

Lego 42206

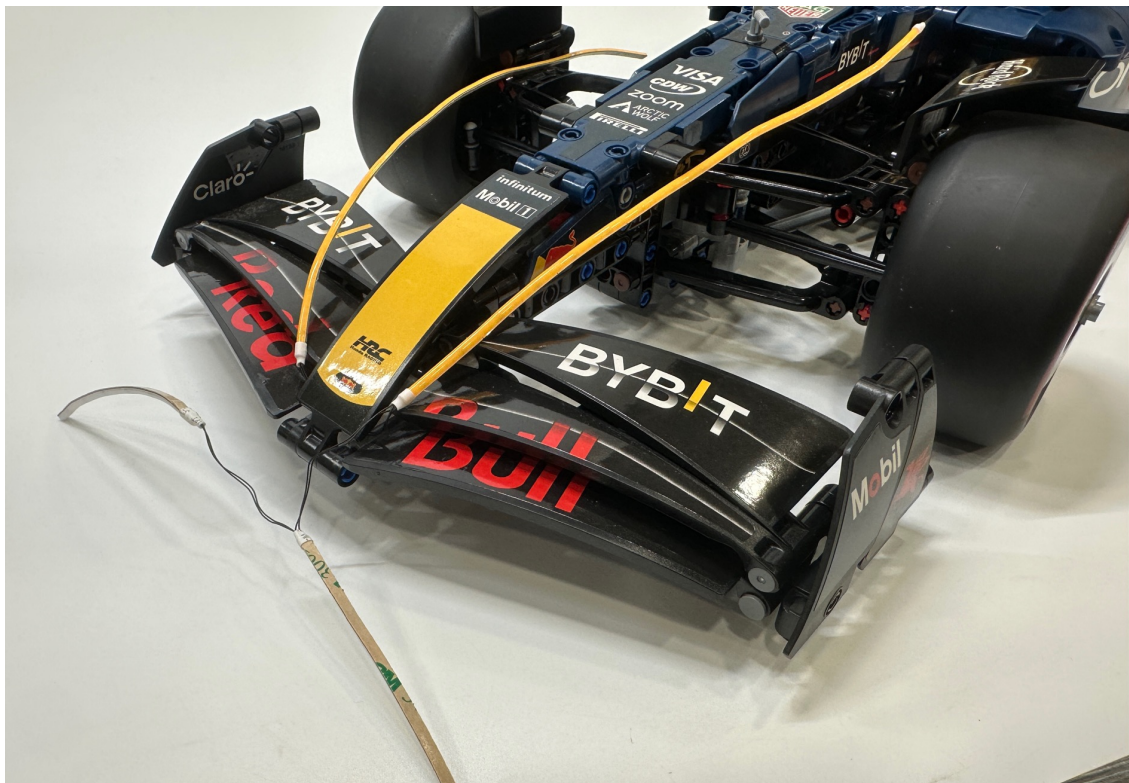

Oracle Red Bull Racing RB20 F1

Installation Guide

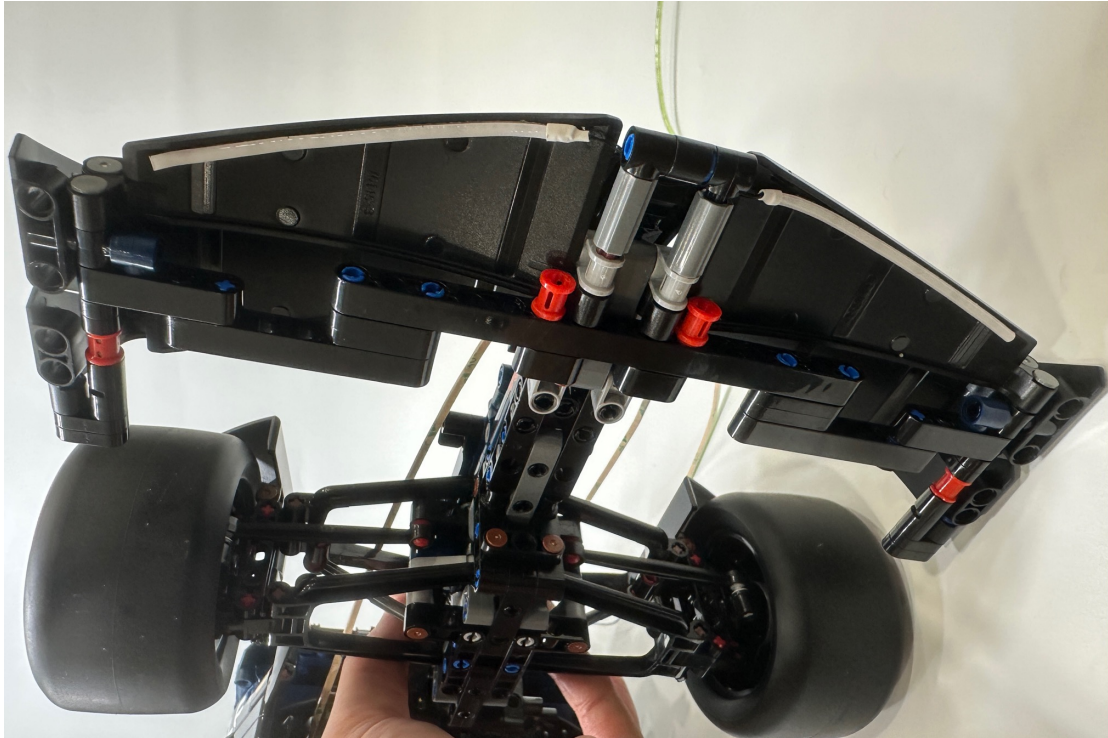

