

# Lego 76304

## **Batman Forever Batmobile**

### *Installation Guide*

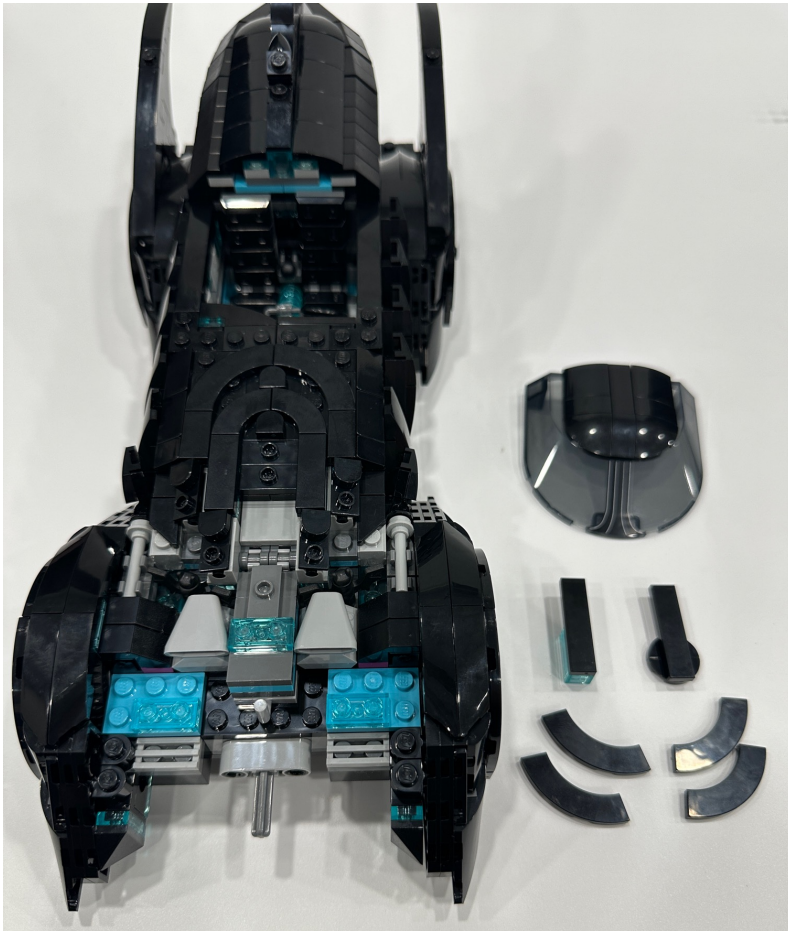

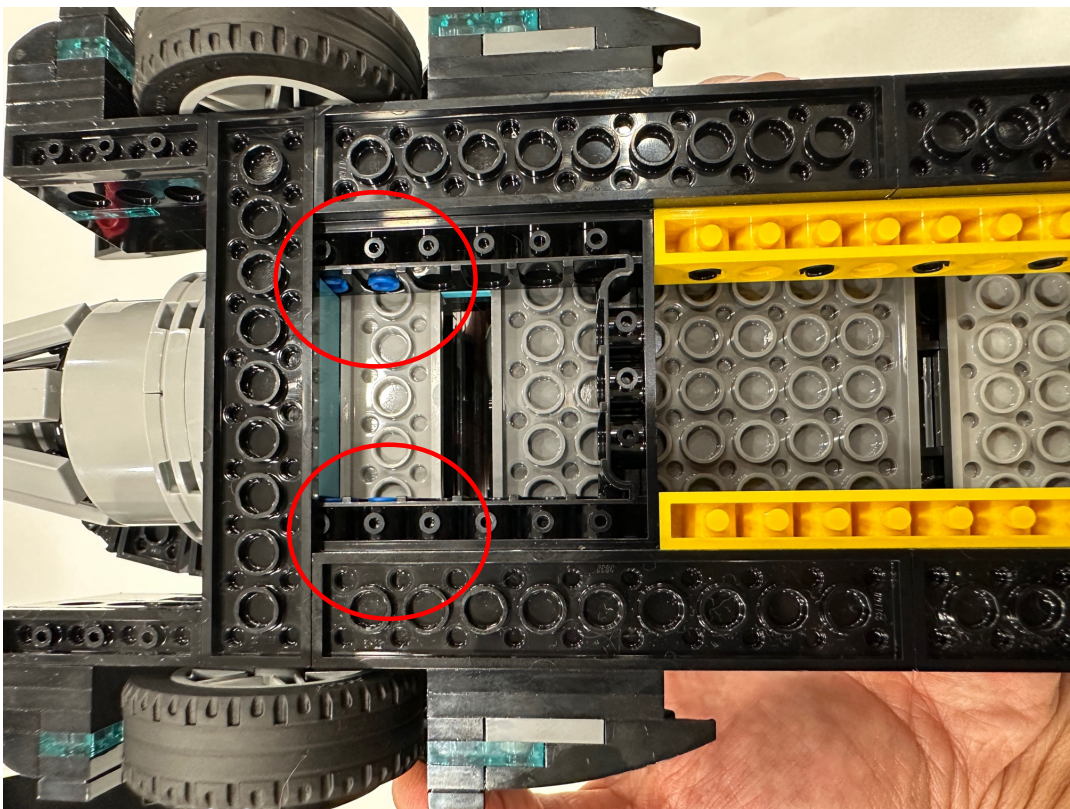

Firstly remove the shown parts on the head side

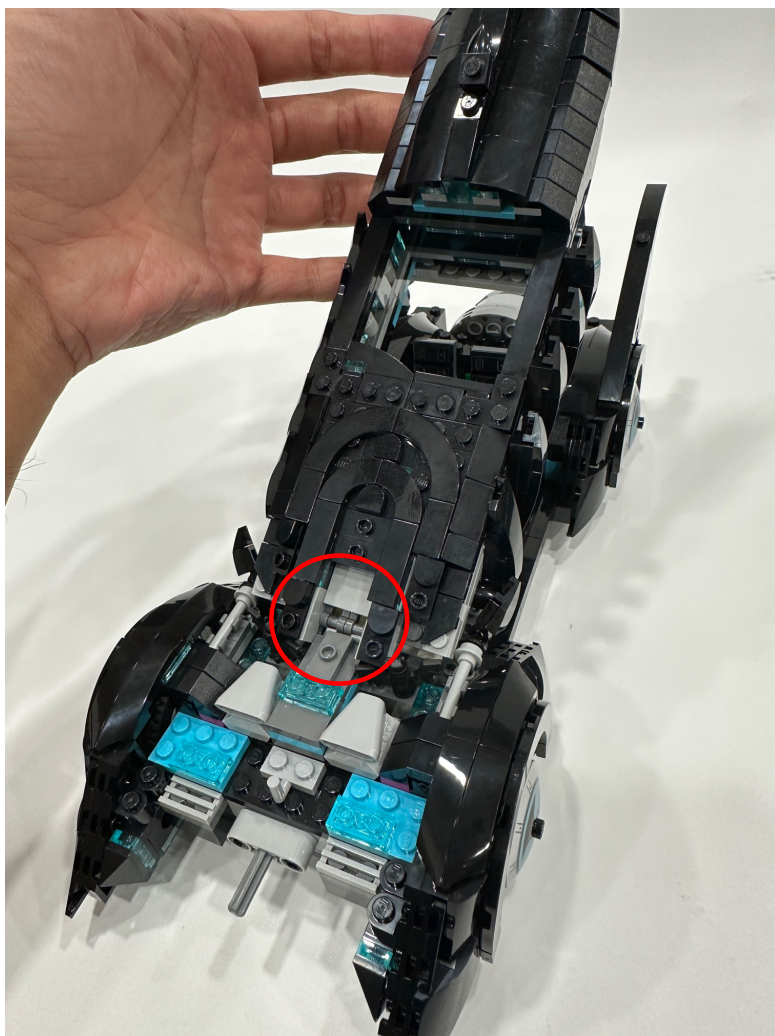

Then remove the cover and the parts in the middle

Turn to the bottom, detach the light grey plate in the red circle shown

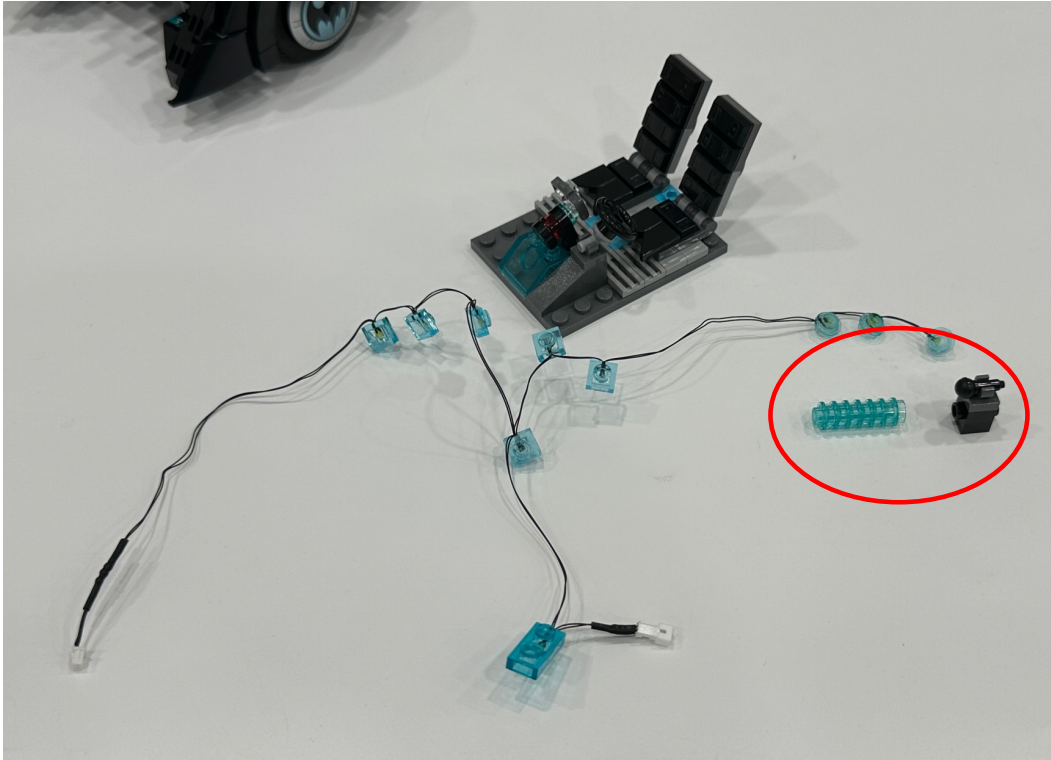

Lift up the body then detach the part in the red circle

