

LEGO 21064

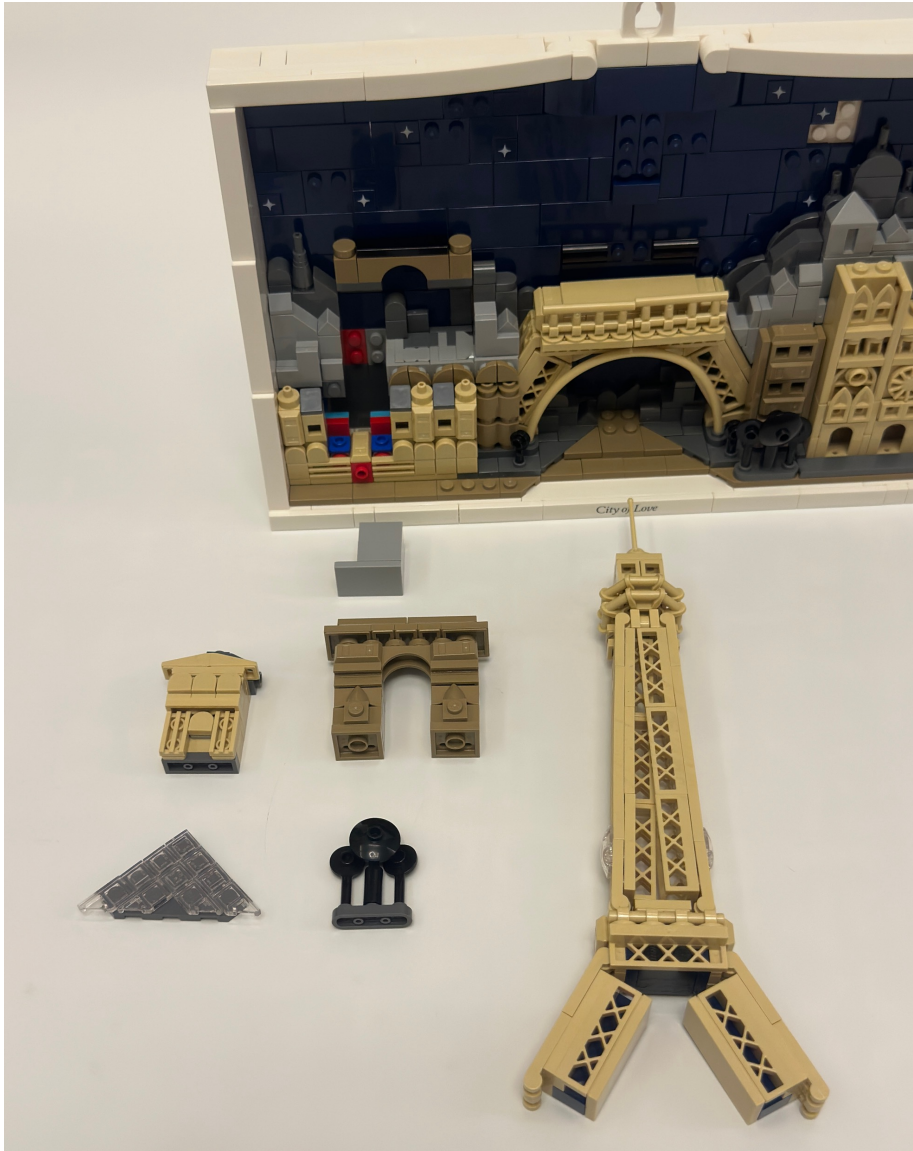

Paris— City of Love

Installation Guide

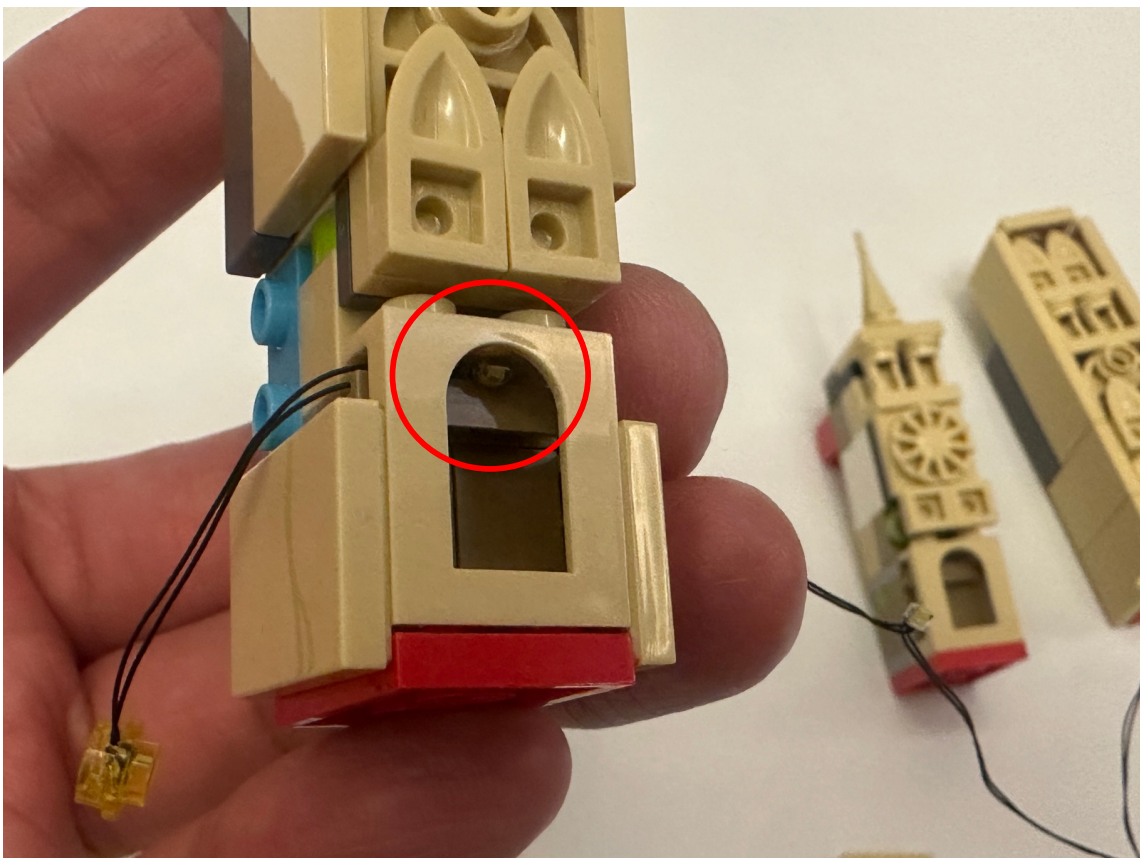

