

Lego 77984

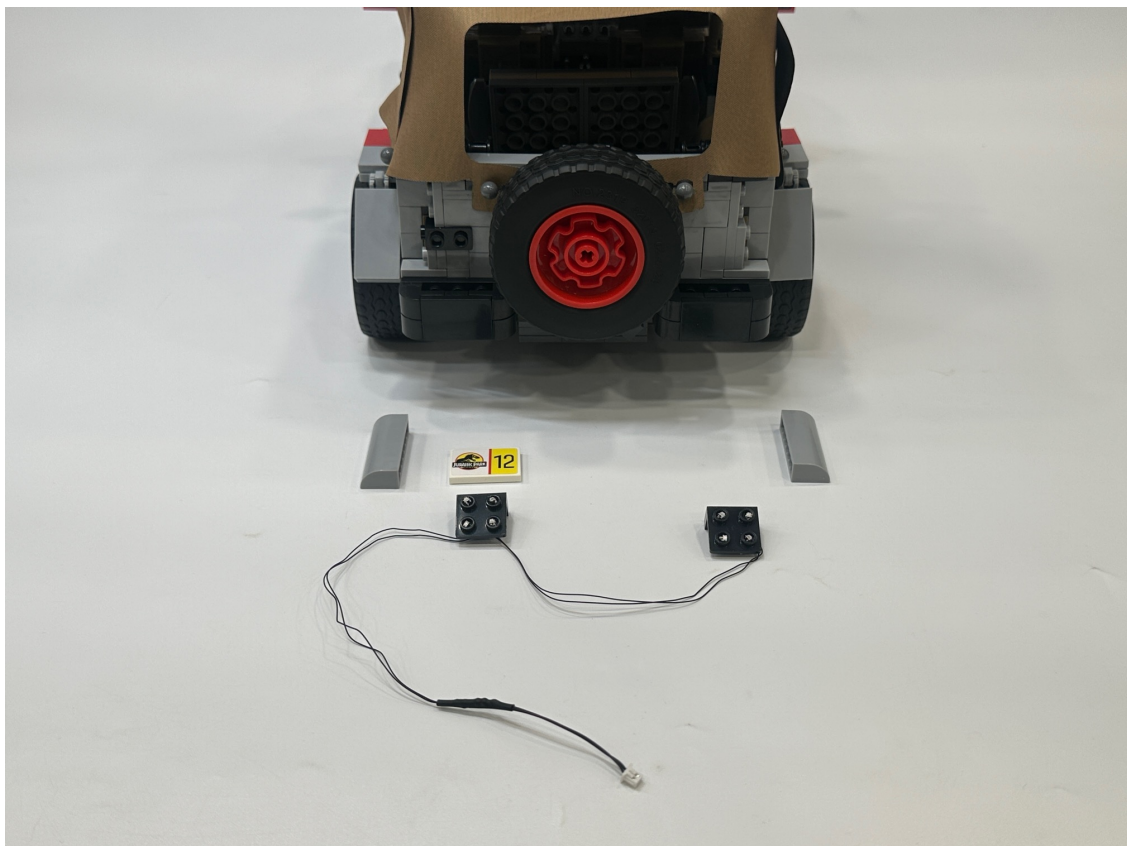

Jurassic Park Jeep Wrangler *Installation Guide*

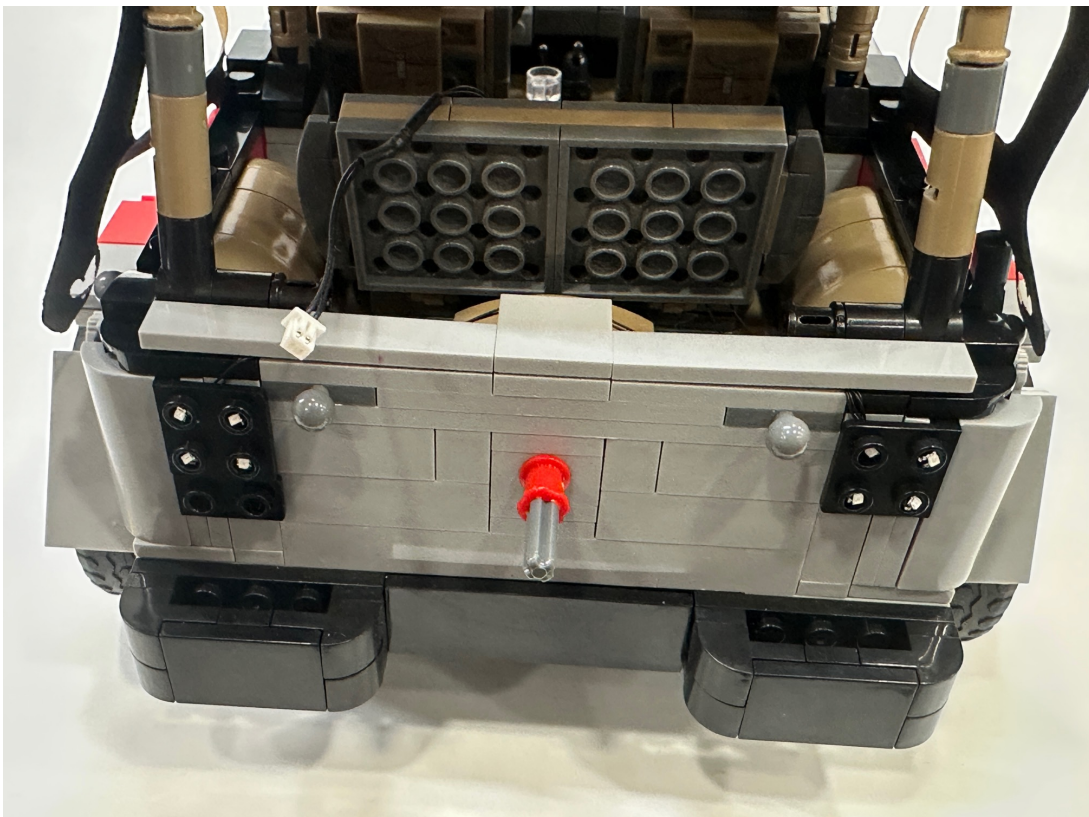