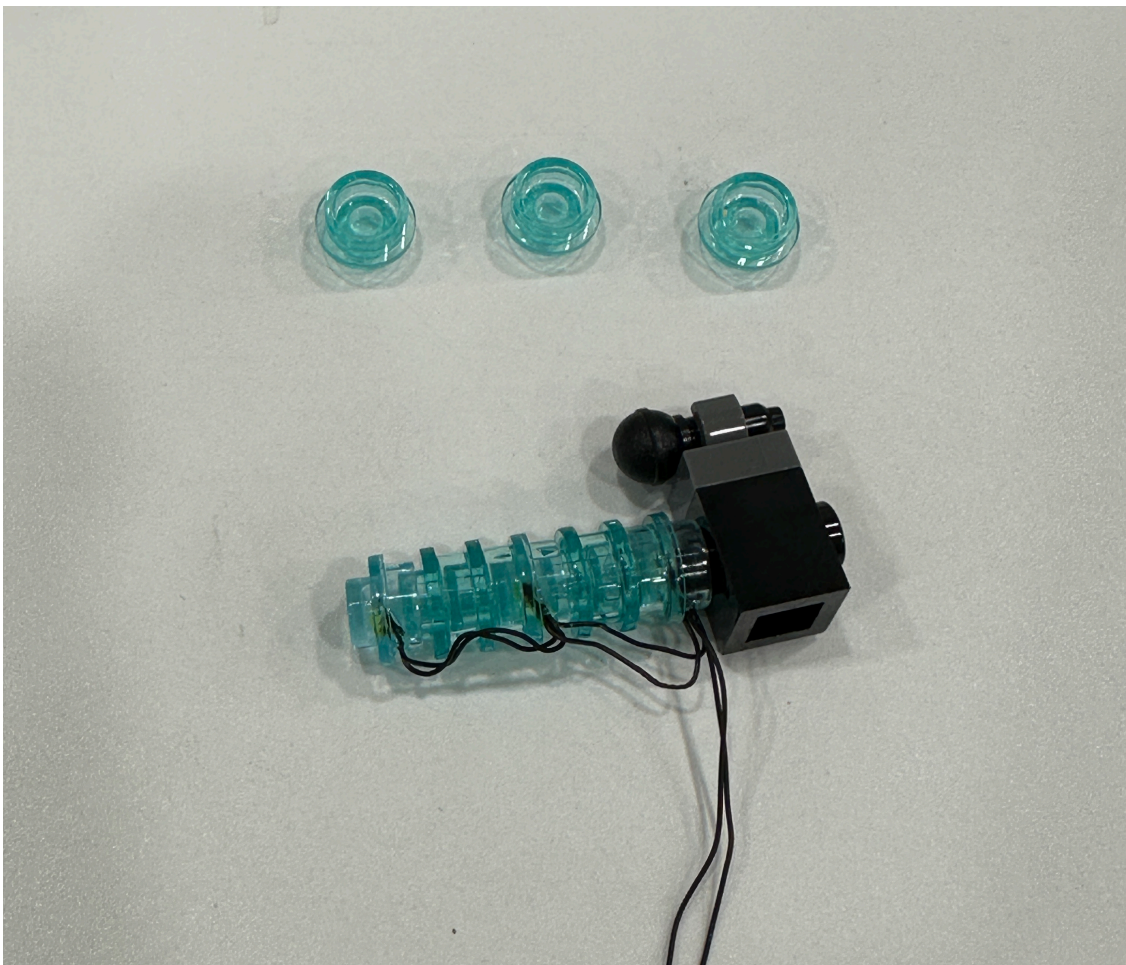

Remove the plate with seats after

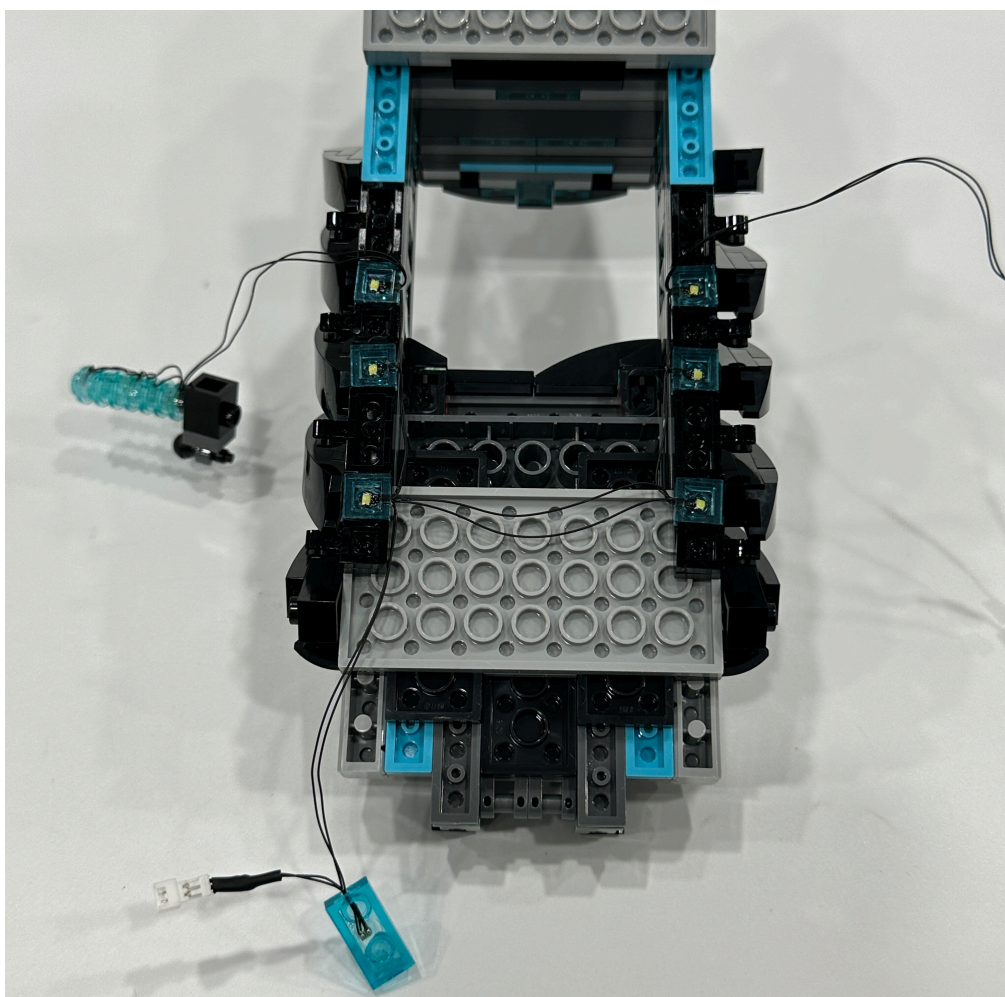

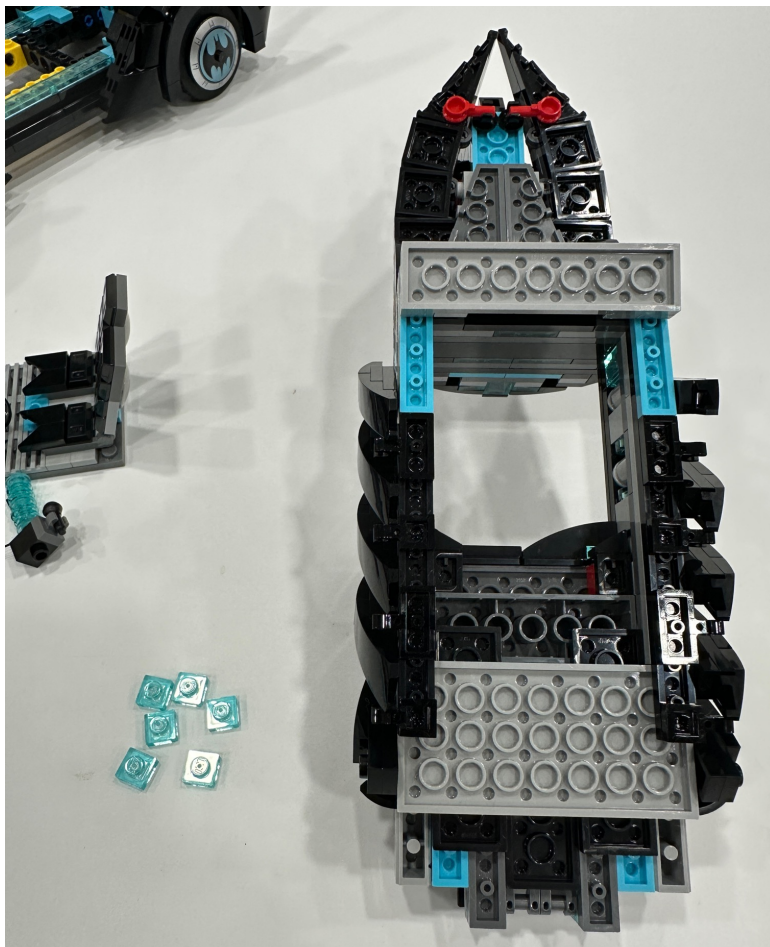

Get lighting part A, remove the blue round plates in between the seats

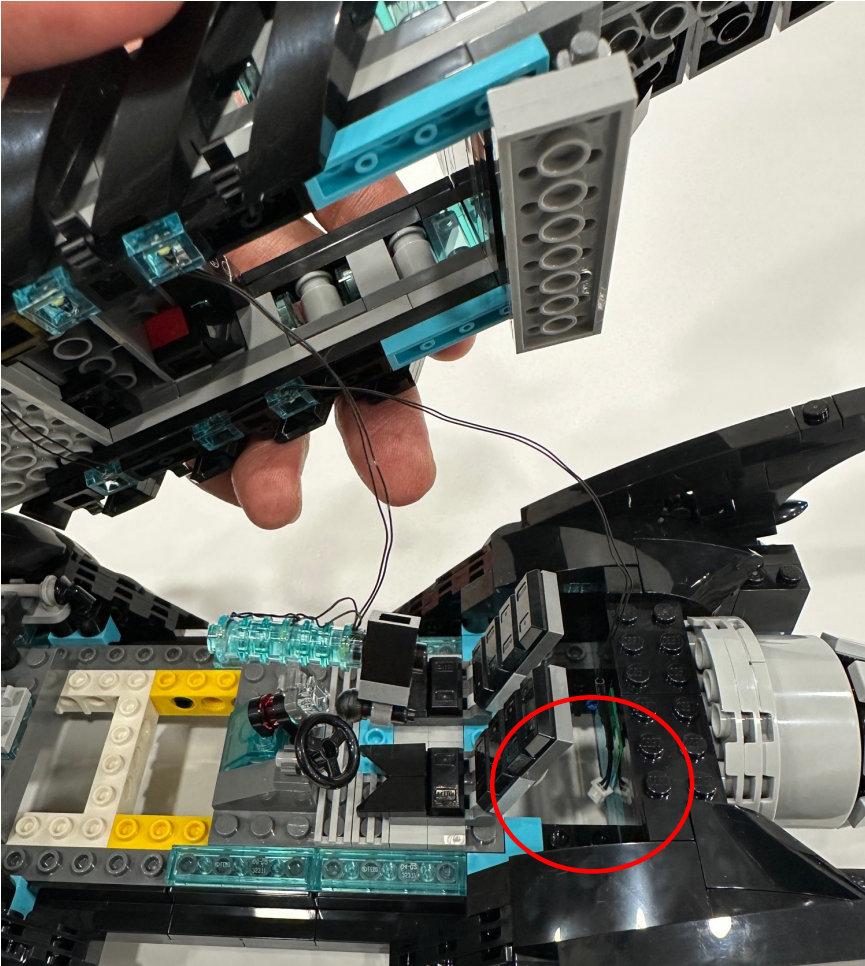

Replace three pieces of the round plates by the lighting round plates from part A  
Place the lighting round plates in the front, middle and the end of it

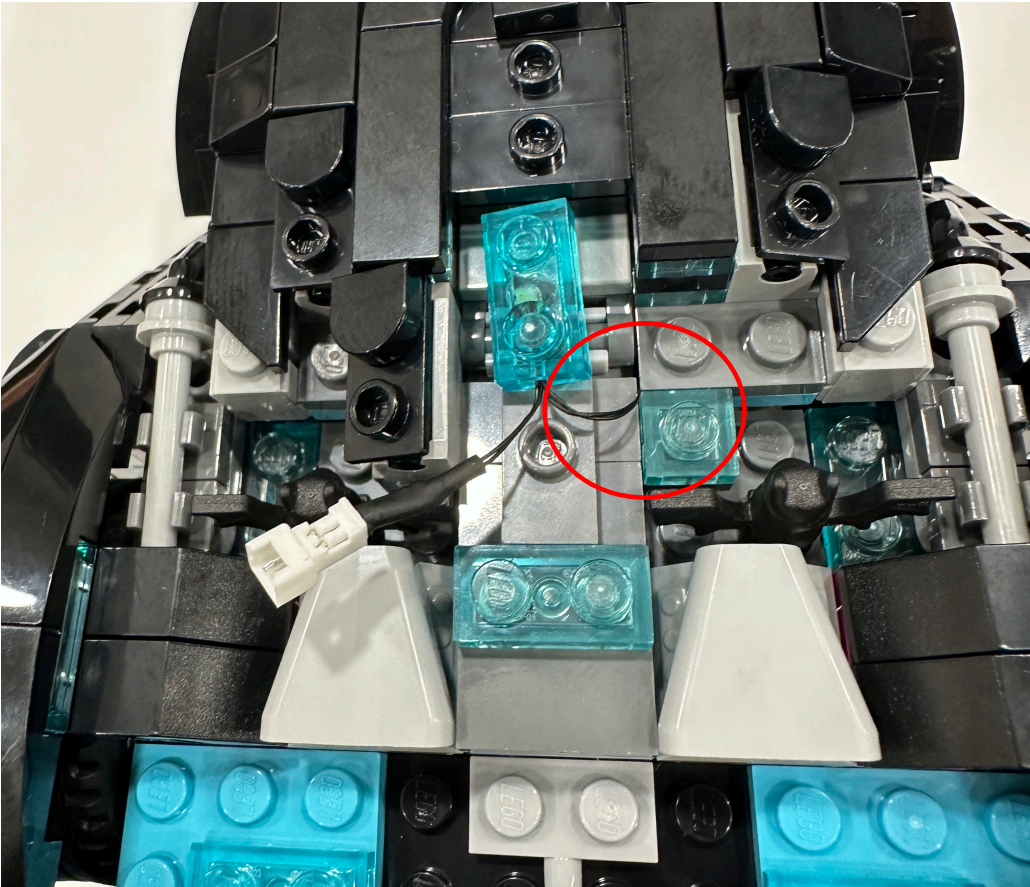