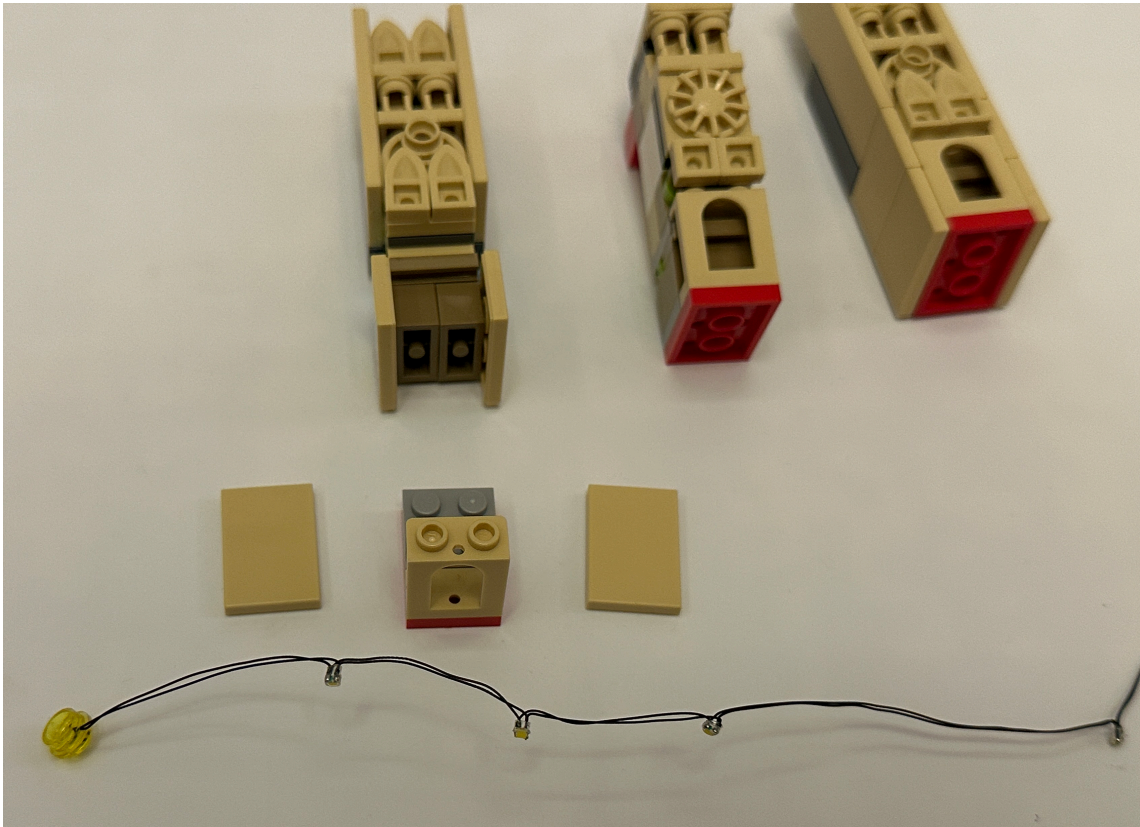

First of all, detach the shown parts from the left side

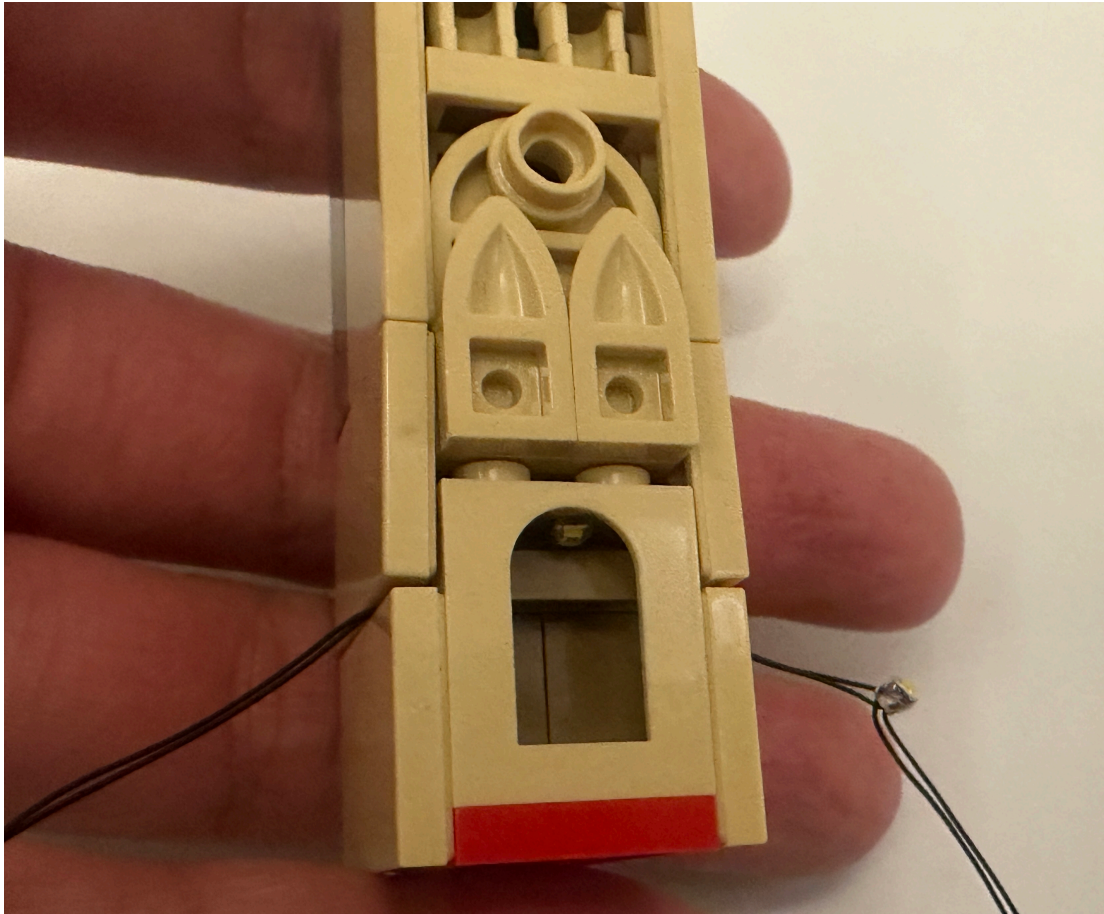

