

M38-B1367

**B-17G Flying  
Fortress**

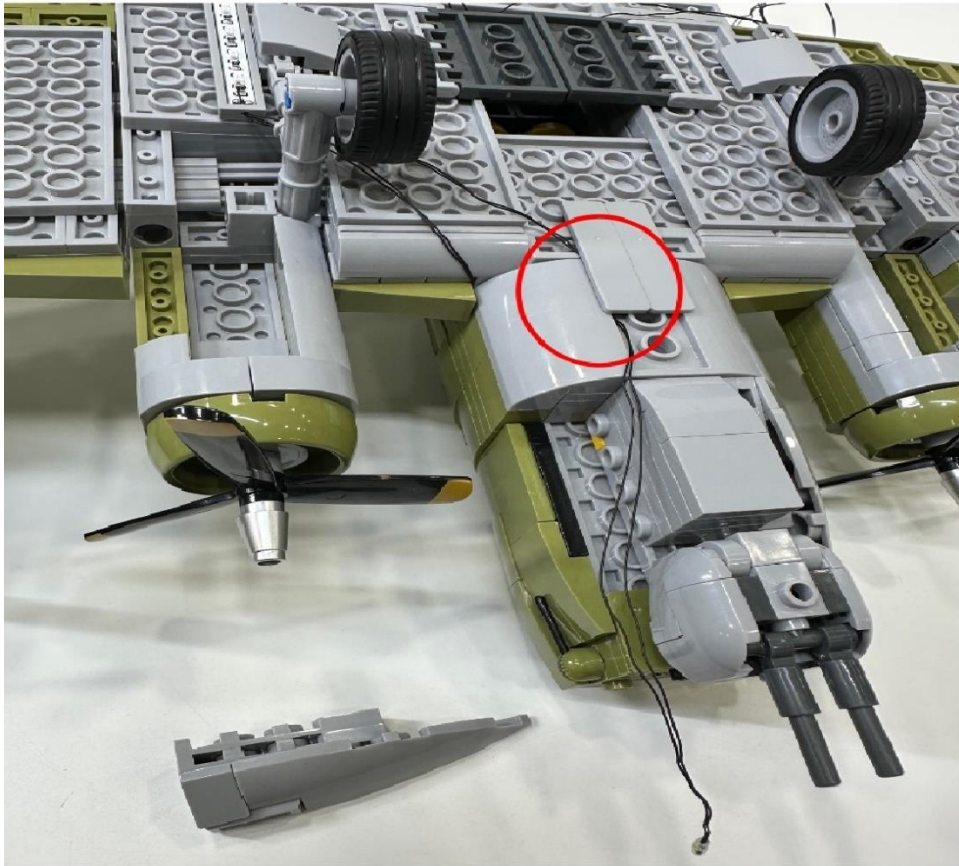

*Installation Guide*

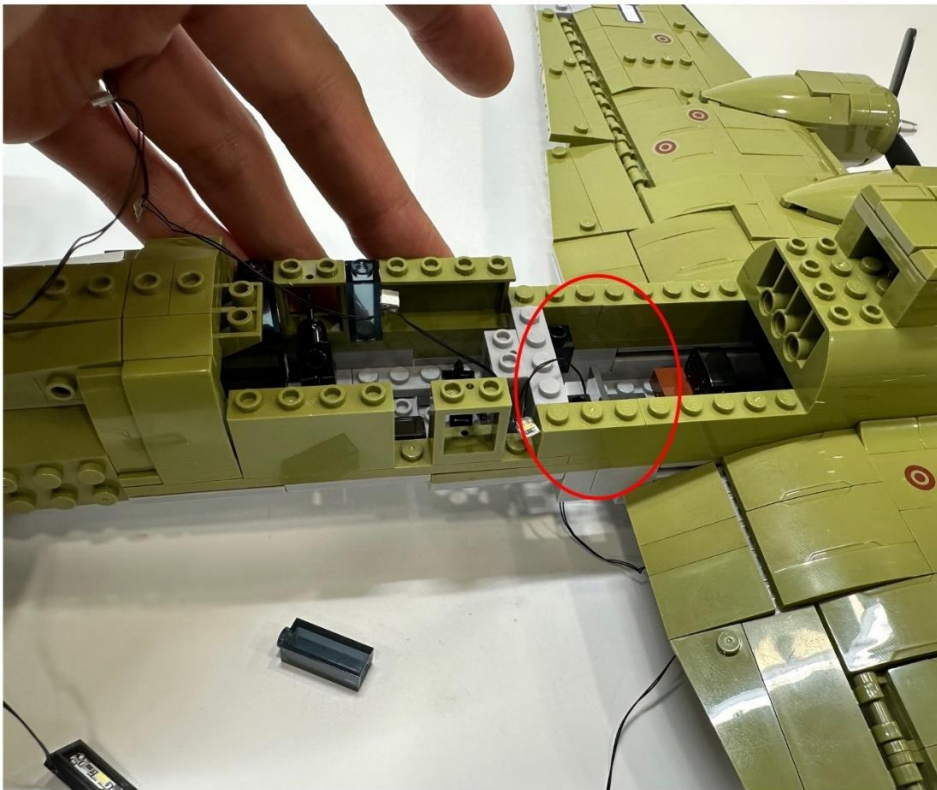

Place the lighting plates in the position shown under the plane, as indicated by the red circle.

Make sure the lighting parts indicated by the blue circle are facing the front of the plane.