Remove the 1x1 blue plates from the bottom of the body and replace by the lighting plates, watch out the direction make sure the connector and round plates are facing the rear side

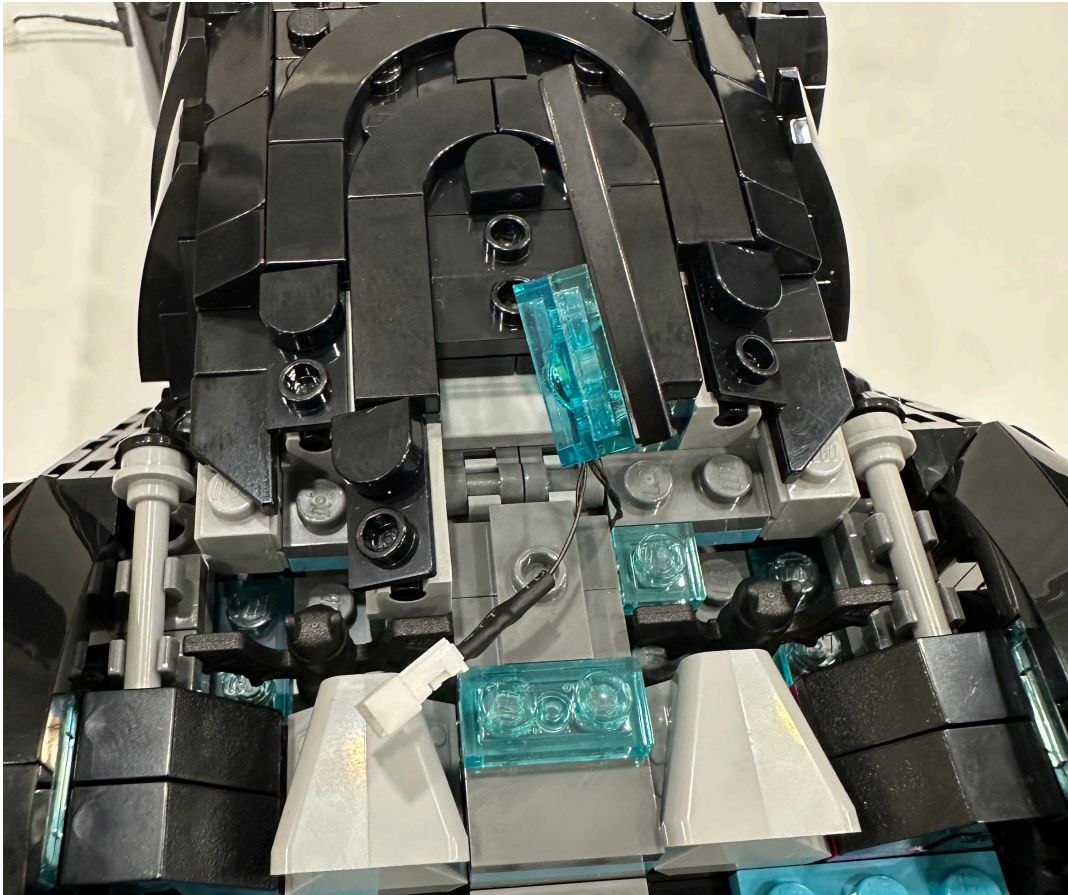

Restore the body, place the connector behind to seat and get through to the bottom

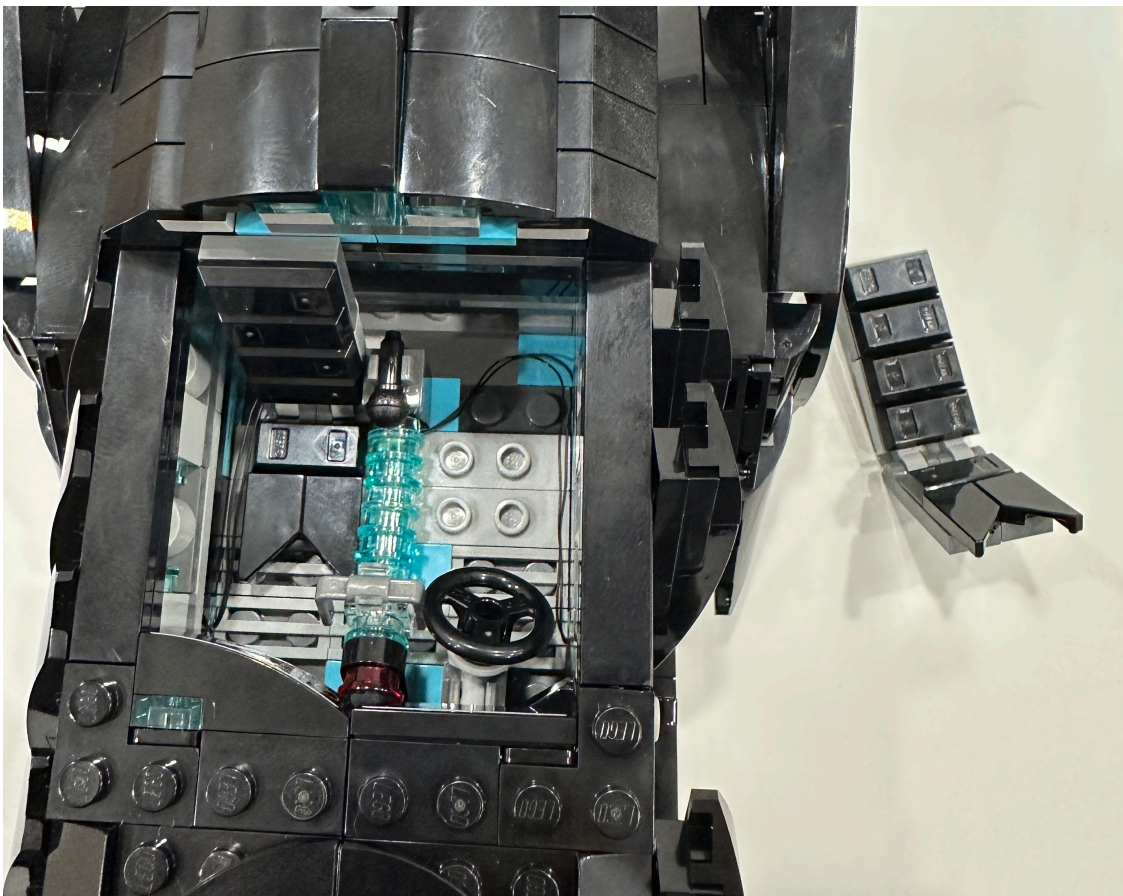

Before joining the grey clip, carefully move the 1x2 lighting plate with the connector up to the surface, the wire can be placed in between the gap in red circle