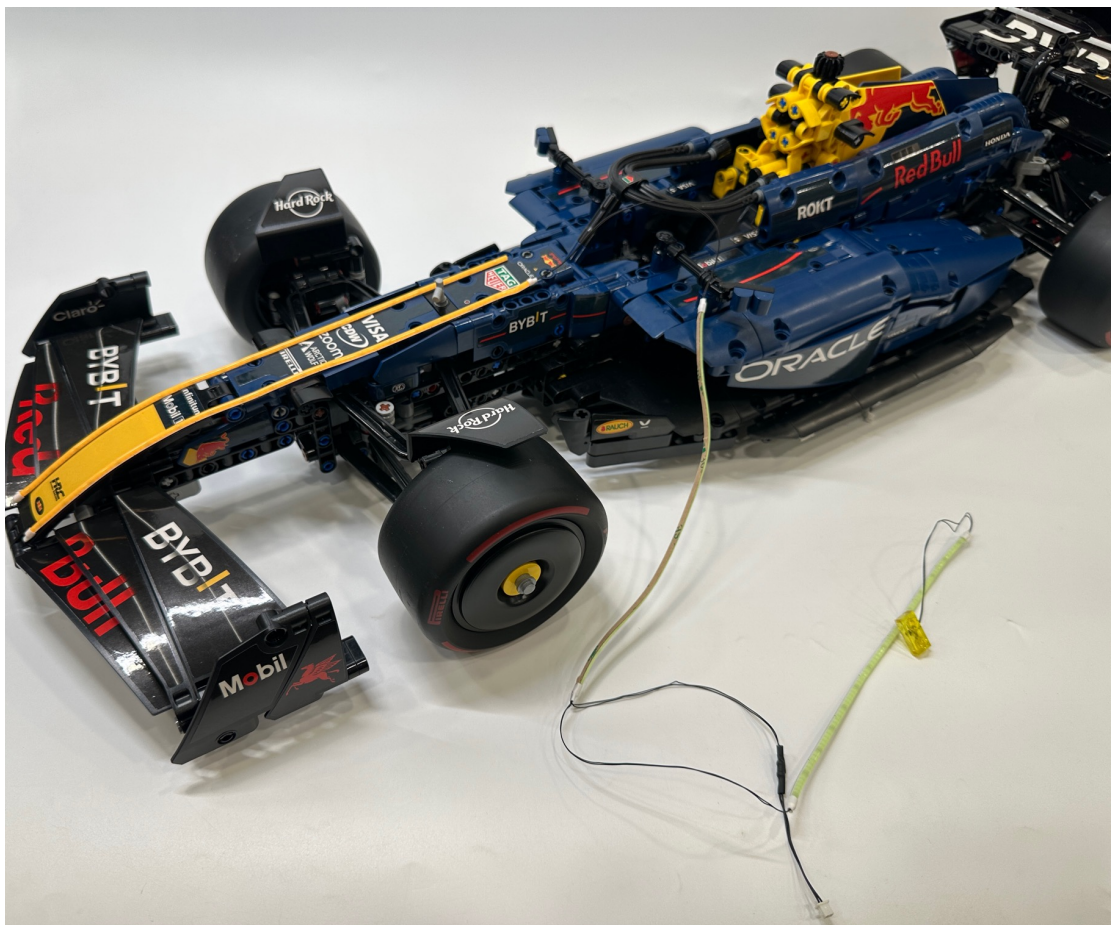

Take the shown led strips of lighting part A and stick on the front side

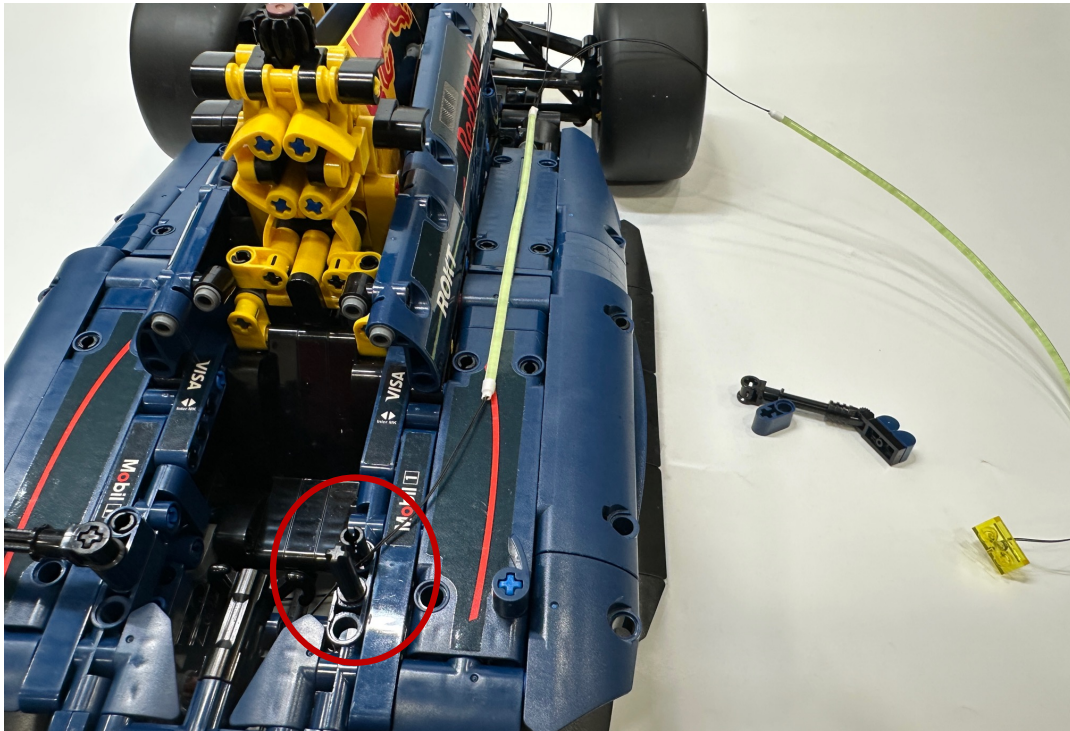

