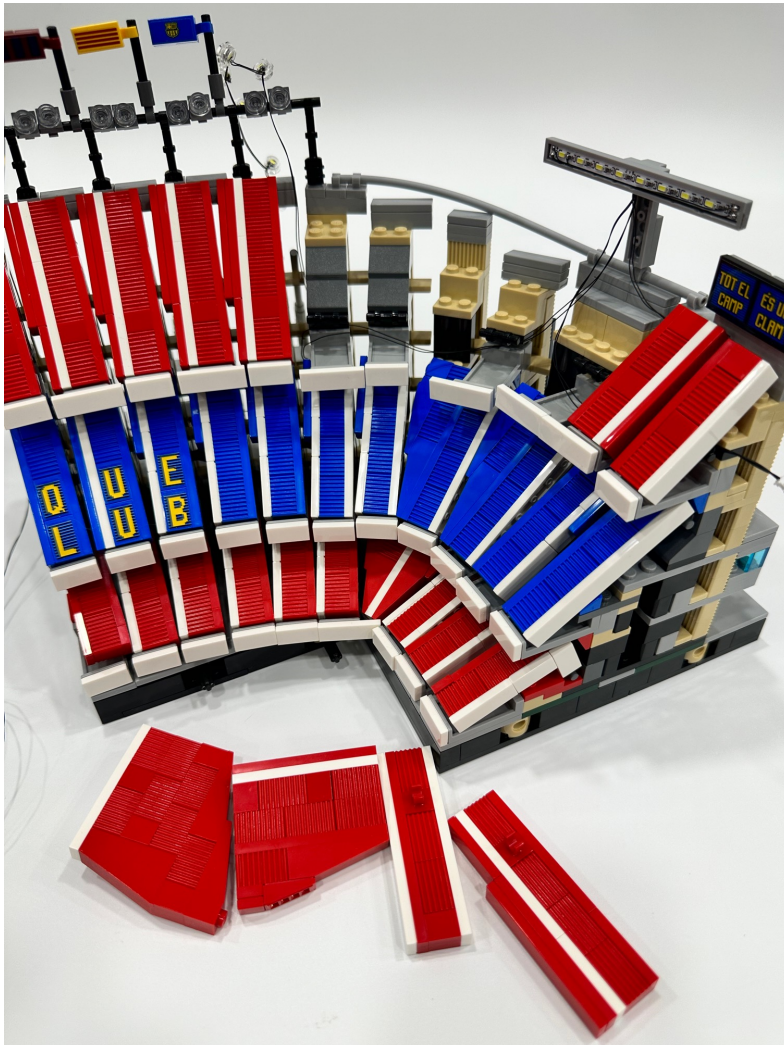

Stay the clear lighting round plates inside and the 10pcs of 1x2 grey lighting plates would be moved to outer wall of the stadium

Assemble the 1x2 lighting plates as shown
The order should be followed by the arrow

