Pikachu And Poke Ball *Installation Guide*

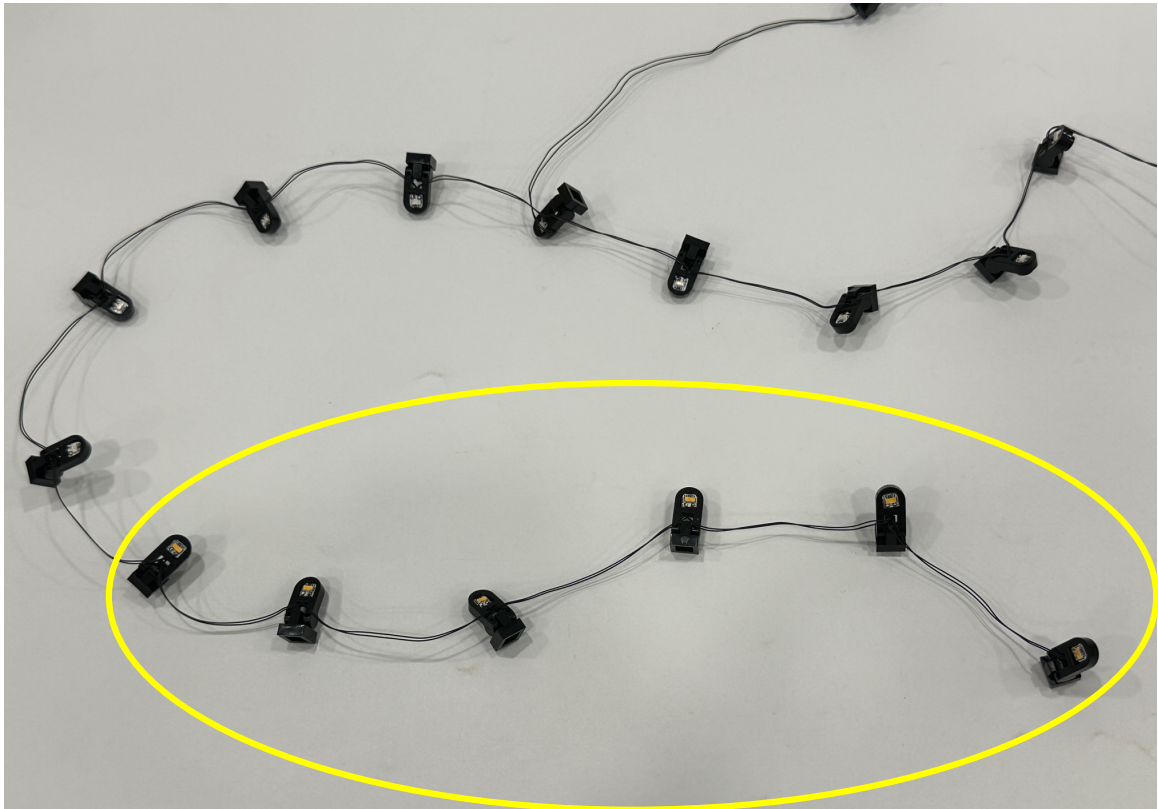

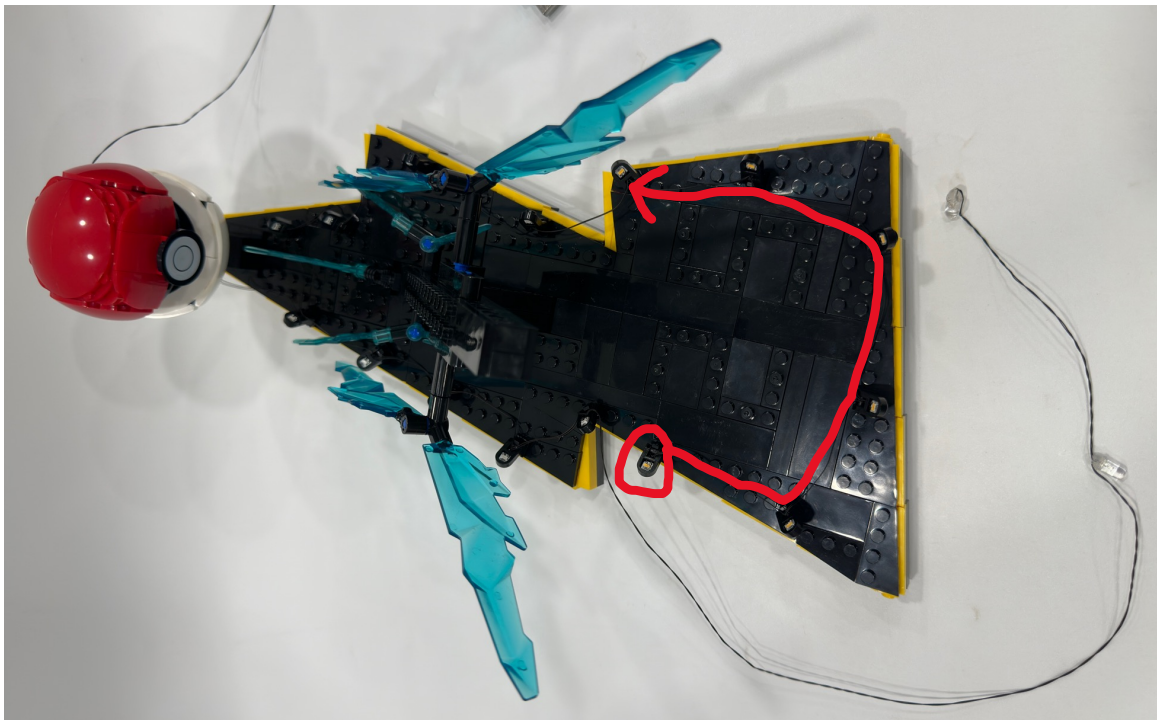

Detach the poke ball and Pikachu from the stand first

Take the lighting kit, be noticed that the color of the lights shown in the picture below are different, the one 6pcs at the end are yellow lights and the rest are blue lights (you can tell the difference by the color of the led)

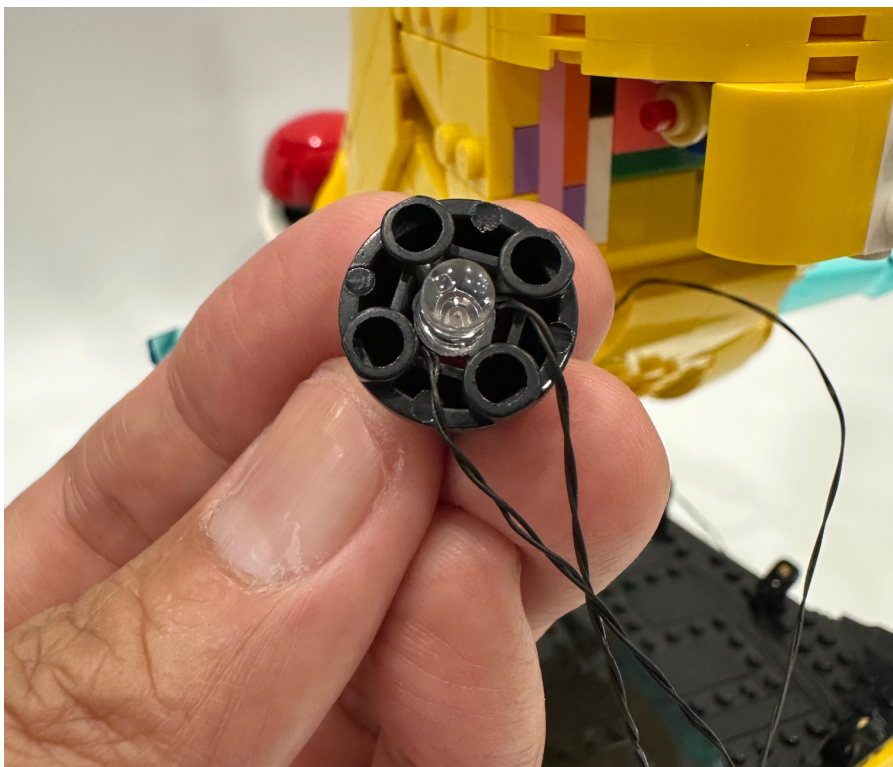

Now assemble the lights on the base, starting from the light at the end shown in red circle assemble the yellow lights around the front side of the base then assemble the blue lights evenly around the back side

Then are two led bulbs at front, assemble them to Pikachu, put the Pikachu back to the base, detach the parts on it's face and move the bulbs up to it

Take the black cone and put a bulb inside of it

Restore the cones and place the wire as shown

Restore the face and the wires would be all hidden under the parts

Now restore the 1x2 clears plates on the cones with the red tiles after that

Turn to behind and assemble the remain 1x4 lighting plates to the Poke Ball