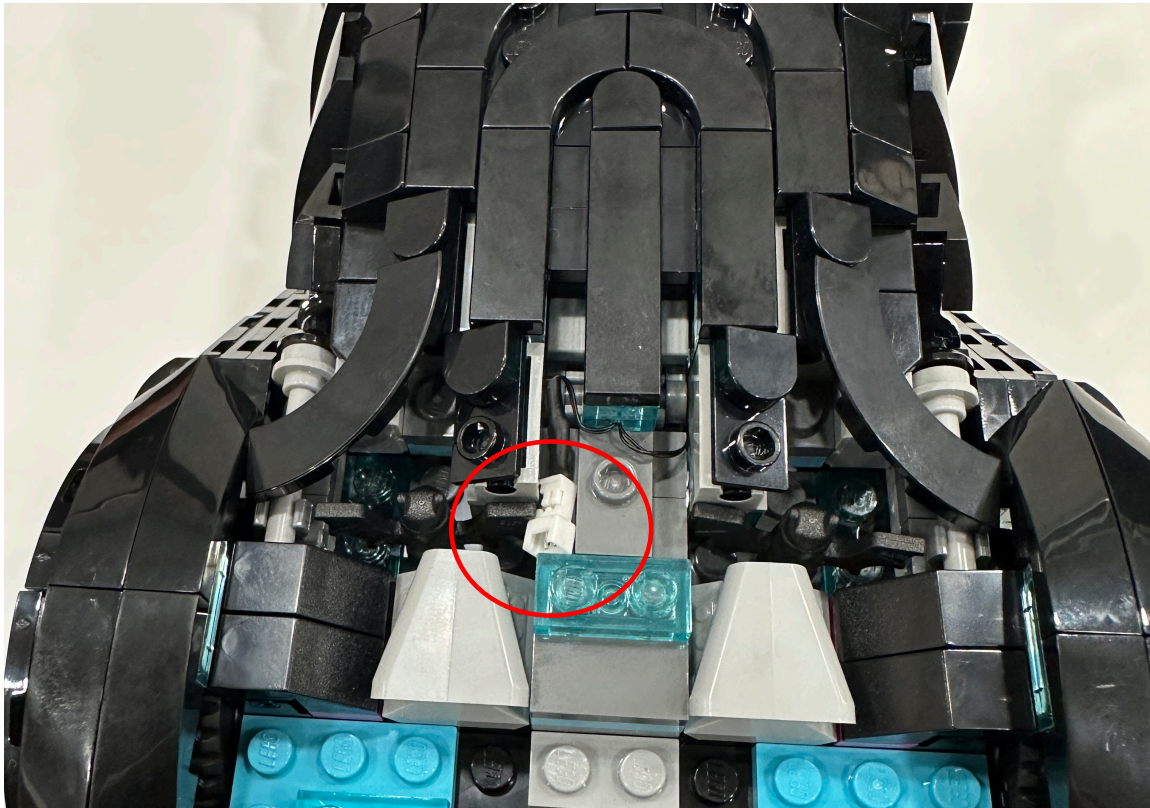

Take away one of the 1x2 plate from the shown part and replace by the lighting plate

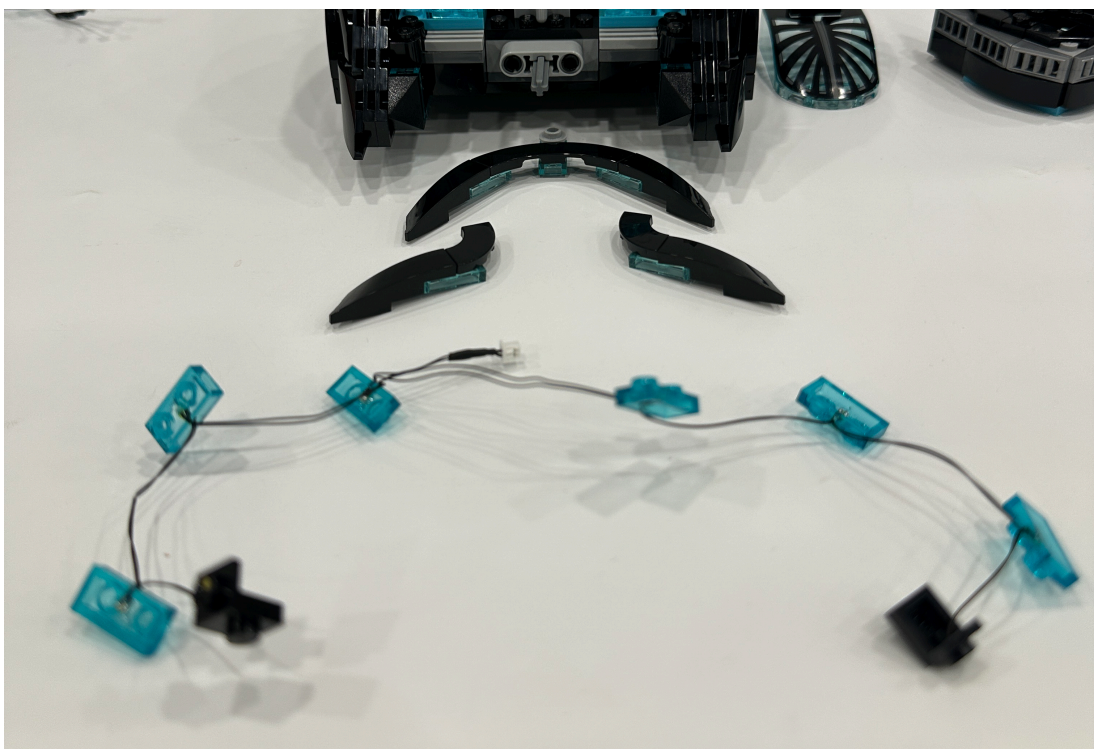

Restore the lighting round plates and place the wire behind the seat

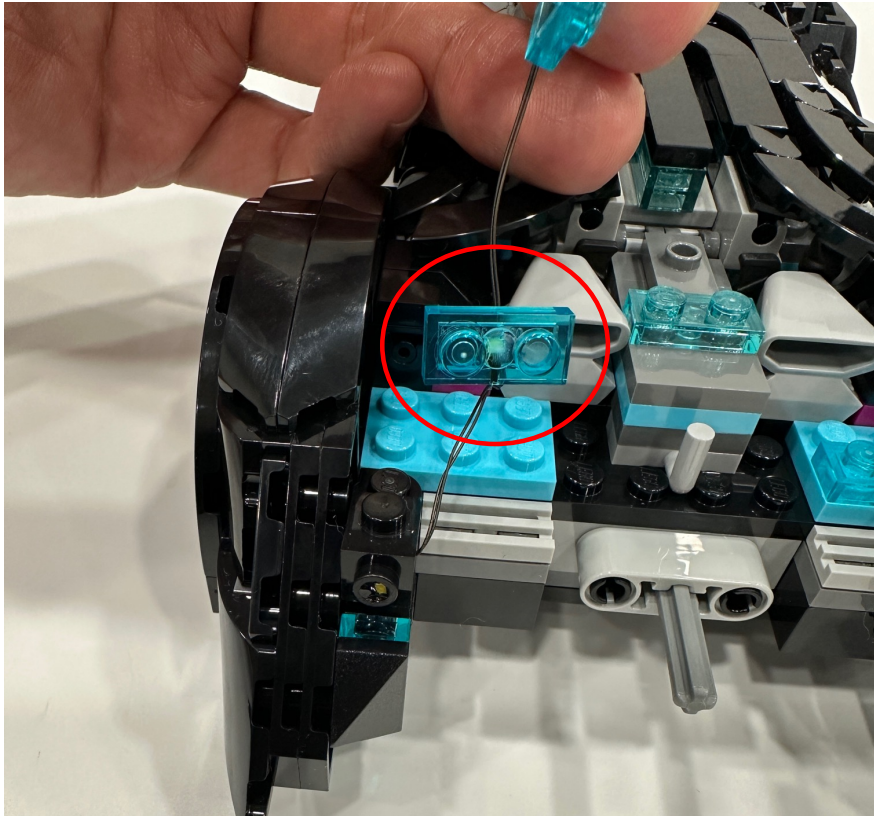

Hide the connector inside the space shown and connect with lighting part B later on