Detach the parts from the right side by the shown orders

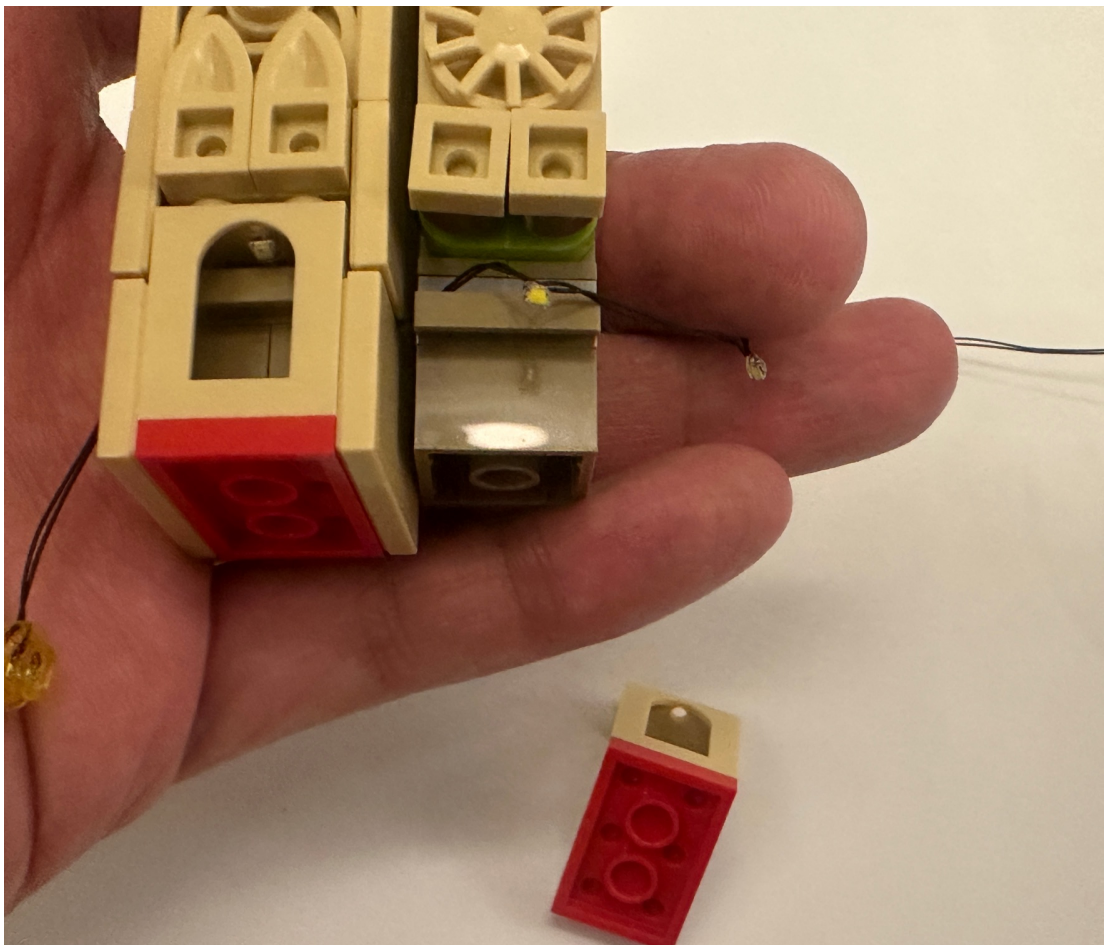

Find out the yellow round plate and three connected led bulbs from the lighting kit, detach the ground floor of the shown building, place the bulb next to the round plate into the door as shown in red circle