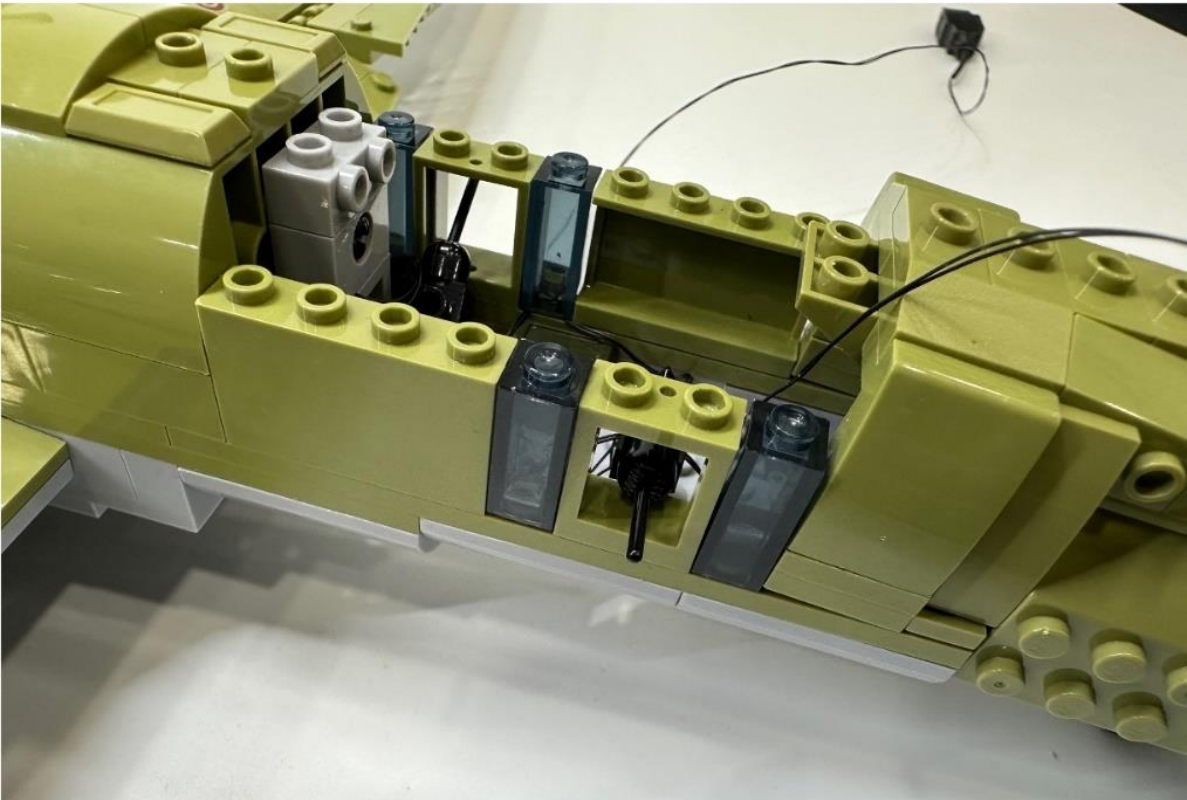

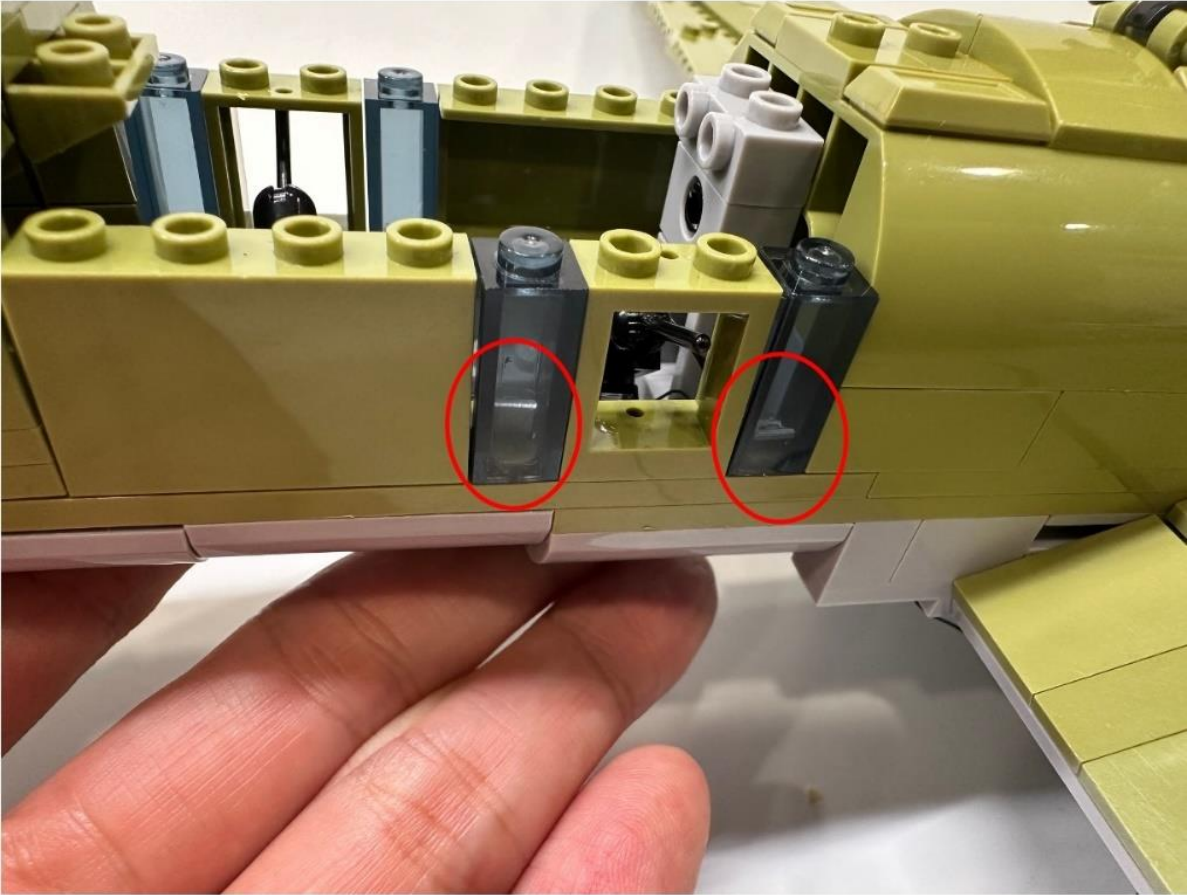

Route the single LED bulb to the front, secure the wire with the tile indicated by the red circle, then reinstall the removed parts.