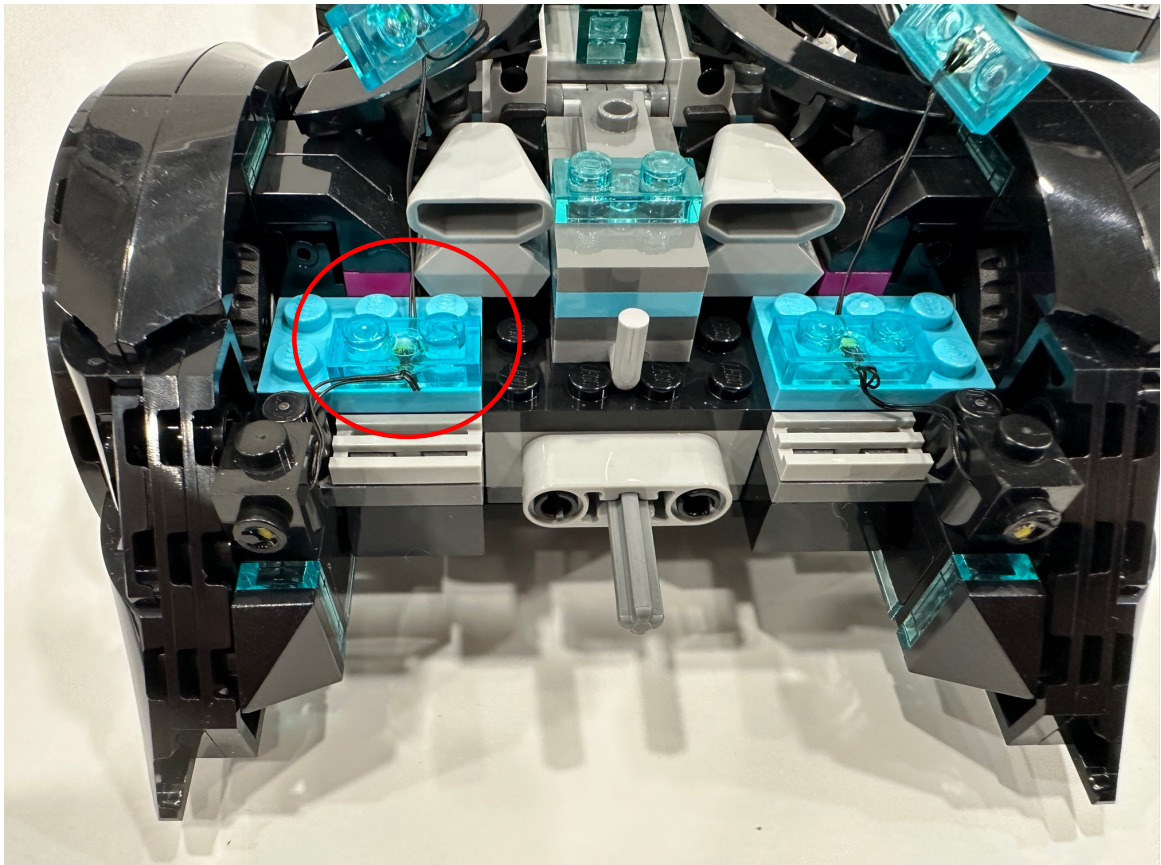

Take lighting part B to assemble at the front side of the Batmobile

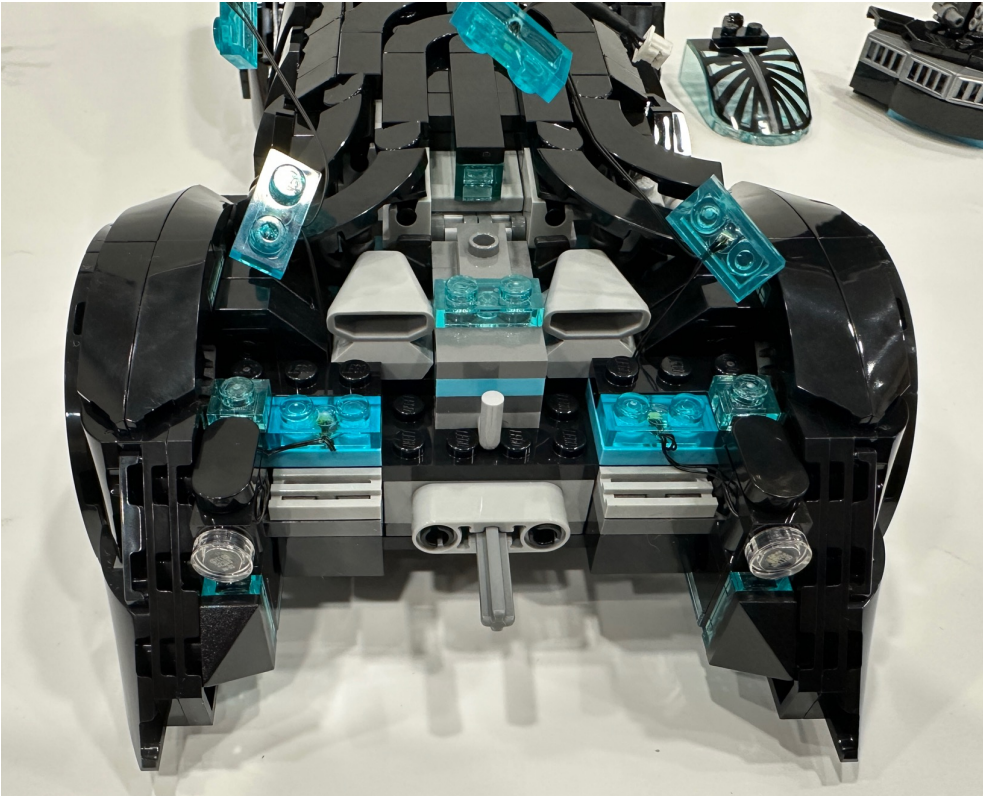

Replace the headlight by the lighting part, place the wire in between two 1x2 lighting plates UNDER the first one then place it on the blue plate

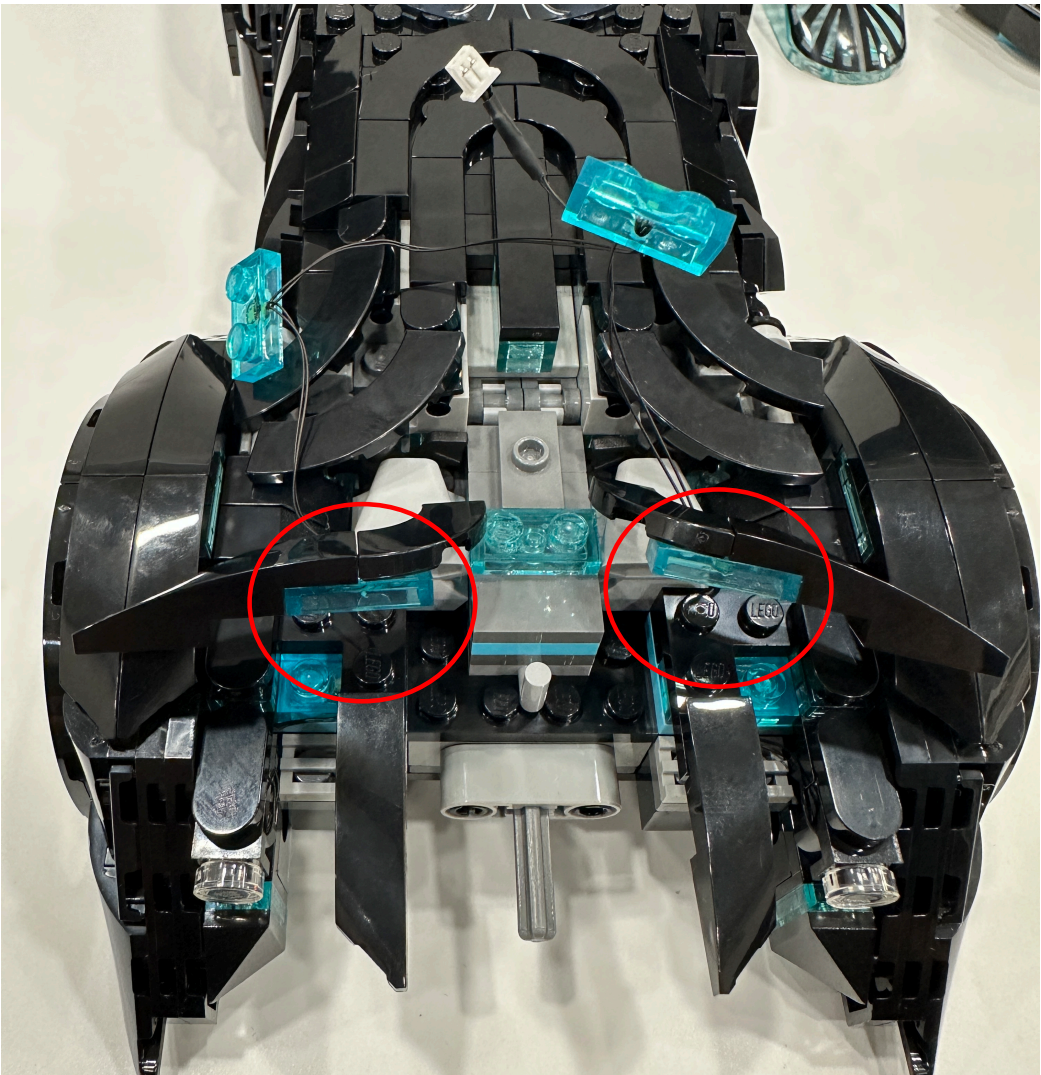

Do this for the both sides, as you can see the wires would be stabled in between the blue studs