Place the wire in between the tiles of both sides after restoring the tiles

Move the second bulb to the next entrance

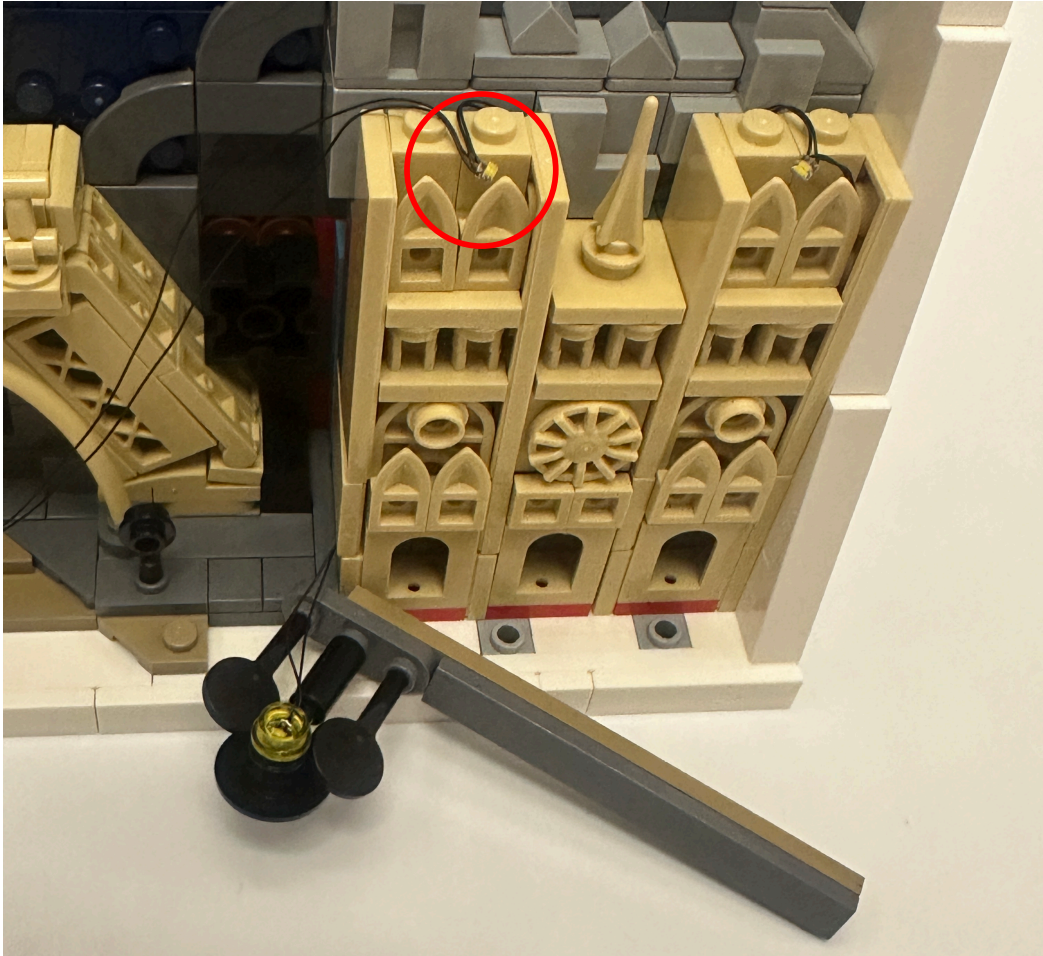

Restore the second entrance and move the third bulb to the next entrance

Move the fourth bulb to the top and the wire would be hidden under the tiles on right

Place the fifth led bulb on the other top (red circle) and hide the wire behind the grey tile in between them then assemble the yellow round plate when restoring the parts