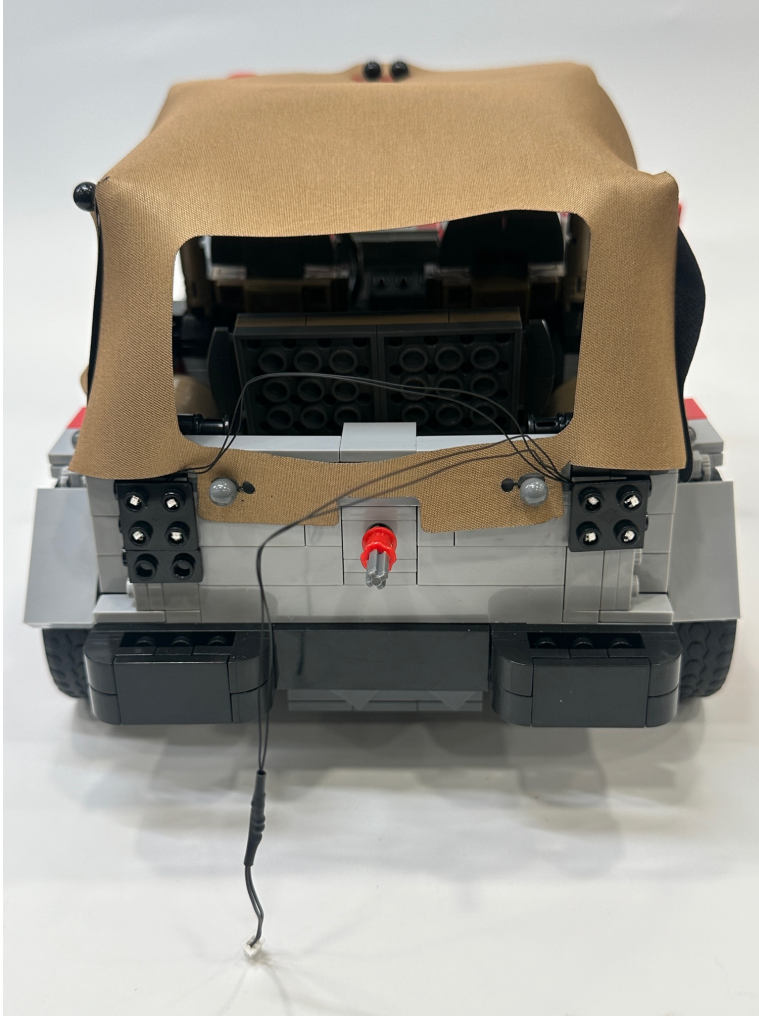

Assemble lighting part A to the rear car lights, remove the black plates with clear red and orange tiles attached and replace by lighting part A