Stick the short strips from last step under the bumper

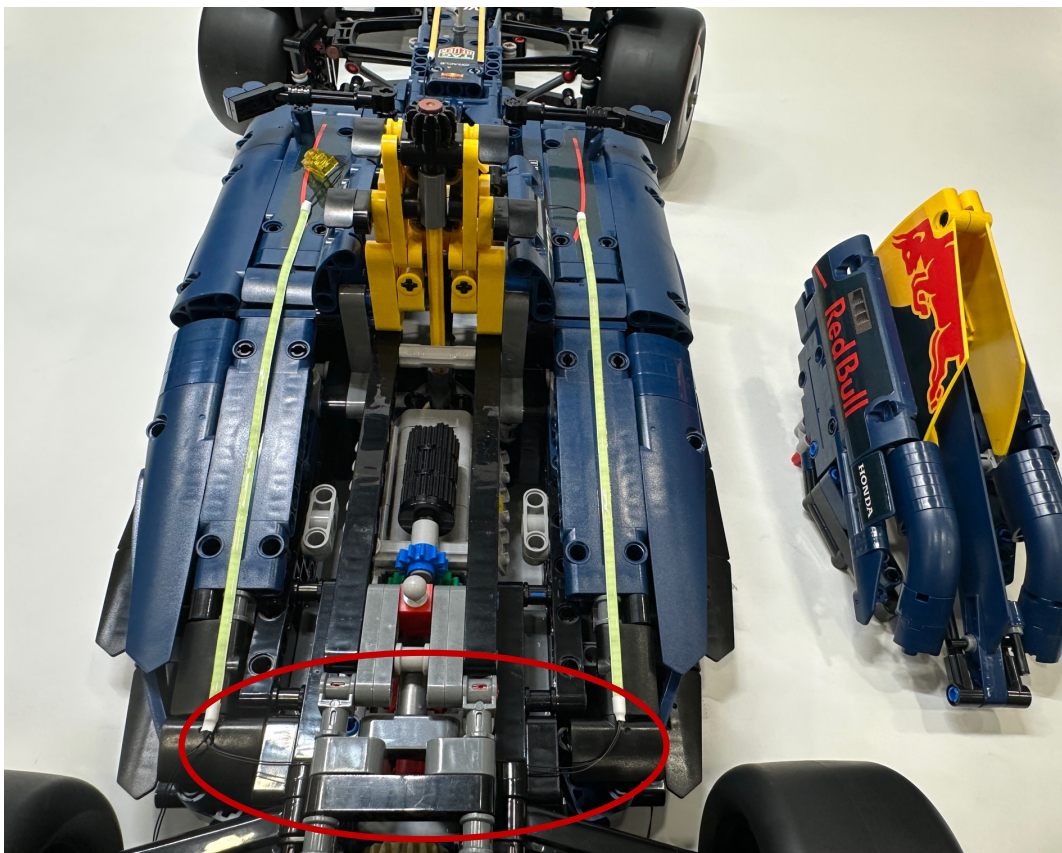

Stick the long strips on the head