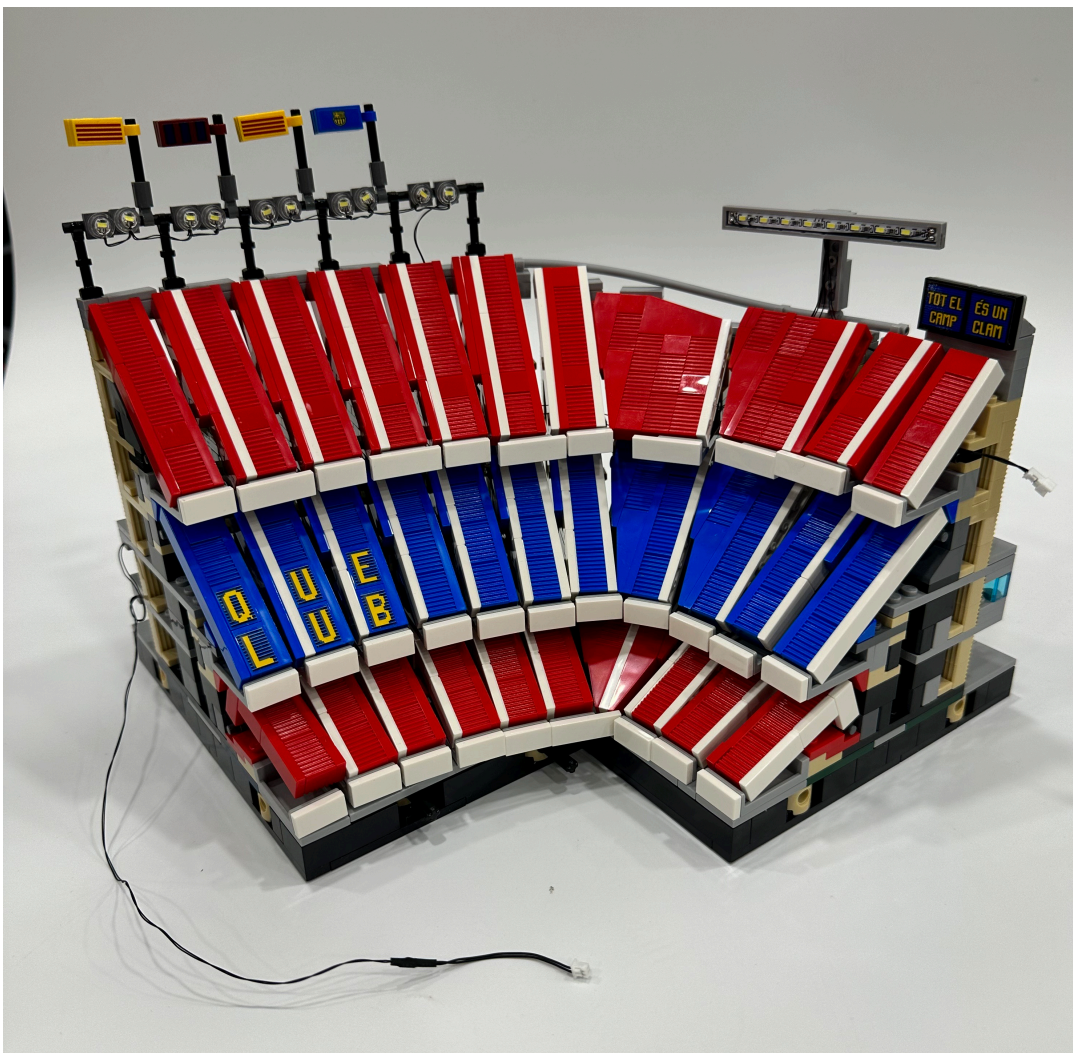

Remove the seats to hide the wires coming out from the 1x10 lighting plate

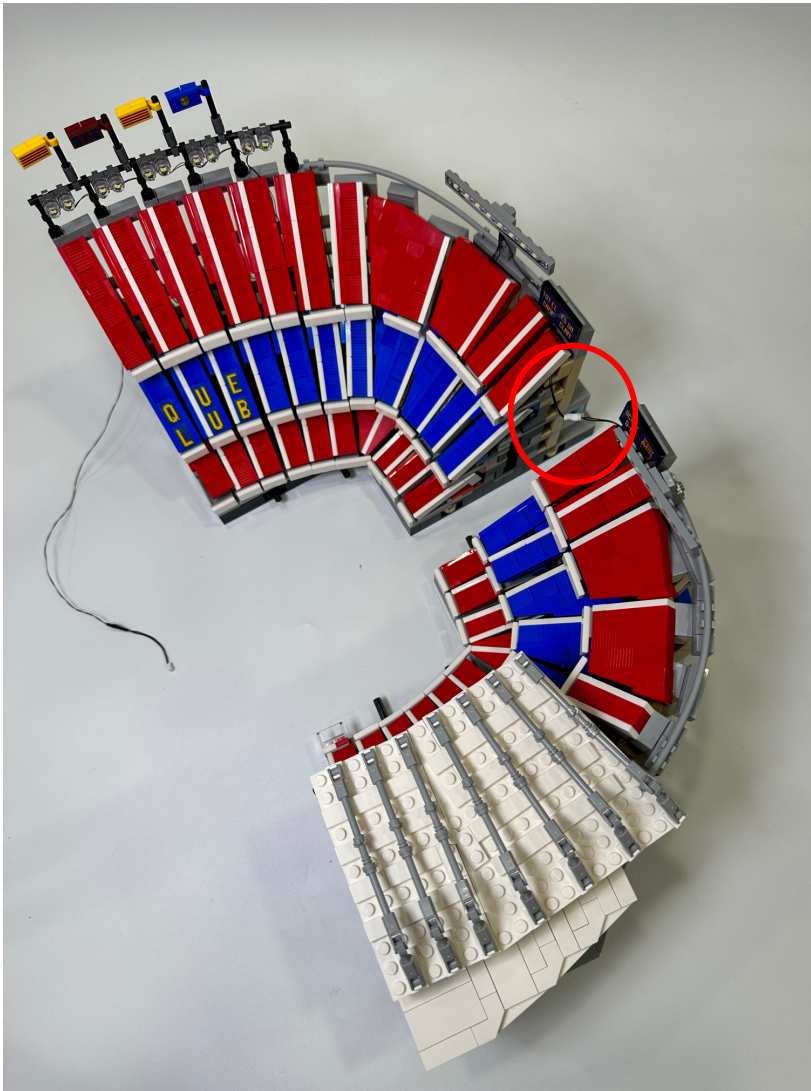

Replace the clear round plates by the lighting round plates