Then hide the wire in between the lights under the tiles and place the connector inside the car

Restore the tiles and everything at the back

Remove the red and clear 1x2 plates on the spot lights and replace by lighting part B

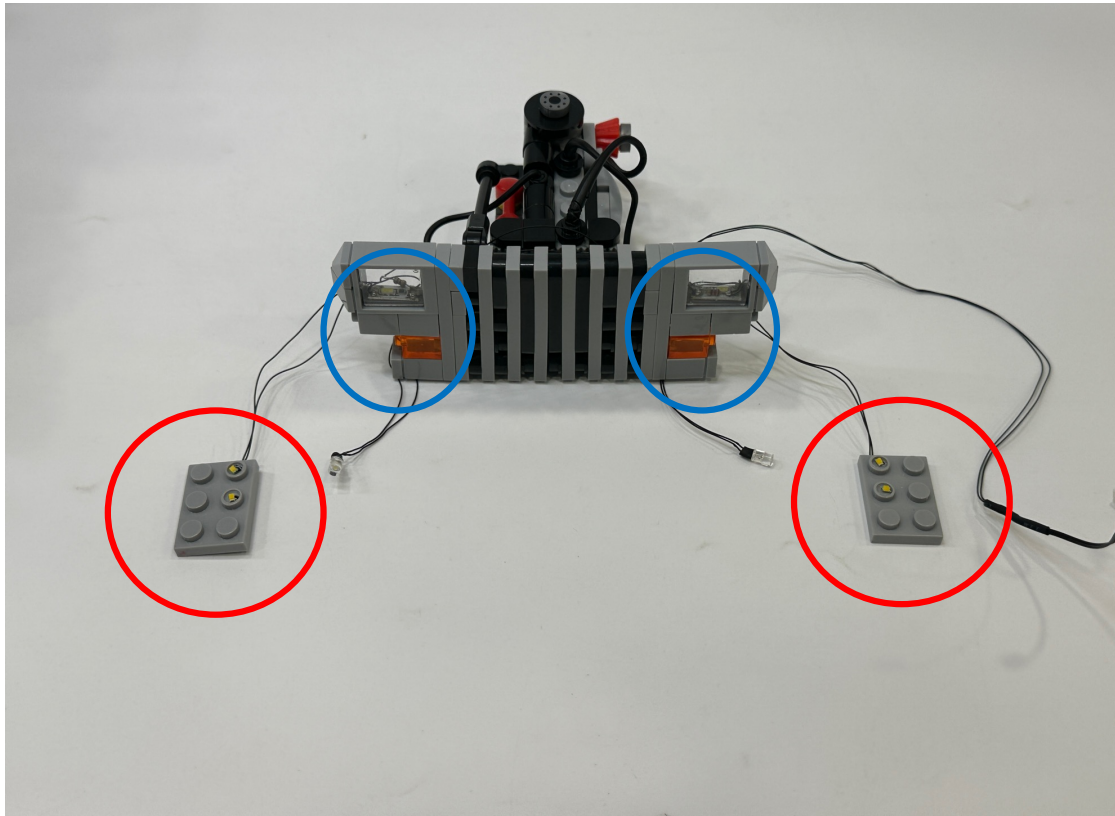

The connector would be moved inside the car with the one from lighting part C later