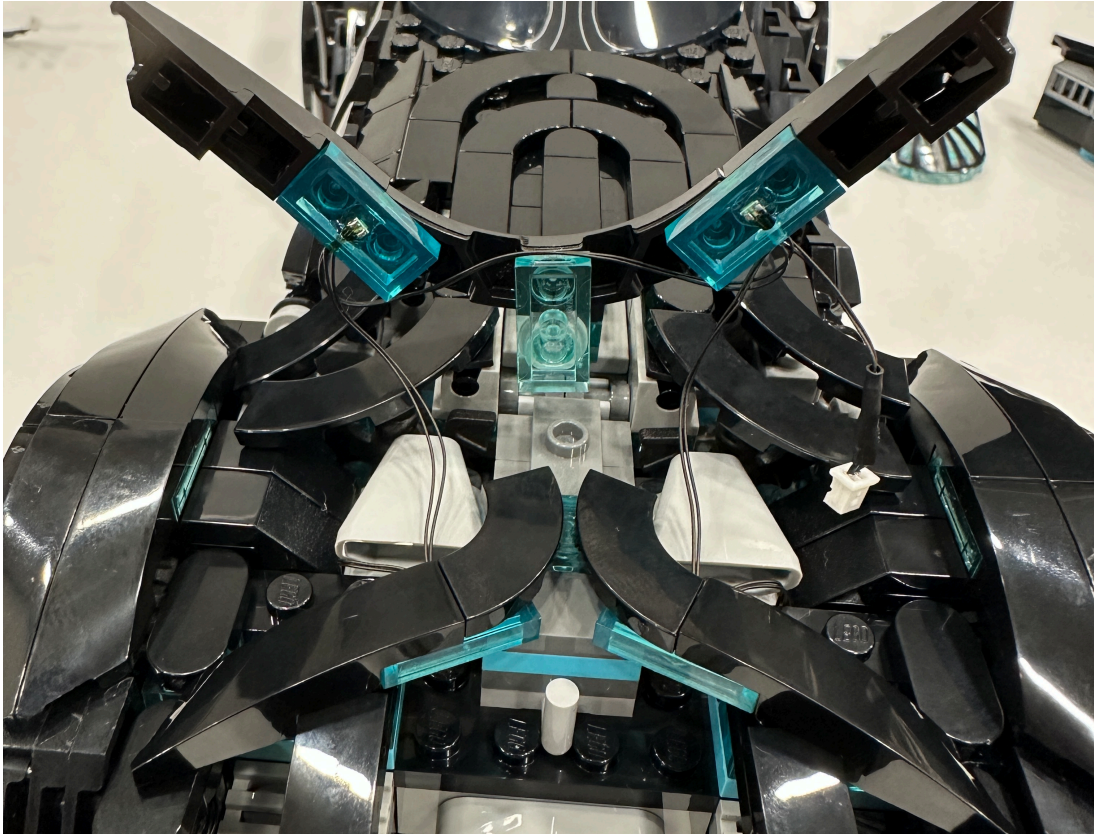

Restore the parts surrounding the headlights

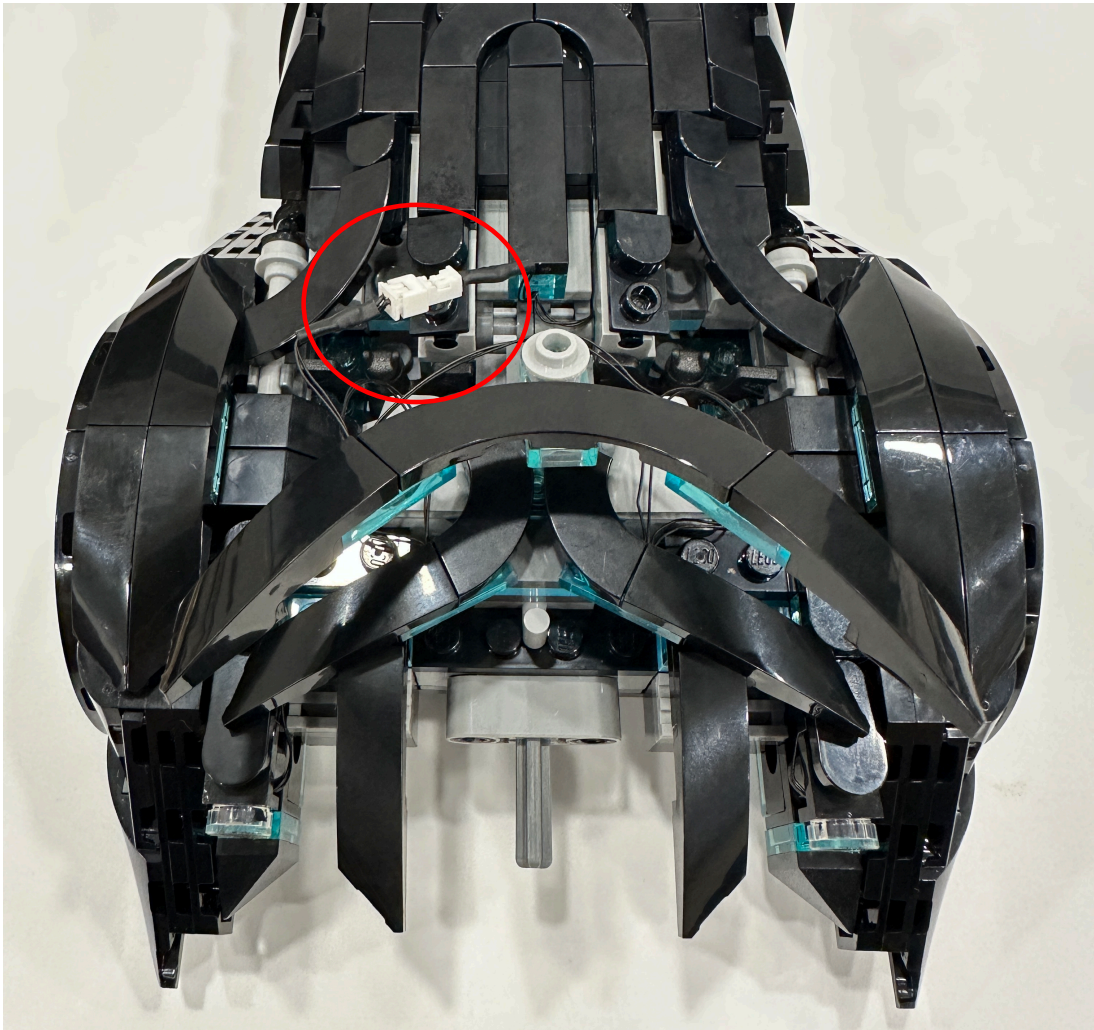

Replace the blue 1x2 plates of the shown parts by the lighting plates

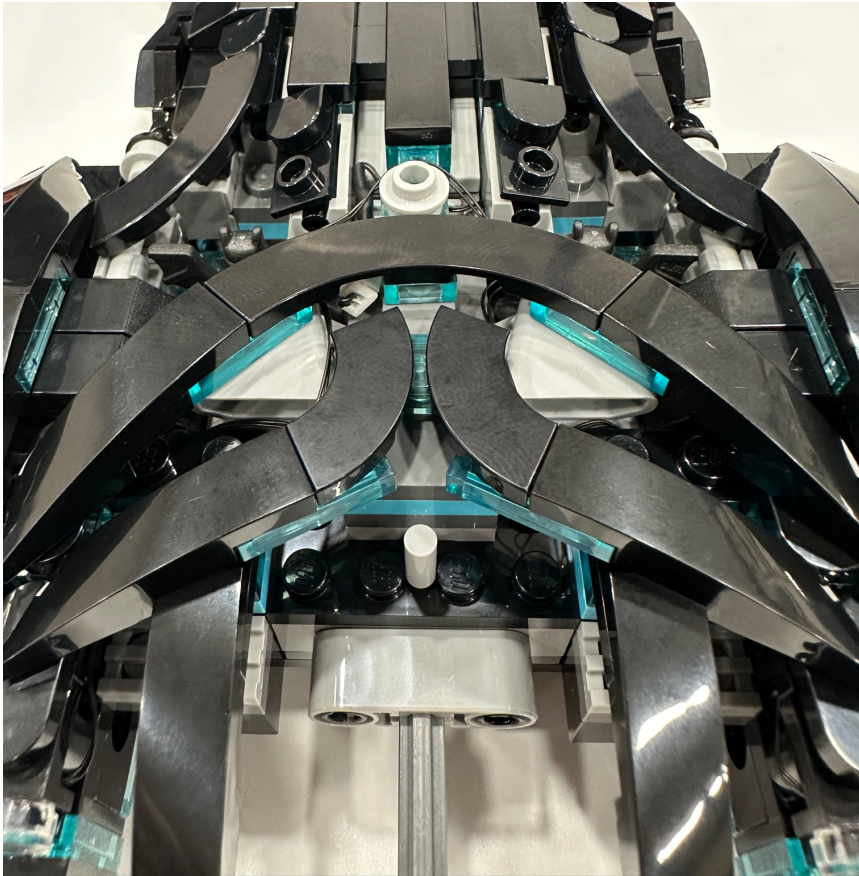

Then replace the remain two plates by the lighting plates

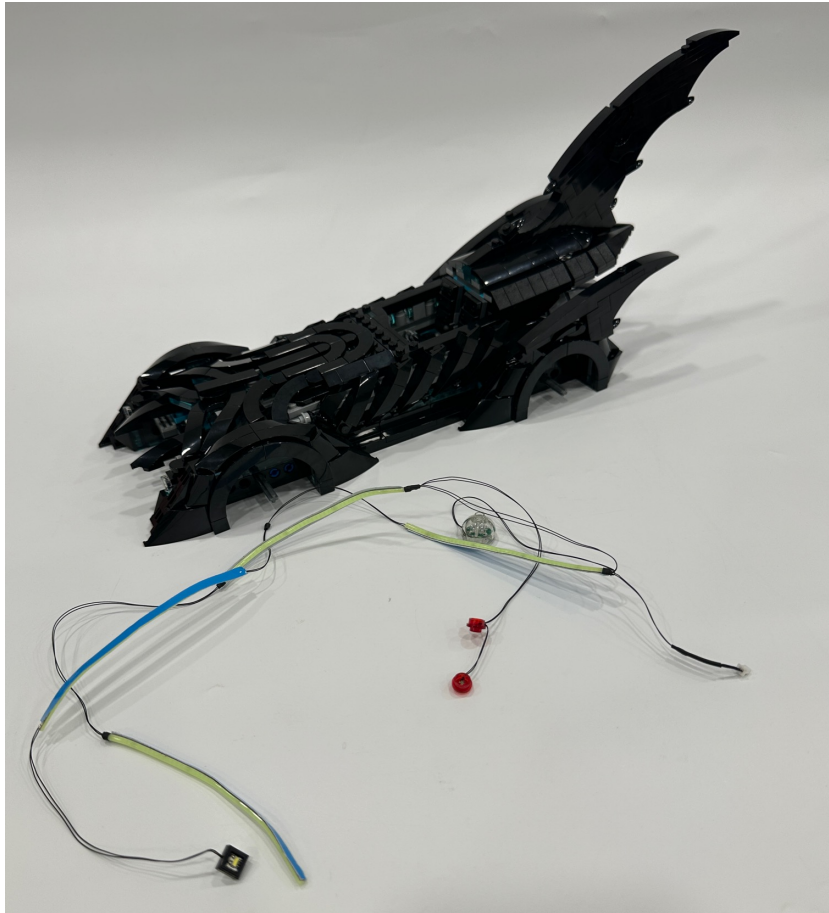

Connect the plug with lighting part A before putting the black part back

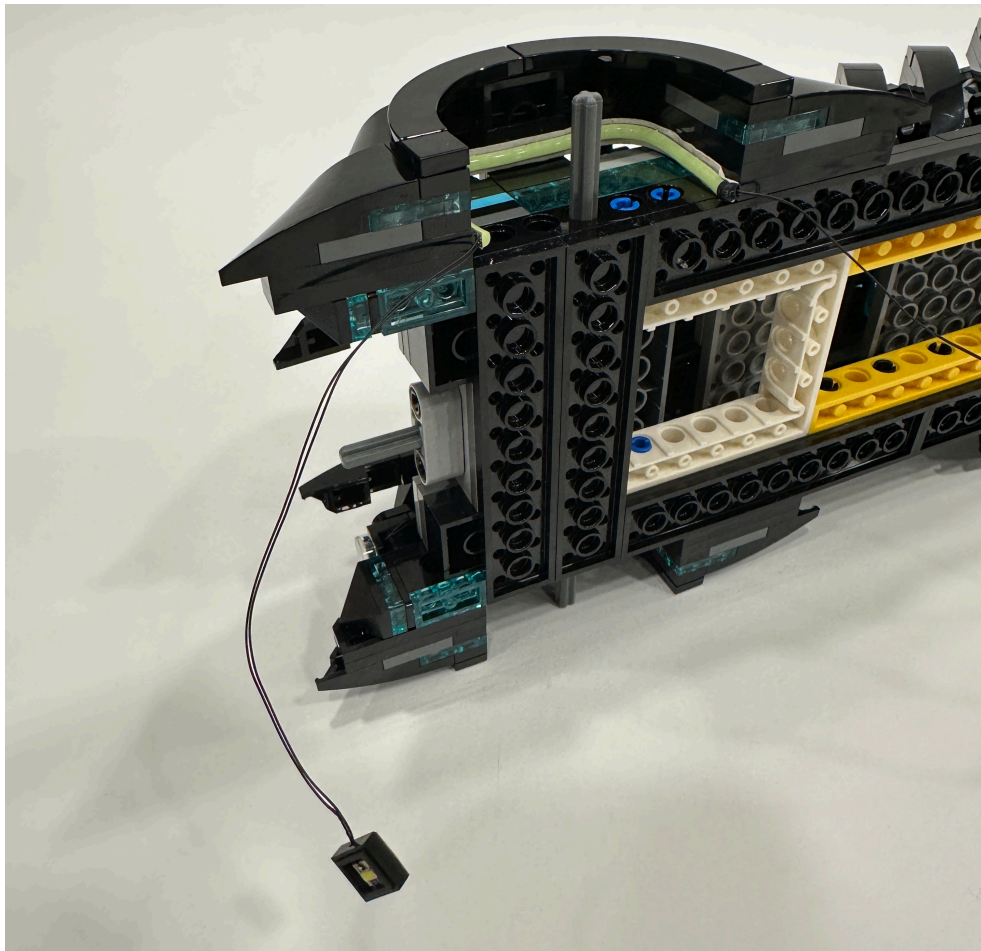