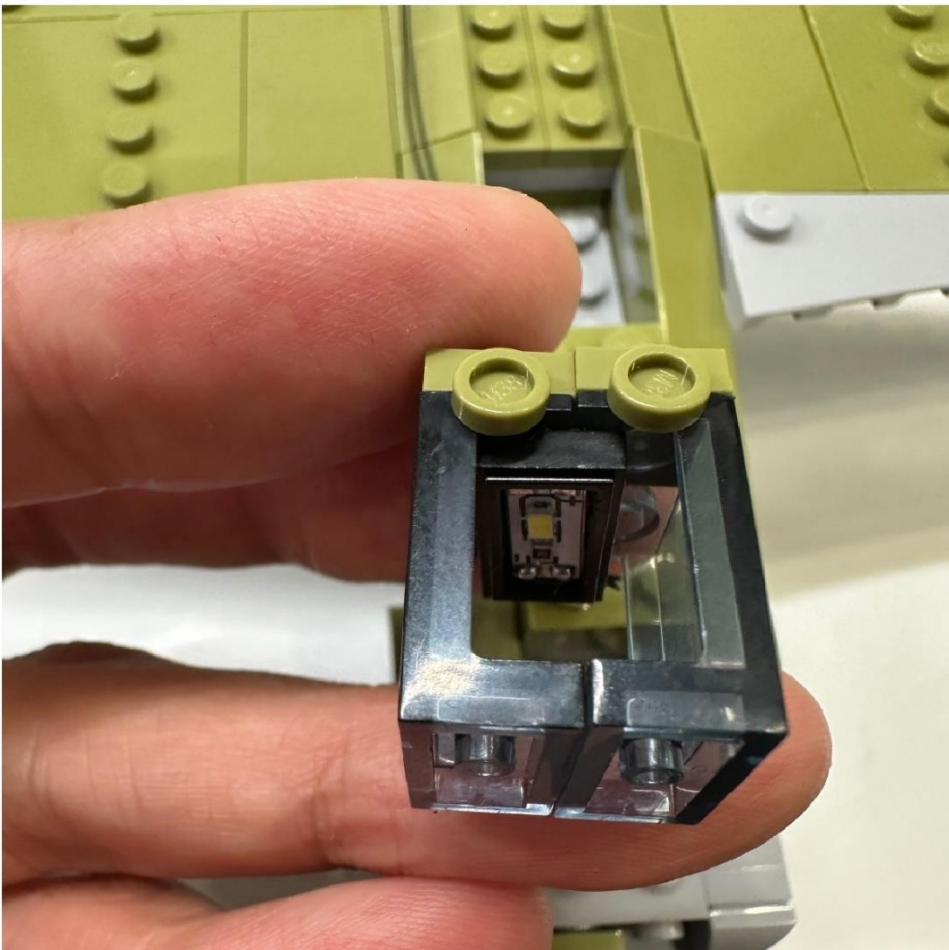

Place the LED bulb on the black plate, then refit the cover.

Attach the black 1x2 lighting plate to the pilot seat, route the wire through the gap marked by the red circle, then reinstall the removed parts.  
For the remaining parts, remove the top of the middle part of the plane then pass the lighting parts through to the surface.

Place the led plates inside the clear black blocks

Move the remain lighting part to the end, remove the parts shown on the surface to place the wire inside the gap of it. Stick the lighting tile inside the clear parts.

Restore the tail of the plane then you can light it up