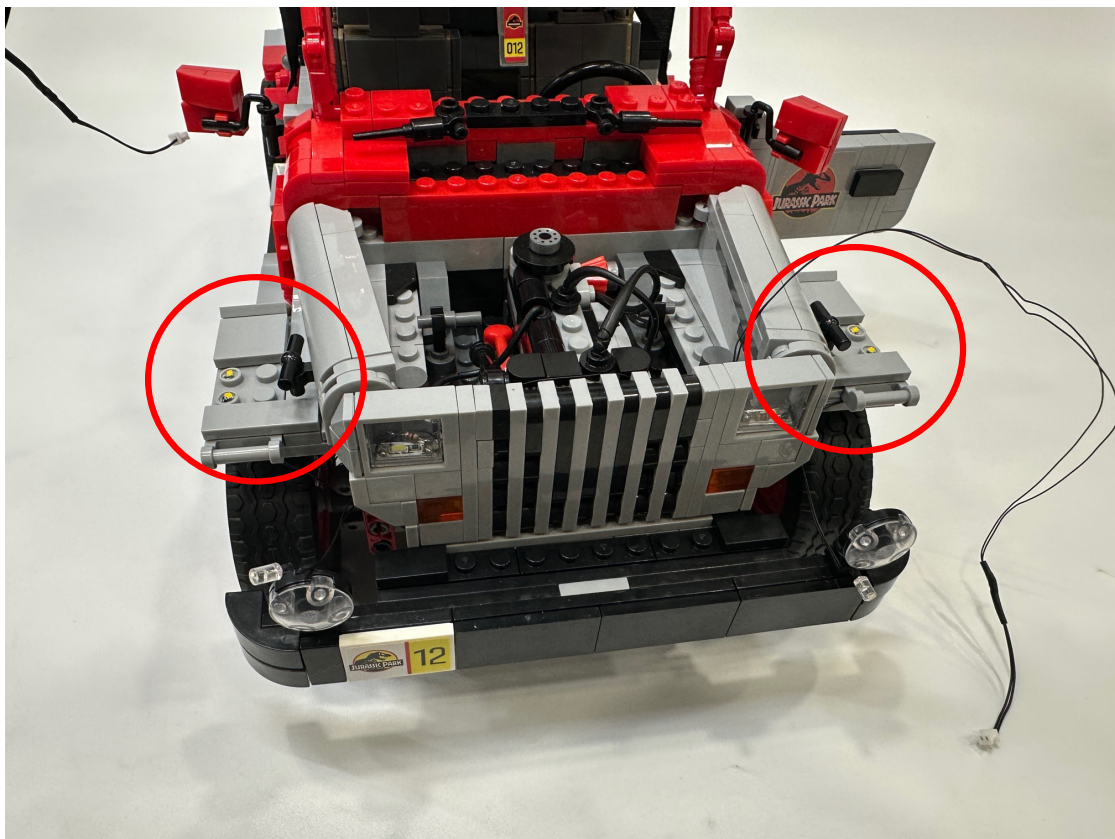

Remove the shown parts from the car before assembling lighting part C

Make sure the 2x3 lighting plates are placed on the certain position shown in red circles then replace the orange bricks by the lighting part and stick the led plate behind the clear part (blue circles)