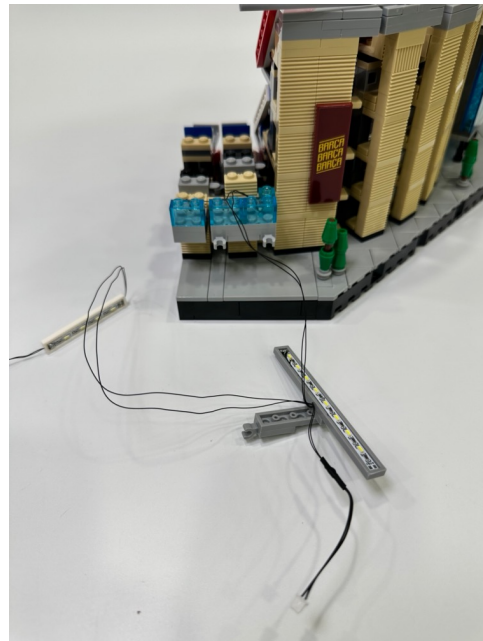

Then this part would be finished

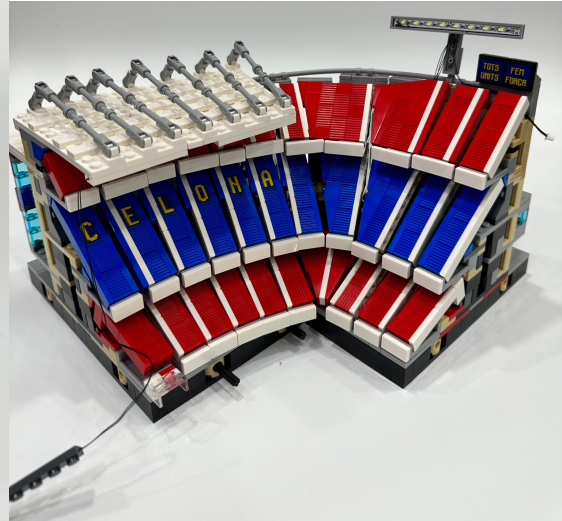

Now connect the two sections by the connector mentioned before