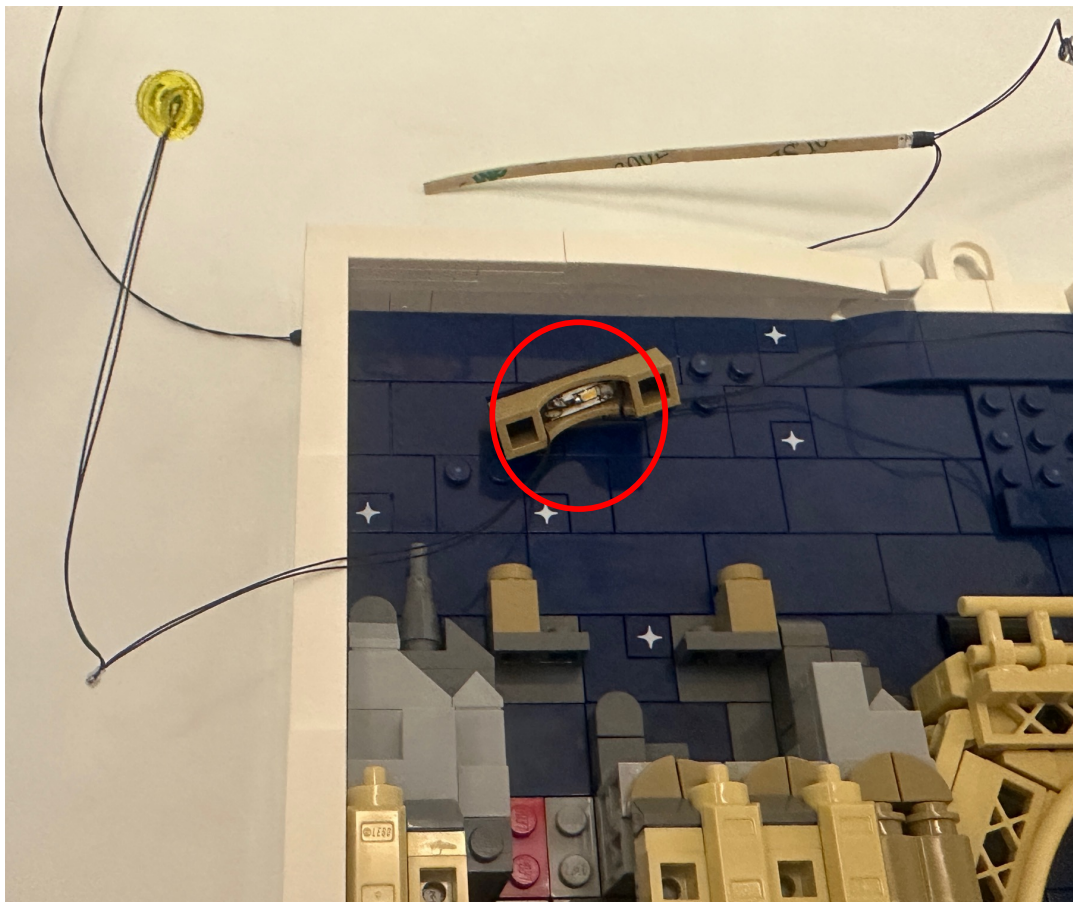

Place the short led plate under the Eiffel Tower

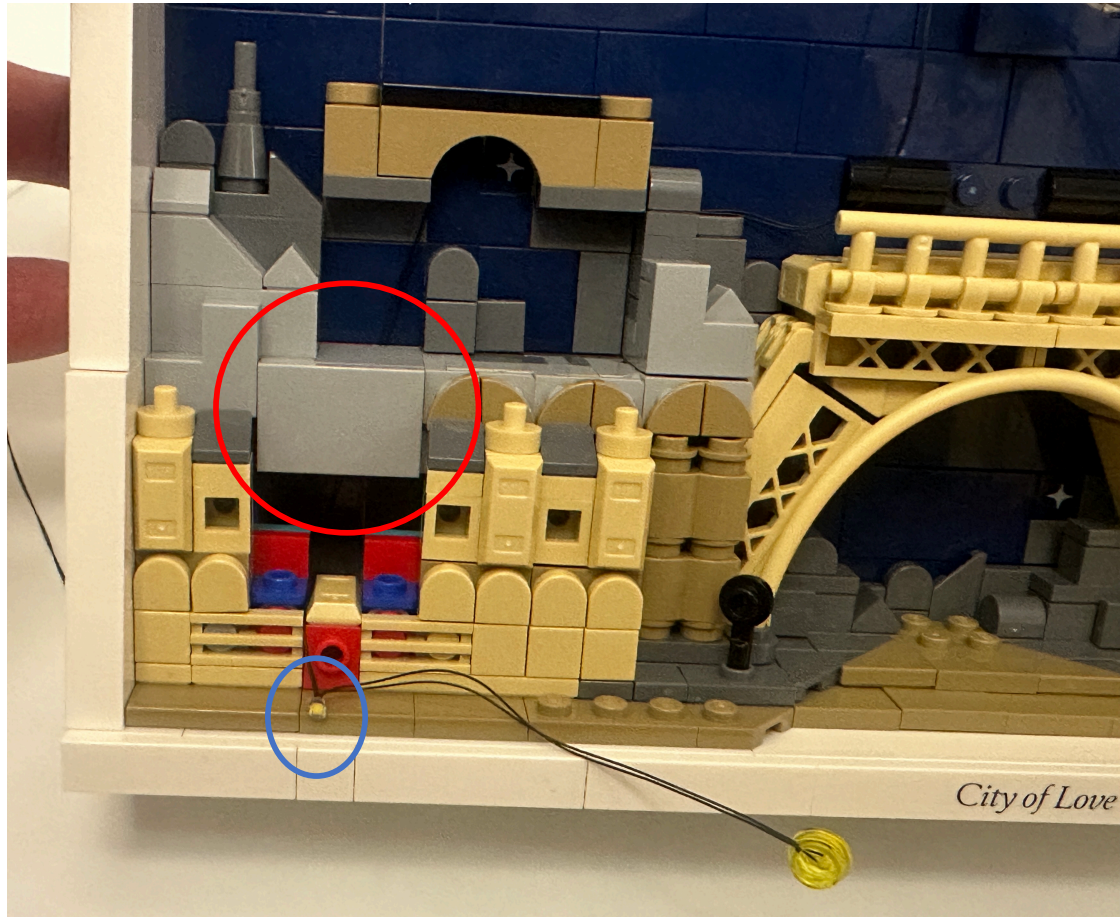

Then stick it under the tower

Stick the other short led plate under the arch

Move the following lighting parts to the bottom and cover the wire by restoring the grey brick (red circle) and settle the led bulb at where the blue circle

Restore the parts detached from the 1st step, the led bulb would be settled under the Louvre