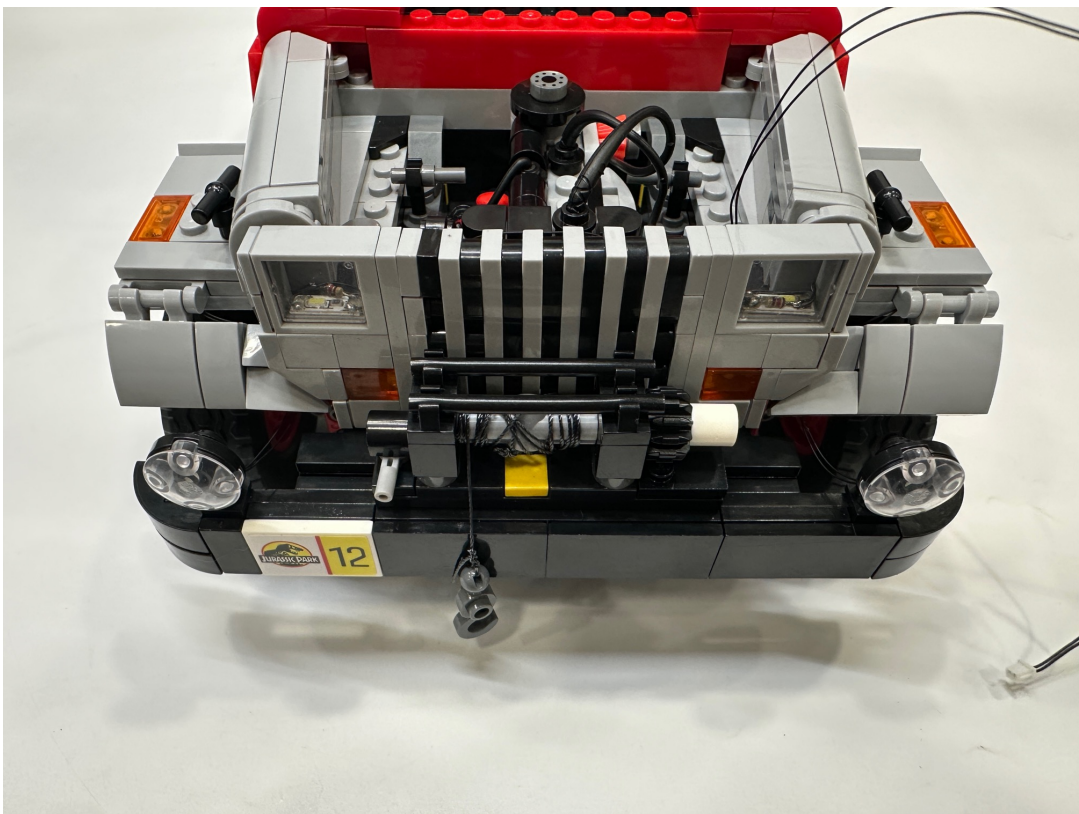

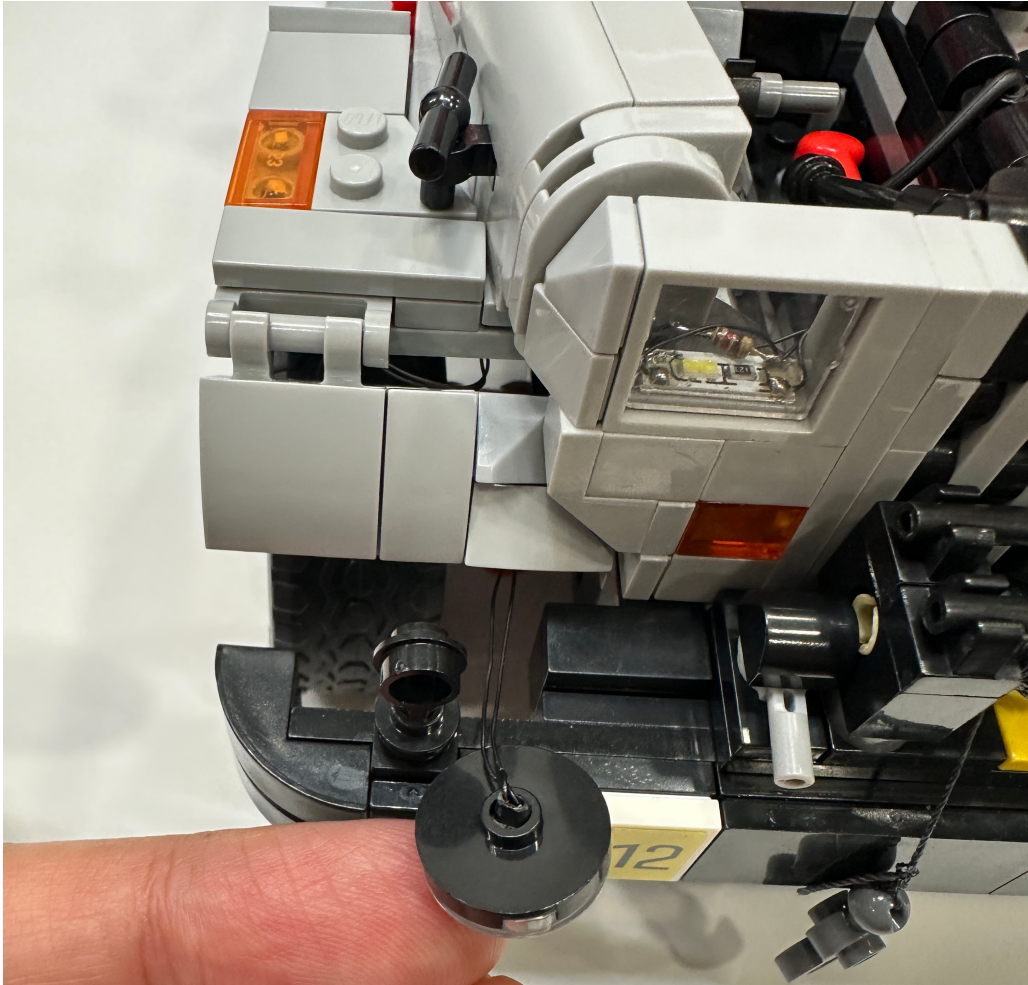

Restore the front bumper to the car and replace the 2x3 plates shown in red circle

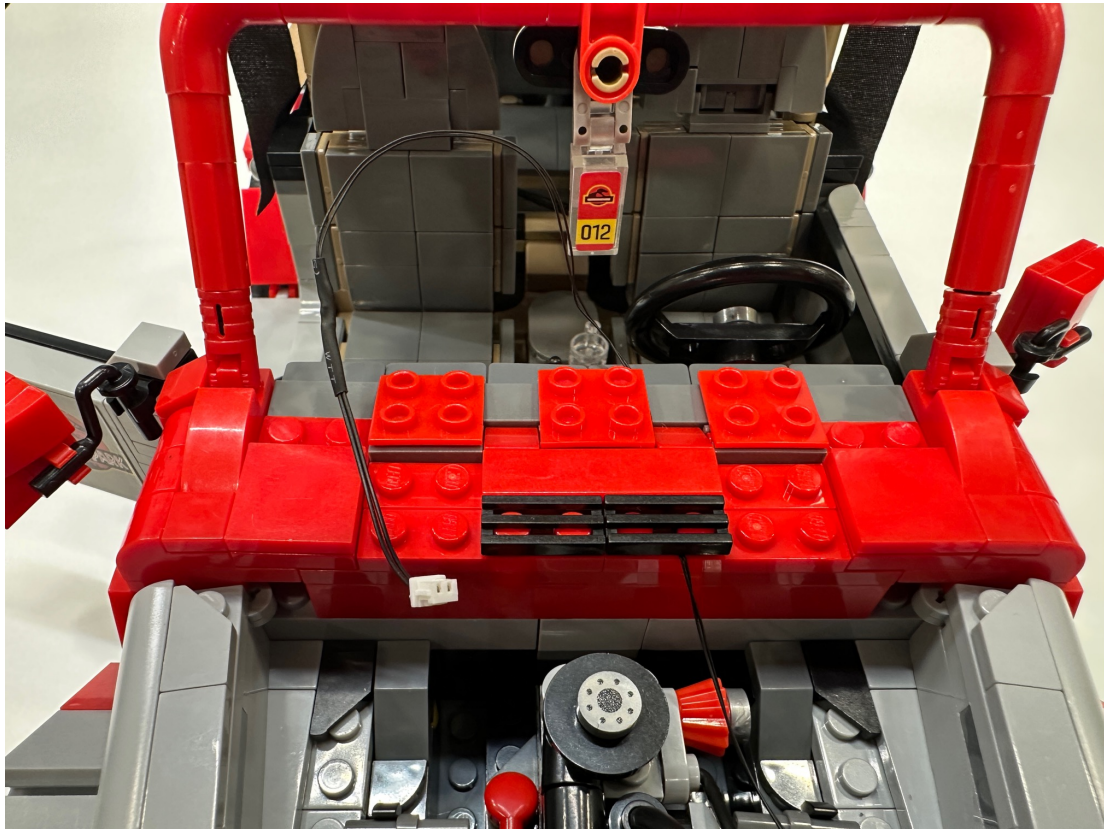

The wire of the lighting plate would be hidden under the tile in red circle

Place the led bulb inside the fog lights then lighting part C is finished

For the connector, move it inside the car and place the wire under the red parts then restore the front cover and the windshield

At last, gather all three connectors and you may choose to power up by USB or battery case, the battery case can be placed inside the car