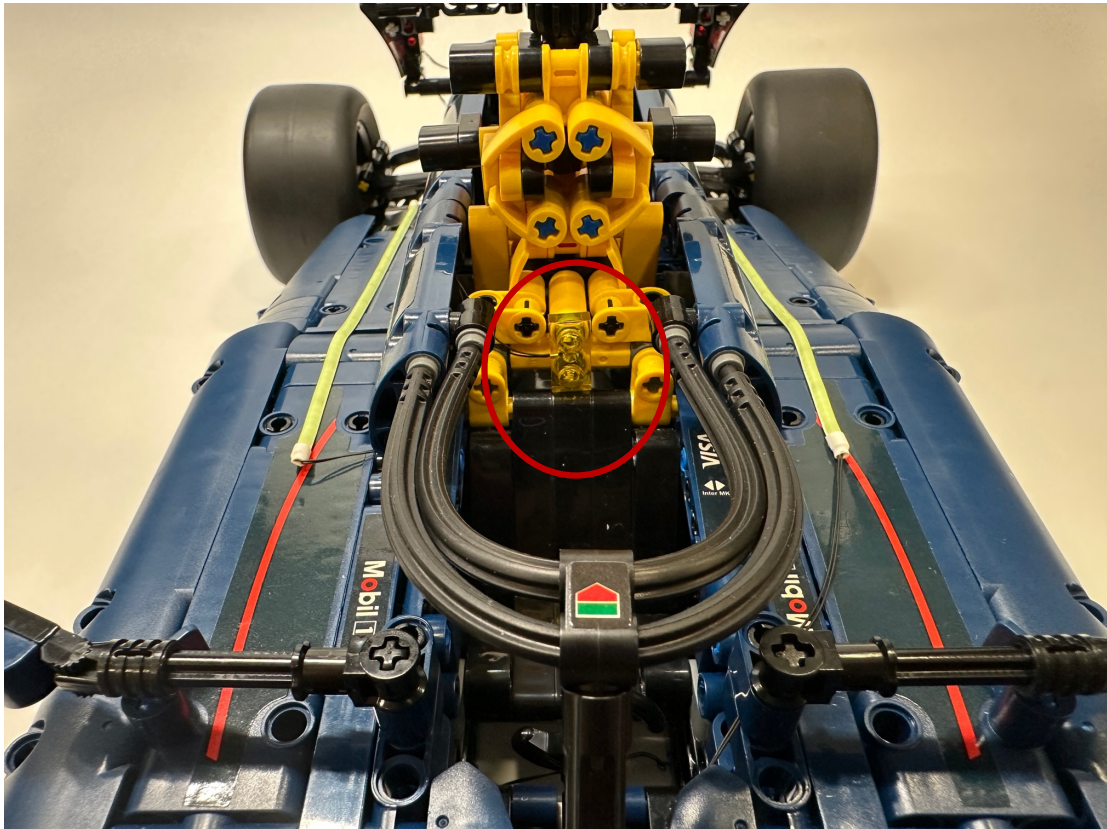

Stick the blue led strip on the rear side, place the wire in between the black parts shown in red circle