The connected plugs would be covered by the black tile then restore all the remain parts

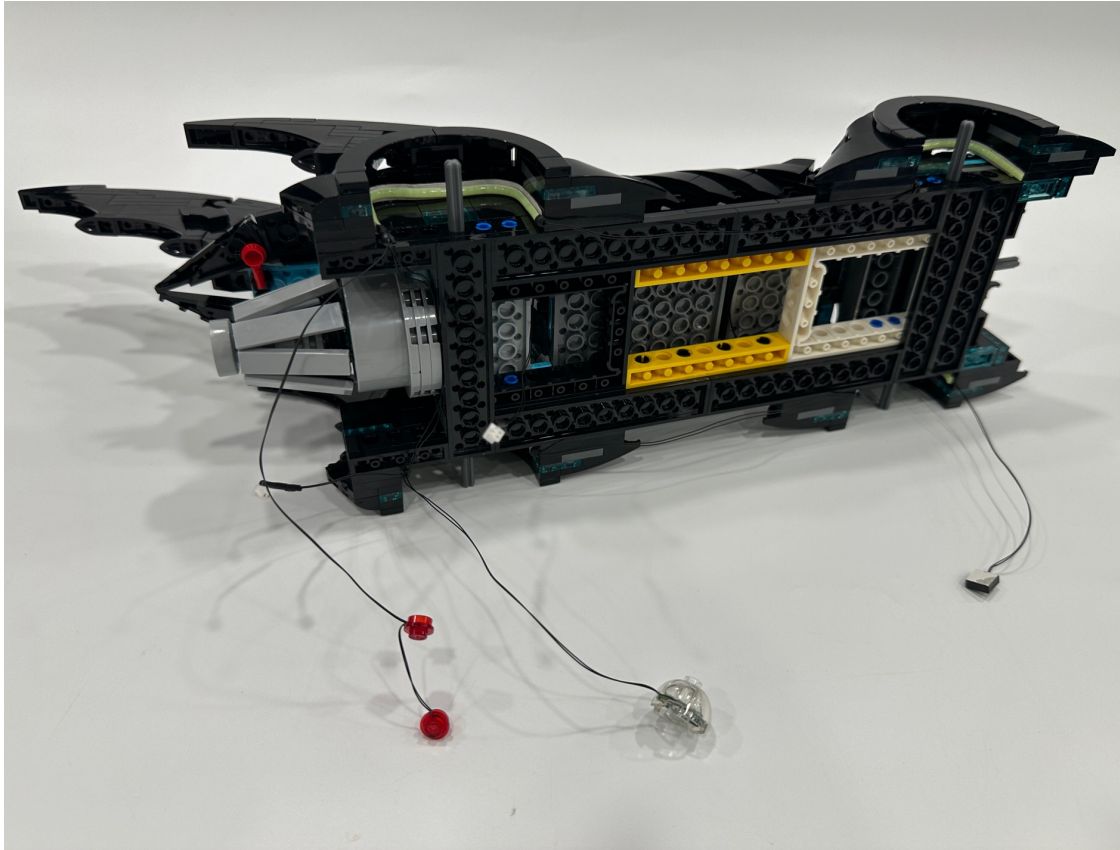

Get lighting part C, remove the the wheels from the car

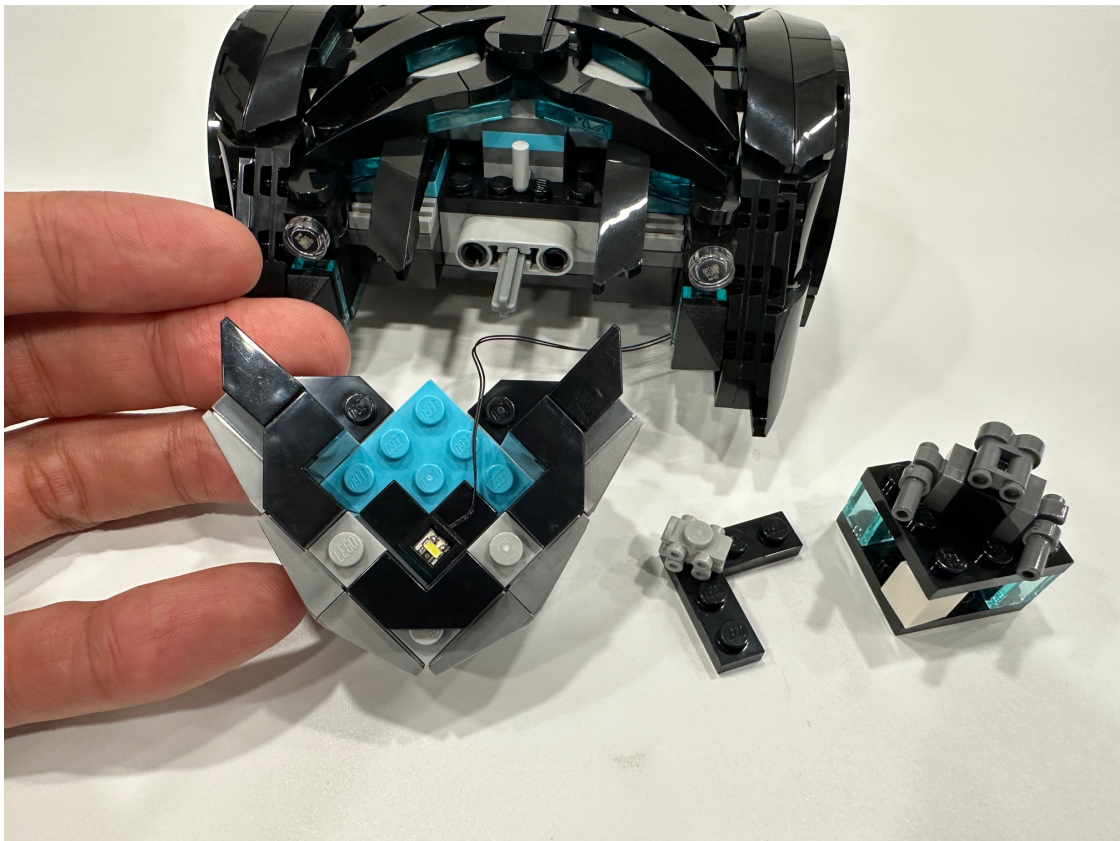

Stick the led strip with lighting tile attached under the front wheel and leave the lighting tile at front

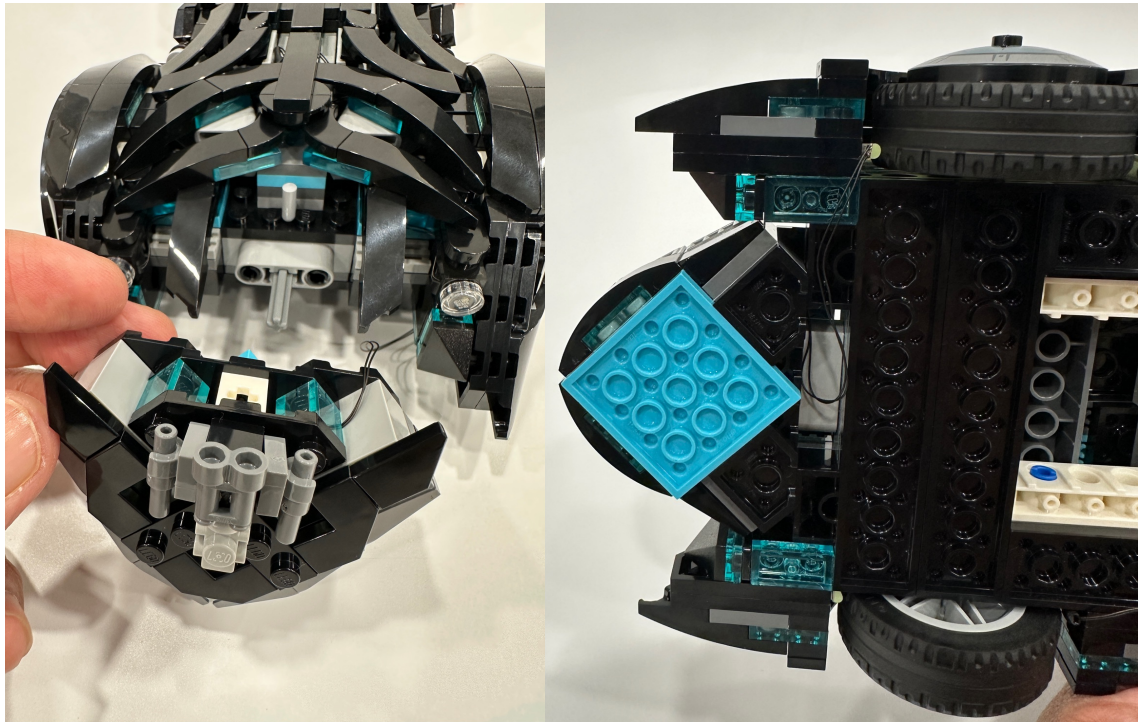

Then stick the remain three led strips and place the remain parts in the rear side