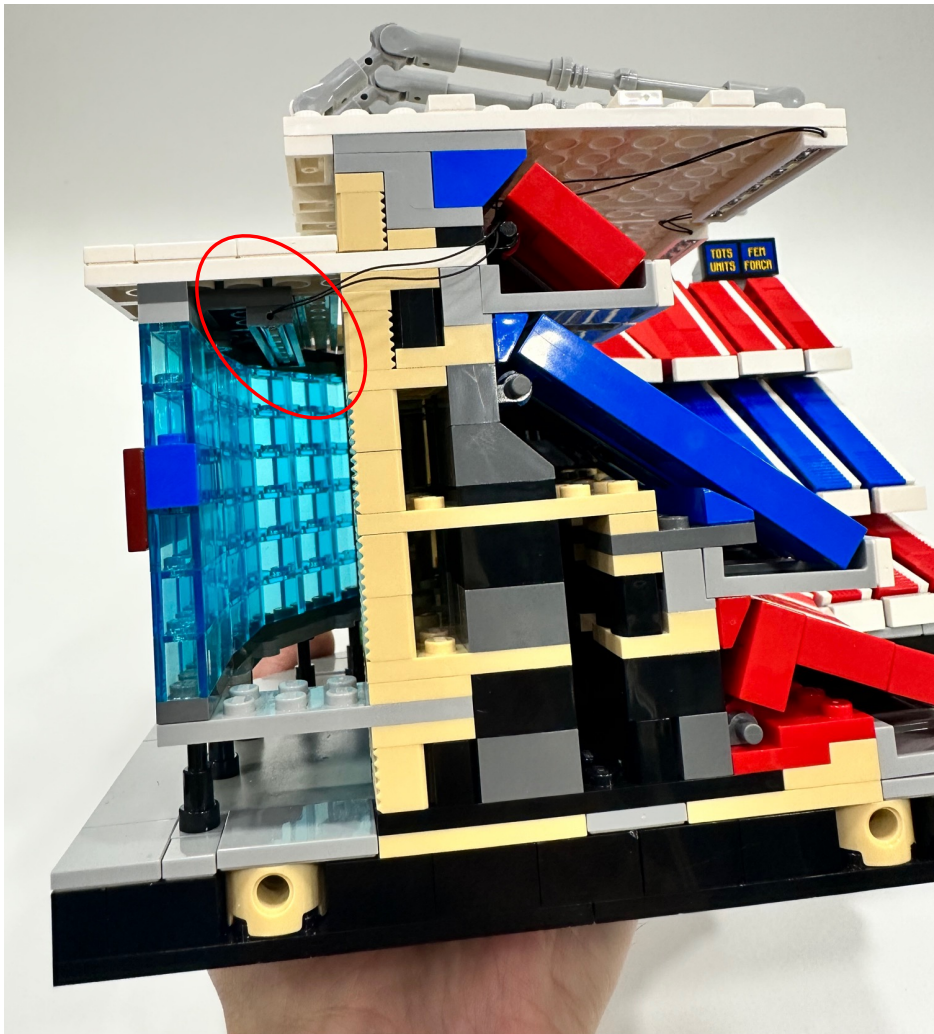

Assemble the other half by the same procedures

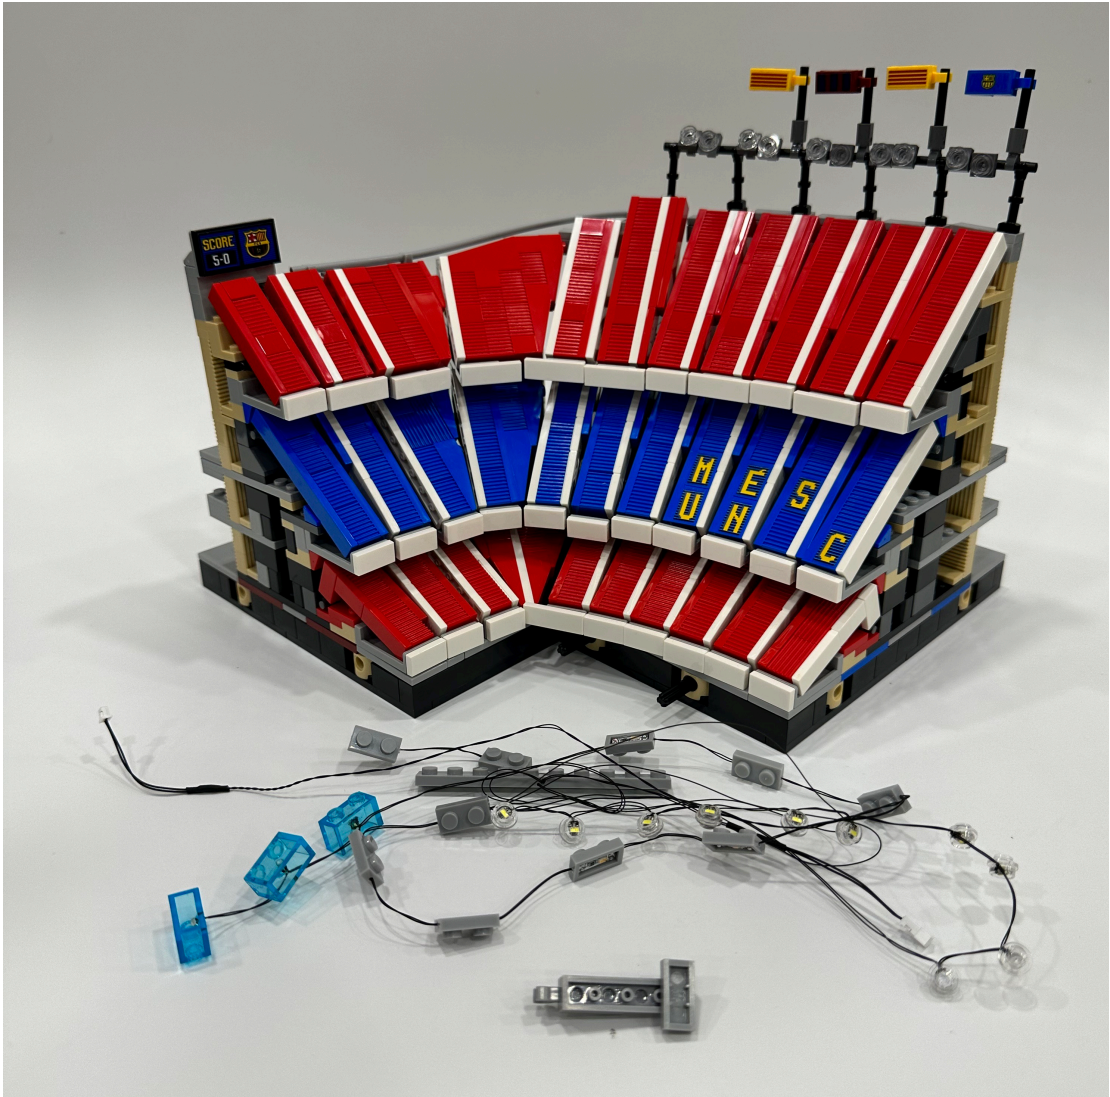

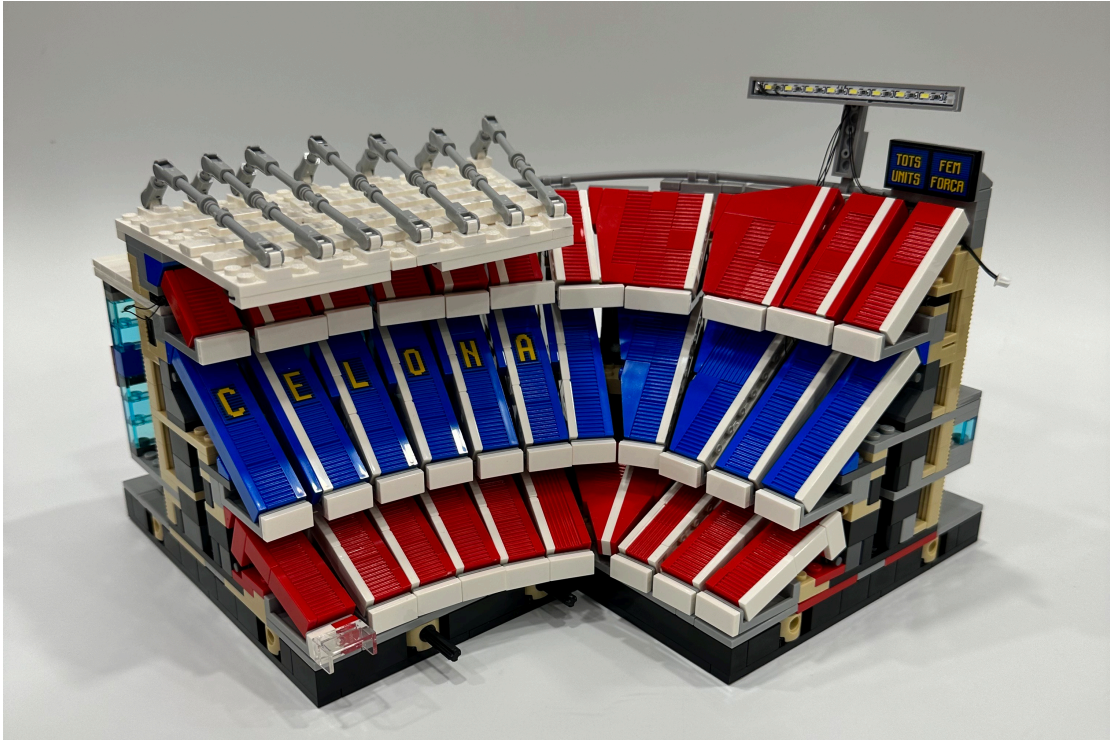