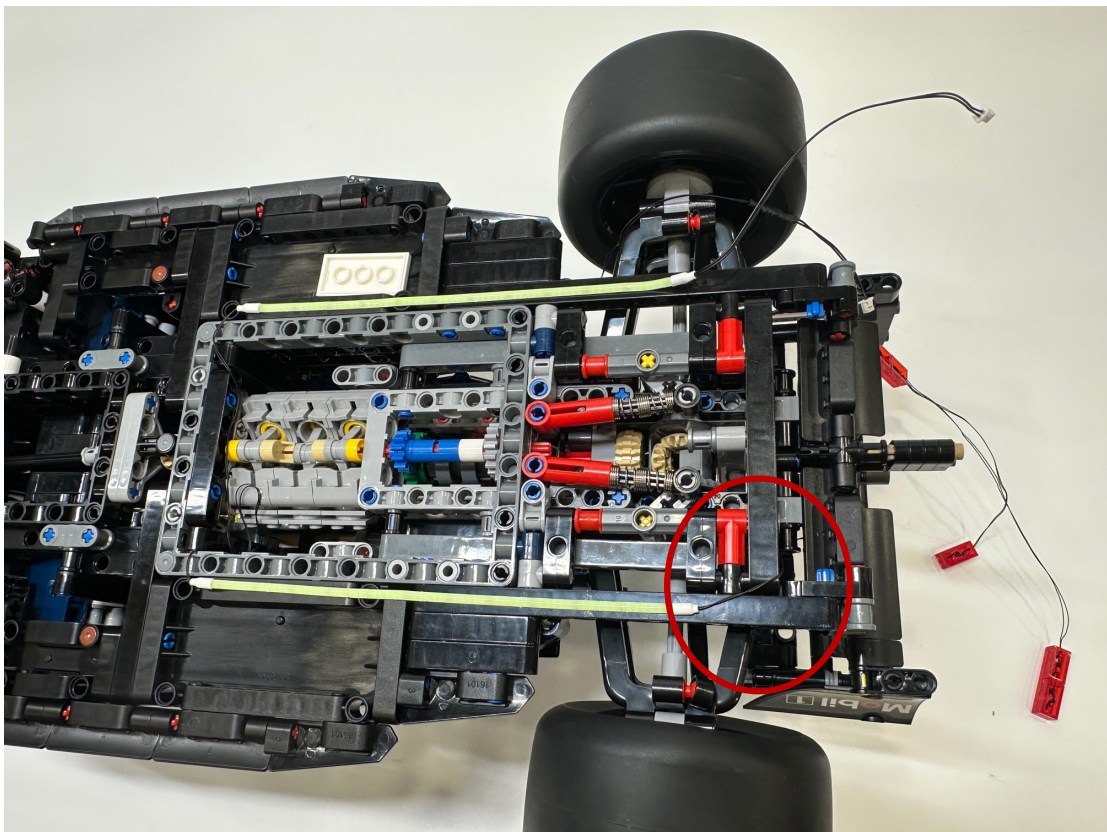

Turn around the car, remove the engine cover and get the other led strip through the gap to the other side and stick it