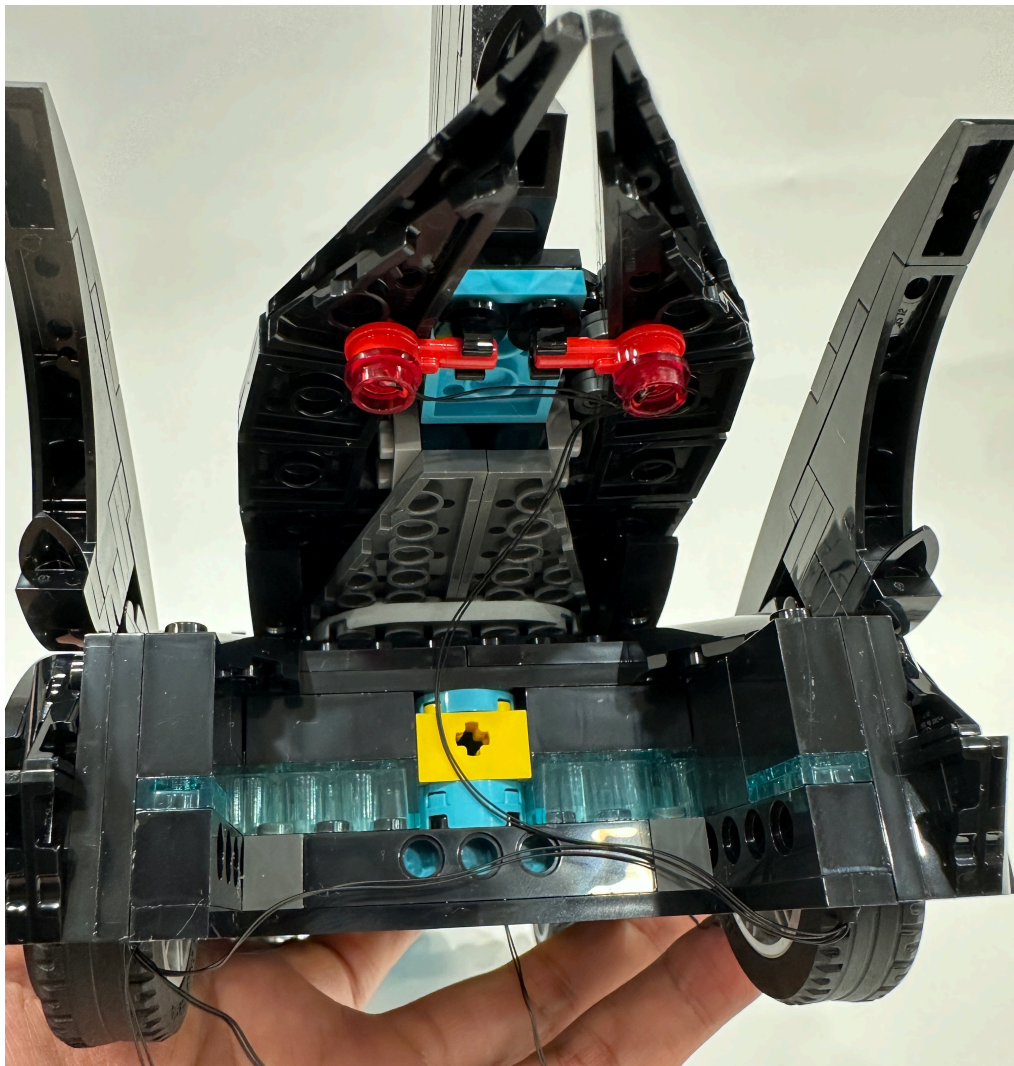

Detach the head and stick the lighting tile at the shown spot

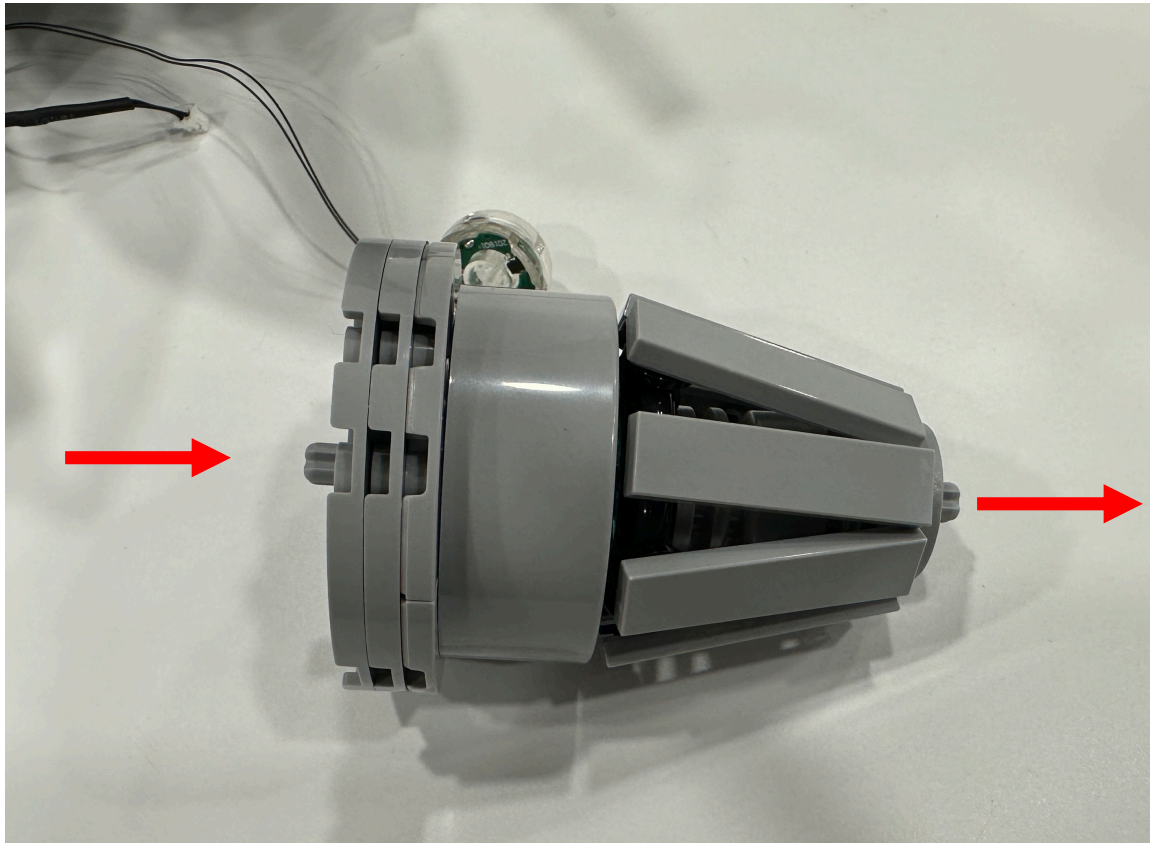

Restore the head then put it back to the car

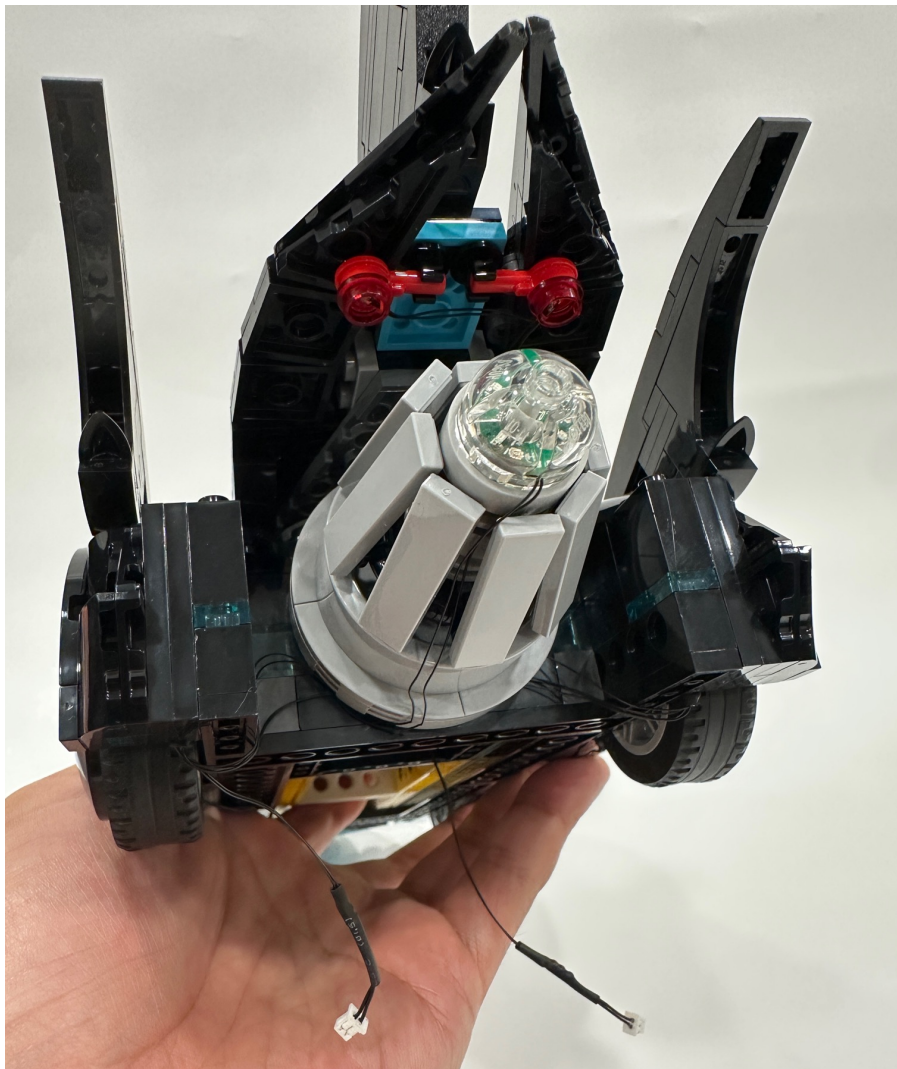

At the back, assemble the red lighting red plates as shown

Push the stick from the bottom of the grey part to pop up some of it at the top

Then place the clear lighting parts on it

At last, connect the plugs with USB cable to light it up