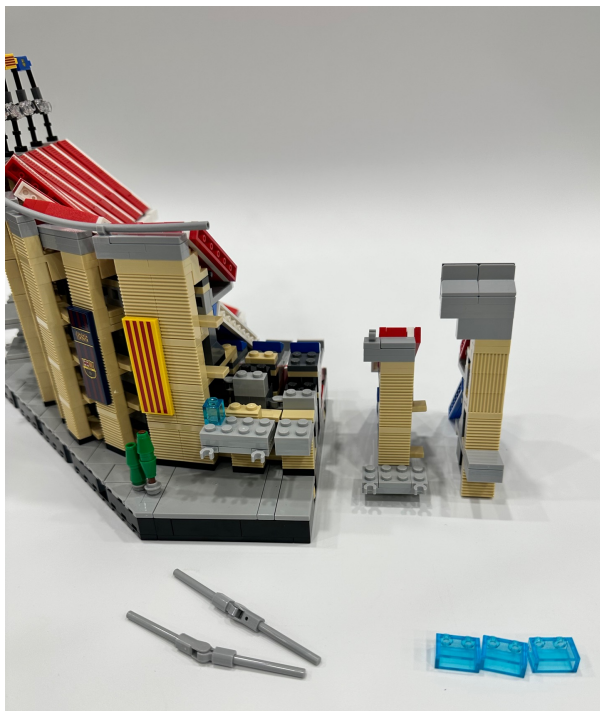

Again, the dark grey lighting plate right behind the big glasses

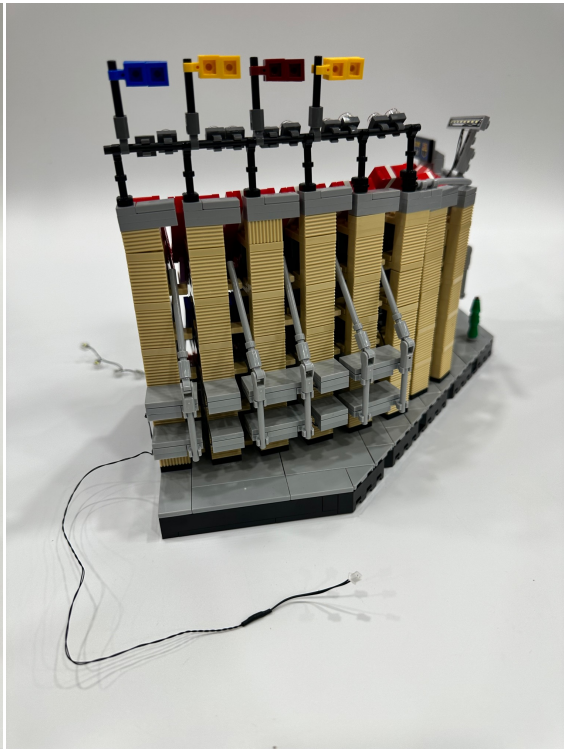

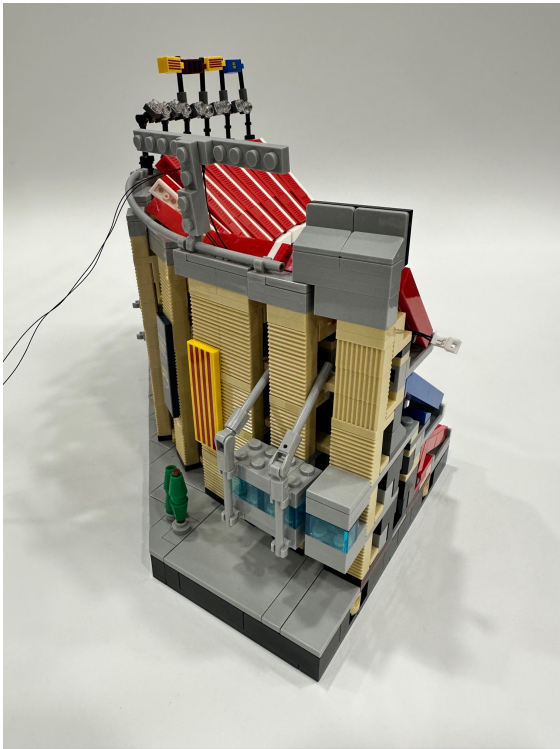