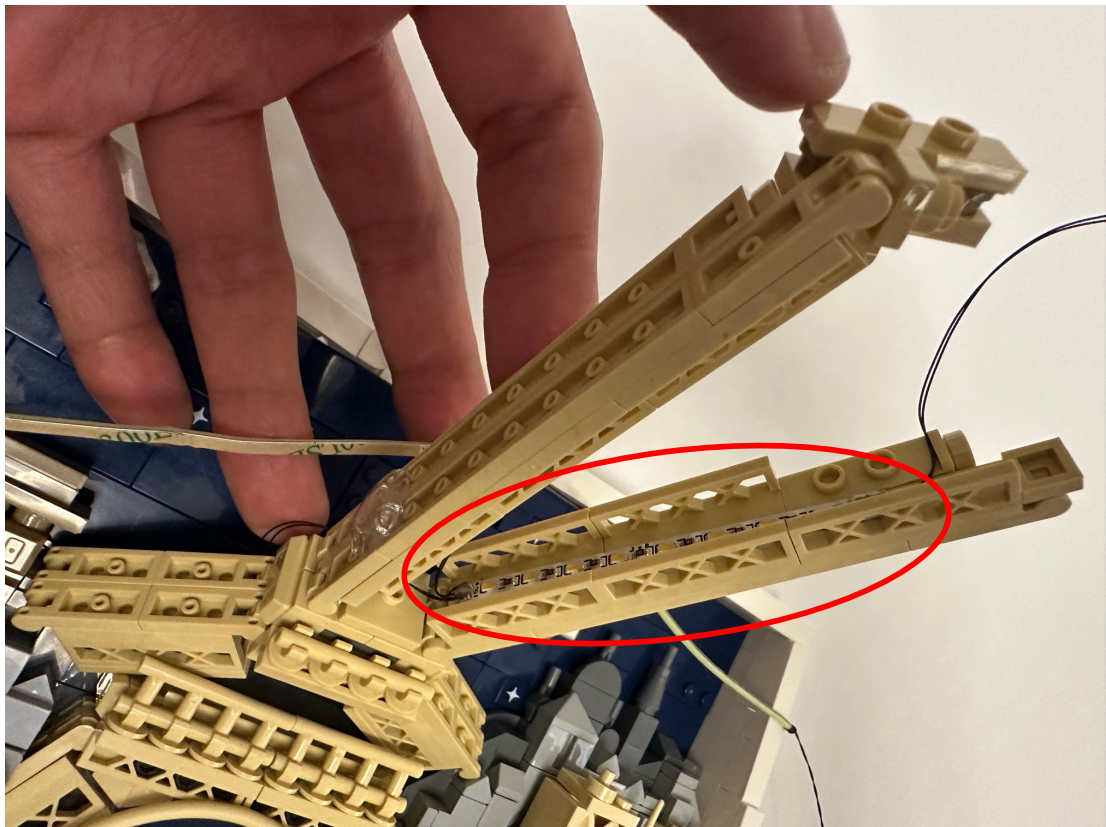

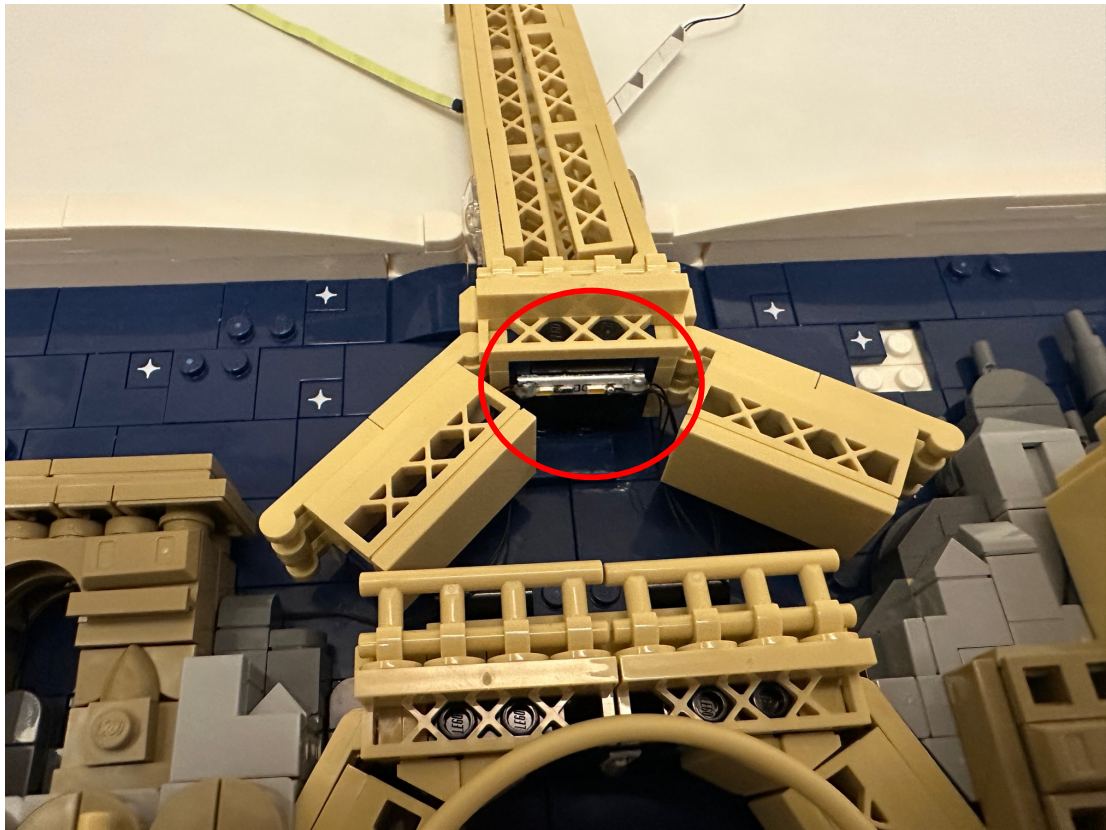

Restore the black parts and assemble the lighting round plate

Now assemble the remain lights to the Eiffel

Stick the led plates to the shown position

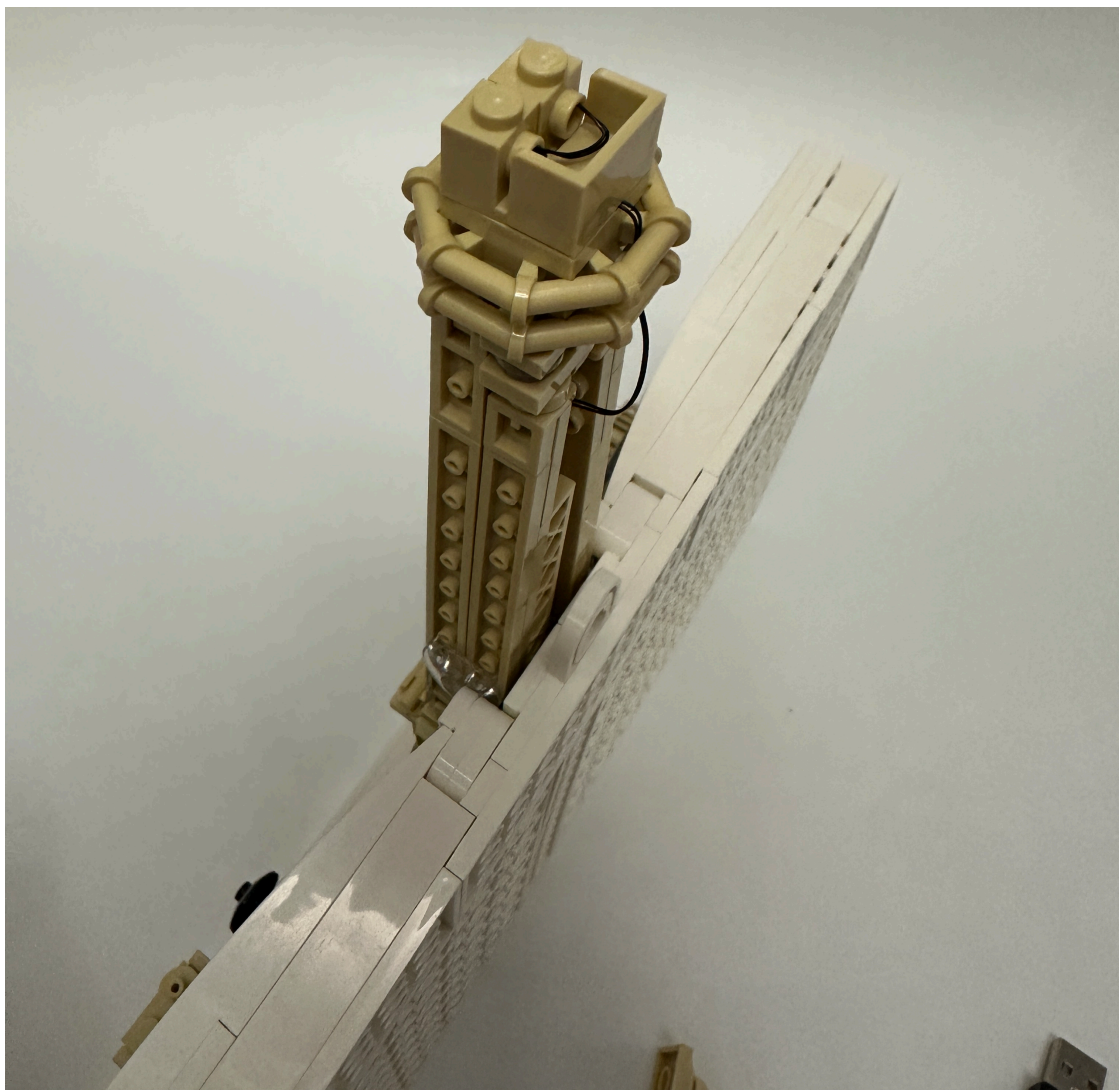

Restore the body of Eiffel and stick the led strips to the top

Remove the shown parts from the top corner to move the wire out then restore the parts

Insert the remain led bulbs to the bricks of the tower top

Restore the top then it's finished