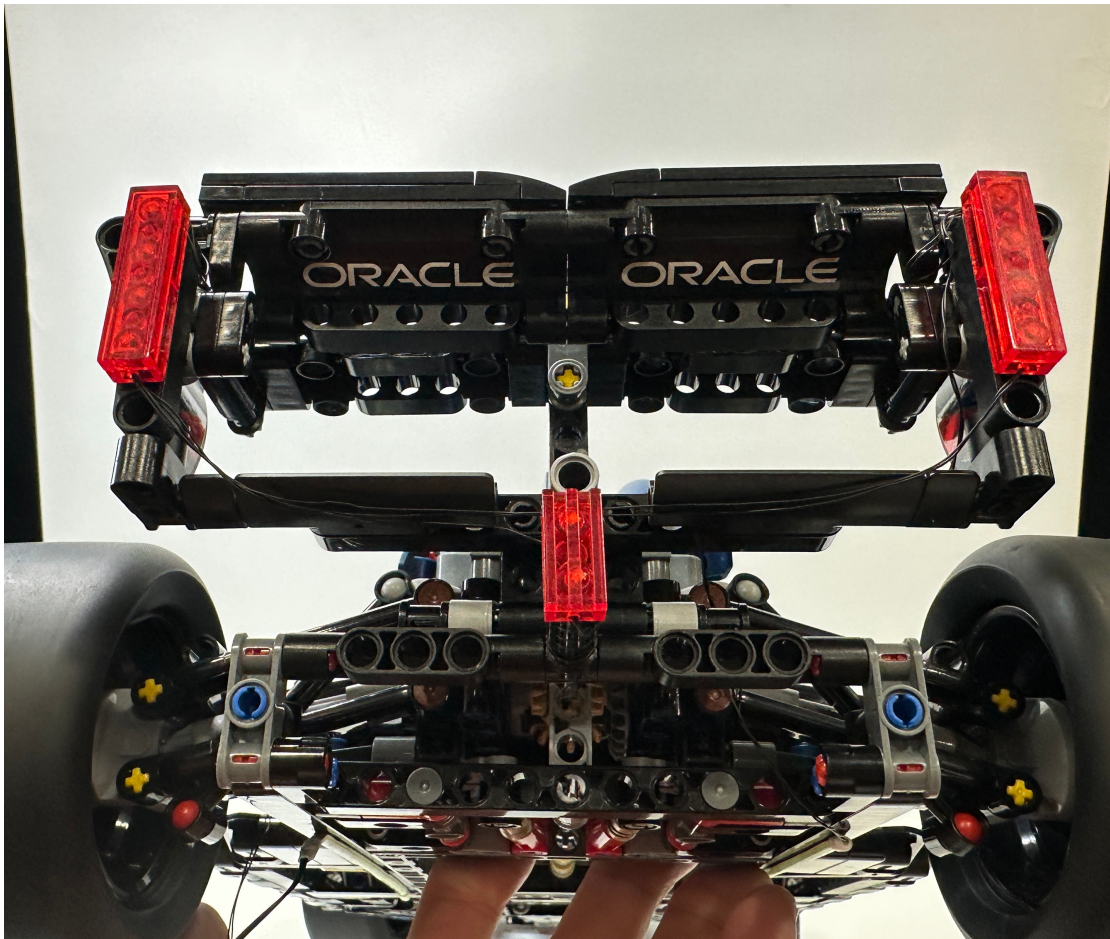

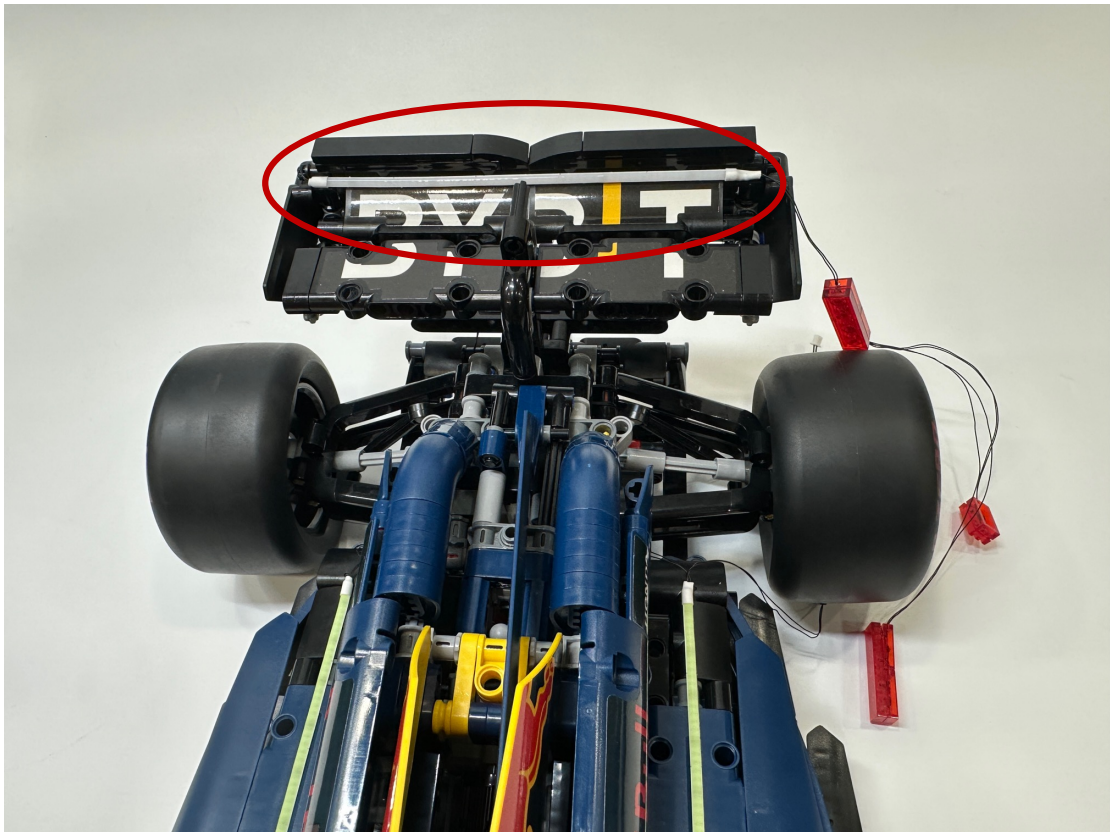

Assemble the yellow 1x2 plate shown in the red circle

Take lighting part B and stick the led strips under the car and get the remain lighting parts to the rear spoiler by the hole shown in red circle

Stick the led strip on the spoiler and replace the brake lights by the lighting parts

At last, gather the two connectors at the bottom of the car and connect with either USB cable or the battery case to power up