The front section of the other side is done, then assemble the leftover section

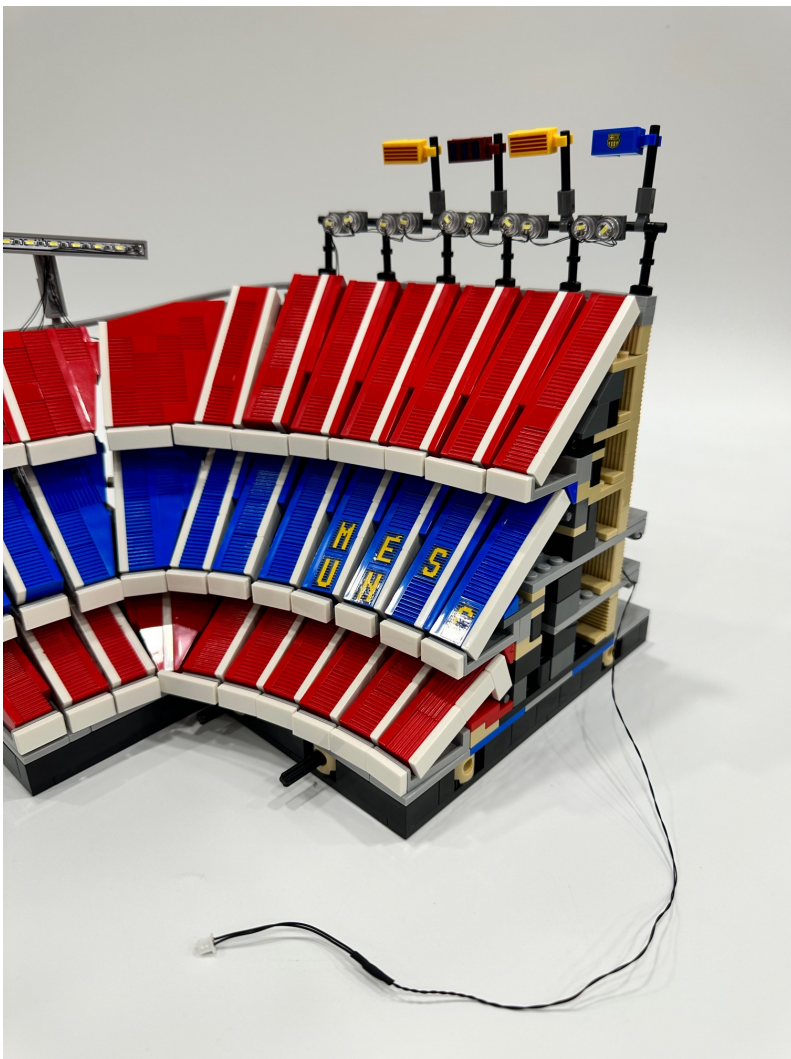

The procedure is basically the same as the other side, just with opposite direction

Now the light installation is finished

After connecting the plugs, put the soccer field back to combine with the stadium
Pull the connectors with long wires out to the back and connect with USB cable to power up
